Selfkant, October 3rd, 2022

In the military complaints process

of the ...

AZ. ...

is reminded that the official statements by the two assessors, Colonel iG Mielke and Lieutenant Colonel iG Suchordt, on the application for bias have not yet been transmitted to this day.

We would like to know why the official statements of these two assessors have not yet been sent and by when these statements can be expected to be received.

It should also be mentioned that the process of finding out about the background to the so-called corona pandemic is continuing steadily, and there are more and more indications that the Covid-19 "vaccination" agenda is (was) a worldwide military operation could.

In the article "The C-19 vaccination is a military operation" by the lawyer Viviane Fischer, which was published on October 1, 2022 on the 2020NEWS website, see:

<https://2020news.de/die-c-19-vaccination-is-a-military-operation/>

Much of what has already been presented and proven in the context of this procedure can be found again.

The claims made by Ms. Sasha Latypova during an interview on 9/30/2022 are summarized in the aforementioned article as follows (quote):

"Pharma insider and native of Ukraine Sasha Latypova [explained on September 30, 2022 in the Corona Committee](#) why she assumes the "COVID-19 vaccination" is a military operation. There is an ominous interaction and problematic collusion between the manufacturers, the global regulatory authorities and the US Department of Defense, which has led to the undermining of established control mechanisms to protect the population from defective products and at the same time exempted the manufacturers from liability. ...

Since at least 2012, the US Department of Defense has built up capacity, almost overcapacity, for the production of vaccines: millions of square meters of production capacity (e.g. at the companies Emergent Biosolutions and Ology, the latter now trading under "Resilience"), personnel, raw materials, tests, kits, production equipment, etc.

The US Department of Defense has also signed contracts for COVID-19 injections with the pharmaceutical industry that dwarf any previous pharmaceutical contract. The first contract with Pfizer was worth approximately US\$10 billion. Only the contractors used by the US Department of Defense were able to deliver the volumes ordered due to the capacities they had built up over the years.

The US Department of Defense was and is involved in the manufacturing processes, the clinical and regulatory aspects of the producers down to the last detail.

The product vials are not serialized, are shipped to the US Department of Defense (not the pharmaceutical distributor) and are even "owned by the US government" until injected.

The "COVID-19 vaccines" are expressly described as being used for "civilian and military use".

Manufacturers would not be held accountable except for "reasonable efforts".

According to Latypova, it was only these agreements between the US government and the pharmaceutical industry that made it possible to violate all applicable regulations and safety precautions.

Since the US Department of Defense sets the framework for the contracts between the pharmaceutical industry and foreign countries worldwide, the control mechanisms within the nations concerned are undermined. A central element is the manufacturer's release from liability. This will be flanked by a ban on batch or bottle testing for imported products, which amounts to a suspension of national sovereignty on these important health issues.

According to Latypova, government policy is presented worldwide as being directed against the interests of the population with a remarkable number of false claims, efforts to cover up and a targeted confusing game with a view to those who are willing to be vaccinated and those who are injured." (end of quote)

Source:

<https://2020news.de/die-c-19-vaccination-is-a-military-operation/>

It is still under investigation whether the source - Ukrainian Sasha Latypova - really is a "pharmaceutical insider" and whether her claims, as far as the US Department of Defense's alleged influence in the global Covid-19 "vaccination" campaign is concerned, are applicable.

If these allegations can be proven, then further submissions will be made in this and in parallel military complaint proceedings with corresponding evidence.

We have already acknowledged that the level of involvement of high-ranking officers and Bundeswehr resources in the overall "management" of the so-called Corona pandemic and in particular in the implementation of the Covid-19 "vaccination" campaign is highly remarkable.

The Respondent may therefore state

whether he accepted the above statements by Ms Sasha Latypova can confirm or deny based on the information available to him that

whether he himself has concluded contracts with the pharmaceutical industry in connection with the manufacture and sale of the Covid-19 injections and - if so - what the content of these contracts is,

what concrete contributions he has actually made to the implementation of the Covid-19 "vaccination" agenda in civilian populations, in particular with regard to the manufacture, storage, distribution and administration of the Covid-19 injections in civilian populations.
