**AZ: 17 / 2023**

Selfkant, March 17, 2023

**Your AZ: still unknown; Addition to my criminal complaint against all former and current members of the STIKO who have ever participated in recommending Covid-19 injections and who, due to their misleading information to the entire population, are jointly responsible for damage to the health of an unknown number of people, including death**

**For the reasons given below, these investigations must also be extended to the former Health Minister Spahn and the board members of BioNTech SE.**

Dear Prosecutors,

In order to further illustrate the systematic failure of those responsible at STIKO - and thus at the same time of the PEI and the current Federal Minister of Health Lauterbach and his predecessor Spahn - I would like to add a few explanations and notes to my criminal complaint.

**a)**

It should first be recalled that the founding fathers and mothers of the Basic Law stated in Article 79.3 of the Basic Law that the principles laid down in Articles 1 and 20 of the Basic Law in particular should also be unchangeable.

Against the background of the experiences with the National Socialist regime of terror, human dignity and the rule of law should never again be up for negotiation.

In its decision from 2006 on the nullity of the authorization to shoot down in the Aviation Security Act (judgment of February 15, 2006 – 1 BvR 357/05), the BVerfG decided that it is not compatible with the fundamental right to life and the guarantee of human dignity, "as far

as the deployment people on board the aircraft who were not involved in the use of force are affected. These would be treated as mere objects by the state using their killing as a means to save others; they are thereby denied the value that is due to man for his own sake."

Source.

[https://www.bundesverfassungsgericht.de/SharedDocs/Press\\_Releases/DE/2006/bvg06-011.html](https://www.bundesverfassungsgericht.de/SharedDocs/Press_Releases/DE/2006/bvg06-011.html)

Consequently, nobody can be forced to sacrifice his own life, especially not if the alleged savior is not a "vaccination" but a genetic intervention and - as explained - is demonstrably ineffective or even negatively effective.

However, the Covid-19 injections are - as already mentioned - undeniably highly dangerous, since the number and severity of their side effects are unparalleled in the history of medicine.

**This was only possible to this extent because the former Minister of Health Spahn with the MedBVS of May 25th, 2020 (!) actually suspended all protective mechanisms in the AMG for these completely new Covid 19 injections and Minister of Health Lauterbach this VO despite all the catastrophic data until extended at the end of 2023 (!) and has not canceled to this day, please refer:**

[https://www.bundesgesundheitsministerium.de/fileadmin/Akten/3\\_Downloads/Gesetze\\_und\\_Verordnungen/GuV/M/MedBVS.pdf](https://www.bundesgesundheitsministerium.de/fileadmin/Akten/3_Downloads/Gesetze_und_Verordnungen/GuV/M/MedBVS.pdf)

<https://www.gesetze-im-internet.de/medbvsv/BJNR614700020.html>

I only refer to two comments on the effects of this "Spahn-VO":

<https://tkp.at/2022/04/05/deutschland-aenderte-years-long-applicable-rules-for-arzneimittel-because-of-covid-impfstoffe/>

<https://norberthaering.de/news/medbvsv/>

Politicians have not only - contrary to Art. 7 S. 2 IPbürgR - exerted maximum pressure on people in various forms, which can only be qualified as coercion in office so that they can miss a highly experimental Covid-19 injection.

If you have forgotten this pressure, which has been pushed by numerous mainstream media and politicians, just search the website

<https://ich-habe-mitmachen.de>

according to the statements documented there, which partly justify the suspicion of incitement to hatred.

Was it actually ever determined because of such statements?

And in this climate of maximum built-up public/societal pressure on all unvaccinated people, those responsible for the Spahn-VO also made sure that all the indispensable protective mechanisms for these experimental injections of all things, which even with the introduction

and monitoring of traditional vaccines with a long development period have always applied have been suspended.

If a doctor was no longer able to find printed package inserts in the vials due to this MedBVS, then such a doctor can - in my opinion - regardless of the given justification and excuse - also rely on a "supra-legal" state of emergency or on the right of self-defence according to Art. 20 para. 4 GG appointed.

According to Article 79, paragraph 3 of the Basic Law, the constitutional order within the meaning of Article 20(4) of the Basic Law indisputably includes the principles laid down in Articles 1 and 20 of the Basic Law, i.e. in particular human dignity and the rule of law.

From the case law of the Federal Constitutional Court cited above, it follows that human dignity is violated when the lives of innocent people are sacrificed.

It is the same when people are forced to sacrifice their lives and health, which - as I said - must apply all the more if this sacrifice is completely pointless because these Covid-19 injections have no relevant protective effect.

The entire Covid-19 injection agenda, in particular this unspeakable so-called SpahnVO, has trampled on the principles of the rule of law and in particular the dignity of all people, especially the dignity of the soldiers who, since November 24th, 2021, have in fact been subject to a Covid-19 injection obligation in accordance with § 17 a SG are subject. This inglorious chapter must also be dealt with.

**So when I'm asked again and again whether the former Federal Health Minister Spahn also needs to be investigated, the answer is clear:**

**This "Spahn-VO" alone embodies a targeted attack on the life and health of all people in this country.**

**This Spahn-VO was completely irresponsible from the very beginning, not only because of the already low IFR of the SARS-CoV2 virus (see meta-studies by Prof. Ioannidis, most recently: Pezzullo/Ioannidis et al., Age-stratified infection fatality rate of COVID-19 in the non-elderly population, <https://doi.org/10.1016/j.envres.2022.114655>)**

**The former Federal Minister of Health and everyone who is jointly responsible for this Spahn-VO must (especially) be held criminally responsible for it.**

With bizarre excuses such as that the talk about the alleged freedom from side effects of the Covid-19 injections was just an "exaggeration", see, among other things:

<https://www.alexander-wallach.de/gesellschaft/das-zdf-laesst-karl-lauterbach-fallen-eine-investigativ-reportage- wird-zum-separationsgrund>

it is not done anyway.

Again:

**No one should and should not be compelled to carry out such an experiment, if only because of Art.**

Given the massive pressure that has been exerted - more or less directly - on all people in this country, no one can seriously claim that any human could still "voluntarily" consent to their Covid-19 injections.

The entire population in Germany was and is being systematically lied to and deceived with misleading information, insofar as it was and is claimed that the Covid 19 injections are effective and safe.

In order to avoid repetitions, I refer to my criminal complaint against the STIKO dated February 26, 2023.

On the basis of such a grossly flawed explanation, which is not in line with the statutory program of obligations under §§ 630 d and e BGB, no one in Germany could effectively consent to their Covid-19 injections.

We now know that the truth is even worse.

Those responsible at BioNTech-Pfizer have demonstrably lied and cheated during the approval process and, with Comirnaty, have thrown a product onto the market which, according to the current state of knowledge, is responsible for the deaths of millions (!) of people worldwide. The number of people whose health was severely damaged is even greater.

The serious side effects are clearly not uncommon. They even occur frequently, see for example:

[https://www.achgut.com/artikel/sind\\_schwere\\_nebeneffekten\\_sehr\\_selten\\_selten\\_oder\\_gar\\_occasional](https://www.achgut.com/artikel/sind_schwere_nebeneffekten_sehr_selten_selten_oder_gar_occasional)

All of this must be dealt with immediately and comprehensively.

There are enough experts who can take a well-founded position on this, including the non-fiction author Dr. Naomi Wolf, who spent many months delving into the data from the Pfizer registration study with a large group of experts, see:

<https://tkp.at/2022/06/03/naomi-wolf-ueber-die-ausanalyse-der-geheime-pfizer-dokumente-sorry-for-the-announcement-of-a-genocide/>

There is now also an English-language non-fiction book by Dr. Naomi Wolf before. Get this book and have it translated.

On this topic see also:

<https://tkp.at/2022/10/24/was-pfizer-wusste/>

The board members of the companies BioNTech and Pfizer are currently still at large. And they're swimming in the money that brought them record sales with Comirnaty.

As far as is known, investigations against these people are not even being considered at the moment, a criminal complaint filed by a colleague against the BioNTech board was rejected within a few days.

However, investigations into this complex of crimes must also be initiated immediately. With the following additions, this should also be very easy.

The expert Sasha Latypova, who lives in the USA, has now been able to provide evidence on the basis of original documents that the Covid 19 injections were developed and administered with the intention of causing harm.

A video with the relevant lecture by Sasha Latypova contains the following text (quote):

"While the public was sold the response to Covid as a public health event, in reality it was organized as if it were an act of war. The US government, with the Department of Defense as the prime steward, has not only been in charge of the logistics, they are running the whole thing . They even hire the contractors and negotiate with Congress on their behalf. Defense companies took over all these tasks that the pharmaceutical companies normally do. Pharmaceutical companies only acted as front organizations and received "demonstration orders." (end of quote)

**Source:**

<https://rumble.com/v289h2g-sasha-latypova-covid-19-countermeasures-evidence-of-the-intent-to-harm.html>

b)

**In particular, your agency will need to investigate what the boards of BioNTech and Pfizer knew and when.**

As an introduction to this topic, I quote parts 1 to 6 of the analysis by the expert Dr. re. nat. Sabine C. Stebel from Freiburg on the book "Lightspeed", which was written by Joe Miller "with" or with the participation of the BioNTech SE CEOs Özlem Türeci & Ugur Sahin.

Of course, humorous and sarcastic nuances and stylistic devices could not be missing, because without humor the human soul can no longer process such a cruel real satire.

Then a link to another article by this expert, from which it follows conclusively that why the modRNA vaccination based on school knowledge of the 9th/10th class could never work.

The following text quotes the only slightly abridged content of parts 1 to 6 of this series of articles, whereby I only corrected a few obvious errors (typos, etc.) and highlighted some passages (in bold):

I

**Part 1 (quote):**

"Project Lightspeed - [IRONY]Working with professionals once[/  
IRONY] Part 1

By DrBine • January 25, 2023

Normally one writes reviews for whole books. This book however

describes so much incompetence in a nutshell that I as someone who is in the field of protein engineering has to review the book chapter by chapter in order to sum up all the rookie mistakes, hubris and hubris that this book describes.

Why did I do my PhD in this field, protein folding and the knowledge of it (or rather what you don't know) studied, if then a random ignoramus designing a protein just like that, all the safety precautions in the protein Engineering ignores (because you don't even know it) and rakes in billions, while I have to look every month at how I get the money for the Compulsory health insurance levy scraped together, thanks to his incompetence too has increased.

The topic of everything that was not taken into account in protein design will be discussed later

Substack when I've managed to read and analyze this book.

With the described incompetence, as someone from the field (and there are unfortunately not many, in Germany you can count them on two hands and one of which now works at BioNTech, but doesn't seem to understand the problem either to lift) gray hair when reading this and can tolerate a maximum of 1 chapter per day. Afterwards you have stomach pains, you feel nauseous and dizzy from shaking your head.

I usually write (admittedly quite scathingly caustic) reviews of classics because the authors can't complain anymore. ...

Perhaps "Project Lightspeed" will also become a classic description of incompetence and hubris, read as a warning in later years, how NOT to read might. And if you're going to act that stupid, then you shut up and Don't publish this in book form.

=== Preface ===

Even the foreword has a few passages that I find problematic, to put it mildly.

Apart from the fact that the author comes out as a fanboy and is happy that his parents bought the soup

got sharpened, which suggests a clear bias, are the following for me

Unpleasant passages in the prologue:

"Just nine months after he put me on the BioNTech trail, I said him that the twelve-year-old company had "delivered" in a spectacular way.

Moments later, news broke of the development of a remarkable effective vaccine at the top of the Financial Times website "

i.e. the author of this book has the product of the company about which he reports about his Newspaper pushed directly! The media (in this case the NYT, not exactly a small one, regional cheese sheet without impact) have hyped the BioNTech broth right from the start, because one of their writers is a fan of the manufacturers and their house and court clerk. Similar to overpriced Apple products, people at clear mind would never use (...).

"As a result, my sketches of people and places occasionally bulge Third Party Descriptions. The memories of a difficult year were sometimes inevitably incomplete and by those involved in the same events dates and times given are occasionally contradictory. Wherever possible, I have independently verified the facts, but my account of some events is based on the best possible memories of a few observers."

Data in this book should generally be treated with caution at first, until you don't Documentation has to support this, should one have any described

Wanting to take incompetence to court. Clever.... Whether this passage is inside so that you can't pin them down to dates because, as described in the foreword, contradictory and not super accurate, I can't say. But do the presentation of the rest to something to be taken with a pinch of salt and potentially to a fictional book. Therefore, dear lawyers... I am reviewing a fictional novel based on real events. Similarities to living persons are possibly purely coincidental.

"Some place names and identifiers were removed at the request of the security services, designed to protect BioNTech and its suppliers from current threats or omitted. For the same reason, other parts of the supply chain have not been described in detail. None of this detracts from the truth of the story in any way Wise demolition."

I do not think so! When you write a non-fiction book, you can't just tell facts change. Why do they keep suppliers secret? That's already very suspect in the Introduction, especially since some of the suppliers are well known from the EMA and FDA data, such as: Acuitas[i], Merck[ii], Evonick[iii], and Polymum[iv]. It is also no secret that they work together with Rentschler[v].

Incidentally, Ugur is referred to as a professor of immunology. Then how can it be that he doesn't even know Immunobio at intermediate level? (I will too write another substack).

What do we actually know about the previous company Ganymede, which was responsible for so much

Coal was traded to Astellas[vi]? Did that go clean? Why was it sold? What was going on then? Why start a new company when the old one was successful? questions upon questions.

=== Prologue ===

The style of the car is cranky dime-stick blubber. Full of useless adjectives that contribute nothing to the content and convey no informational value. Additionally shares he unfortunately Charles Dickens' love of describing clothes what I love annoyed at Dickens. I don't care what people wear as long as they're not naked run around.

The prologue starts off with a bunch of lies that make you wonder how it is possible to fit such a density of lies into so little text, that is almost art:

p. 13 "who received the extensively tested and approved vaccine against a virus which had already cost the lives of 1.5 million people. It was eleven months The world is as powerless against Covid-19 as it is against the Spanish flu one hundred years,"

How many lies can you pack into 1.5 sentences? Astonishing. I count 4. Who bids more?

1. States are gradually admitting that they have massively overcounted, also Germany[vii]

2. Extensively tested? Telescoping, lack of animal testing or only minimal

So animal experiments are now considered "extensively tested"? OK, now the FDA says yes

(or was it the CDC?) that human medicines should no longer be tested on animals needs and the transferability of the results of animal experiments is also more than doubtful. But my personal opinion on "extensively tested" would be true

different.

3. The world was powerless against a normal flu epidemic, like it happens every year occurs[viii]? Unfortunately, the world was helpless against the bullshit arrangement of the uneducated, corrupt politicians, and the world=people didn't have their ass in the pants to say NO (as I did) because they were too cowardly to accept the personal (financial) price to pay for it.

4. The Spanish flu was a pneumococcal infection caused by a experimental vaccination of US troops involved in the then Gates grandpa (DR Gates). was. Nothing flu and certainly not from Spain, but imported from the USA experimental pneumococcal vaccination[ix]. Incidentally, at that time one already senseless Mask terror organized that brought nothing.

I had to do RIGHT foreign schemes for this:

P. 13 "the empty ampoule and the one used for this historical injection were passed Inject into the Science Museum in London. They would have a place there forever – next to Edward Jenner's lancet".

What irony. I heard that Jenner's first child was vaccinated and then he didn't vaccinate the second child. Jenner's experiments could not be reproduced by colleagues[x]. But that two instruments of mass murder lie next to each other in the museum...

p. 14 "Nine months later, an extraordinarily effective vaccine was available based on a platform that has never before been used for an approved drug had been."

Anyone remember the video with the decreasing effectiveness numbers? In the meantime **no one denies anymore that the vaccine does not prevent transmission (except whole sheep)** and self-protection... Just take a look at the list of side effects in the post marketing documents. COVID was one of the most common side effects... [xi]

After all, here it is in black and white, proof that something like this has never been allowed before

hasn't been and still isn't really approved, it's still one

Emergency admission, which is part admission for various age groups in some countries lost again.

So my dears. You can see I'm only through a few pages and already at 4 pages Word document and the description of incompetence hasn't really gotten that far began. If this continues, the review of the book will be almost as long as this book itself.

Stay tuned for the next chapters.

## II.

### Part 2 (quote):

"Project Lightspeed - [IRONY]Working with professionals once[/  
IRONY] Part 2

The outbreak of madness

By DrBine • February 13, 2023

So let's get into Chapter 1 of Project Lightspeed - The Breakout

[\*SPOILER ALERT\*]

If you want to keep the "suspense" and read the book yourself, you should read this  
Do not read substack! I reveal everything! Shameless! Biting too strong with a pinch  
corrosive irony. So nothing for snowflakes or wimps.

Trigger alert! (just to be safe)

With the substacks that follow, we are now in the introductory part of the  
satirical reading aid on Joe Millers, Ugurs and Özlems (yes, they have them too  
co-wrote and probably proofread the book, they can't  
squirm out) "Project Lightspeed". This part of a satirical reading aid is about  
the summary of the individual chapters with partial classification in the historical  
Overall context and correction of the widespread lies, so that the SuS  
(students) don't have to bother reading the book themselves  
and so don't waste their lifetime like I had to, because I had to read the book  
unfortunately read more than once before. The whiplash because of the frequent  
I am currently curing head-shaking because of the incompetence and the described  
madness

still out. The nausea that the contents caused me will probably last for a while  
stop.

So these Substack articles are a kind of psychotherapy for me. On the head,  
with my hand on the paper so that I can somehow repeat this twirled nonsense  
get out of my head The interpretation of whether this bullshit is about  
the content of the book or this substack, I leave it to that in the end  
kind reader.

Yes, dear reader, I can already see you smiling. So you also have in your school days  
only read the reading aid and almost never or never read the original book itself and  
nevertheless the class work somehow passed quite passable to good.

In this case you can actually save yourself the original. My satirical reading aid  
is far more entertaining and in the event of a blackout, the calorific value of the  
book not particularly high.

...

The first chapter, "The Breakout," despite its ominous end-times title, truly begins  
promises more action, initially a little sluggish, boring and lame. Little to

Excited, sometimes rather boring (self-)adulation and exaggerated hero worship. Yes, it's really amusing to read that Ugur and his family themselves have never owned a television (p. 17) and prefer to be on their own "Filter bubble" through online publications "that they consider worthy of attention held" (p. 18).

These sources are not specified, so it's hard to tell what the bias is Ugur is subject to his personal filter bubble. Possibly Nature, Science and PNAS, i.e. a pharmaceutical filter and the gatekeepers of mainstream science. So Ugur also knows about the power of the mass media and falls into the trap of the scientific falsifications and uses the MSM (mainstream media) - Manipulation system then itself as an instrument of propaganda and Manipulation together with his court clerk Joe Miller - so up-to-date still - with this book, which is reviewed, disassembled and neatly filleted here. The book "Project Lightspeed" is thus propaganda in its purest form and fuller Lying by omission or misleading with terms. Hence my many Footnotes required because unlike the mainstream, one strives to be genuine Scientists with a conscience and sworn to the DFG guidelines (Yes, I had to to swear an oath to the DFG guidelines before my doctoral examination, at that time one Freiburg specialty) at least for evidence. However, Ugur, together with the federal government, preferred to use 16 million euros propaganda advertising campaigns[1] and the censorship of critical voices[2] [3] [4]. but I owe evidence and sources myself, especially in this book. Whenever it gets down to business, Joe saves the endnotes, a prankster who thinks badly about it. At the beginning of 2020, Ugur will travel page 17 (with detailed clothing, I'll spare that the reader, because these descriptions have, unlike the descriptions of Charles Dickens, no historical value regarding the fashion of the described Epoch) to the JP Morgan Healthcare Conference[5]. This conference really exists and it actually took place again this year (2023). instead of. "This event had become the Mecca of the pharmaceutical industry, at which once a year hosted a huge show attracting tens of thousands of attracted scientists and investors as well as companies" (p. 18). " Ugur explained his audience that 2020 is the year that BioNTech will convince its skeptics" (p. 21).

So Ugur makes promises at a Bankster event that 2020 is the year by BioNTech. Is he clairvoyant or does he already have a perfidious plan? It's easy predict the future if you create it yourself. Future proves past. How many Coincidences until it becomes mathematically impossible? Was there any pressure from investors at this conference? was standing there is a certain pressure to succeed because otherwise the company would fly right in his face would be because it was dependent on venture capitalists and BioNTech a huge one **mountain of debt had piled up?** (Spoilers for Chapter 2, which becomes a mountain of debt for the company actually emphasized again and again in various chapters). "As soon as he finished his presentation, he flew to Seattle to meet with me Representatives of the Bill and Melinda Gates Foundation, BioNTech for the development of a Series of new vaccines recently pledged \$100 million (emphasis added). to me). A few hours later we continued to Boston for a stopover a cancer immunotherapy company that BioNTech just for wanted to buy \$67 million (p. 21)". I have to today (February 2023) only

found that Bill Gates invested \$55 million in BioNTech, how to do it found on p. 45 in the book. I don't have another \$100 million anywhere else read something. Were they possibly empty promises, because in one In later chapters, BioNTech goes begging on the New York Stock Exchange (and only becomes laughed at once). This passage may be a dig at Gates Foundation, like, "You could have made more money, but you were closed at the time stingy"?

One wonders at this point what this shopping tour actually is indebted company should? Does Ugur make one on Amazon? never make a profit always invest and avoid taxes?

(Well, (the city of) Mainz is now filthy rich thanks to the trade taxes from BioNTech, the must have at least paid proper taxes[6].)

By the way, English slang, you know it from Salt'N'Pepper. The N stands for 'and'. Organic and Tech and also contains the code word NT under which the idea for this company (hence probably the middle capitalized NT at BioNTech) already in Ganymede times in Ugurs Head fermented, but that comes later. (Oops, spoiled again...)

OK, he meets Billyboy's rep and tries to scrounge money for VACCINES (which he probably never received)?! Didn't I get something there? Ugur does research supposedly at that point before he even according to this book starts on his first vaccine to brew, based on cancer therapies. But BioNTech gets it from Billyboy 2020 promised money for VACCINES with which he quickly started another company buy something that does something completely different? OK, maybe he just has that Debt account pushed even further into the red, make a few million at one Mountain of debt of around 400 million (p. 62) is no longer soooooo much.

At this point, a regular reader who only reads the state-approved MSM media hear, maybe confused, because BioNTech always as cancer research biotech crap was described. Anyone who has not dealt with the company in more detail knows not that at that time BioNTech together with Pfizer was already working on (unsuccessful) influenza vaccines and other (unsuccessful) vaccines. Billyboy had already in September 2019 bought shares of BioNTech and "(t)he Bill and Melinda Gates Foundation has invested in the Mainz-based biotech company BioNTech. In addition to a new form of BioNTech also offers cancer therapy know-how for the treatment of HIV and tuberculosis. [7]" Billyboy doesn't seem to have invested more money after all.

Incidentally, Gates divested its shares in late 2022 and then jumped right into it admitting that modRNA vaccines don't work because they don't transmit prevent, fail with variants and do not last long with old people: Literally the original quote "The current vaccines are not infection-blocking," Gates says, "They're not broad - so when new variants come up you lose protection - and they have very short duration, particularly in the people who matter, which are old people"[8] [9]. To At that point, he had sold his shares for maximum profit. falls that actually insider trading?

The somewhat 'fishy' cooperation with Pfizer already exists at this point in time a while. I'll get to why I say fishy in the relevant chapter, where it's about how this cooperation came about and that's kind of difficult to be defined and very stale aftertaste. Also why BioNTech at a big partners like Pfizer has to go begging is a bit strange, but maybe it can with the desire to remain independent may be explained.

From p. 21 onwards the fairy tales begin again, as you can see from the MSM media

(Main stream media or controlled, censored, trusted system media) knows. A little more elaborate and not quite as dense as in the prologue - but nevertheless the usual, well-worn MSM lies - which have long been debunked.

## 1. The lie of asymptomatic spread.

On page 21, "this pathogen could be passed on undetected by asymptomatic people. It was a silent attacker."

**Ugur is a doctor, he should have known from his studies that there is no such thing as respiratory diseases, because how are the pathogens supposed to get out of the lungs or the respiratory tract without coughing, sneezing and a runny nose?** Do they just beam up into the neighbor's nose? Pick and then stick somewhere? But then you would have to somehow actively transfer the booger into your own respiratory tract. Not very practical, I guess, at least from a certain age group eating boogers is no longer so popular (allegedly). Biochemistry professor Scot Napper (University of Saskatchewan) sees things differently. He thinks booger eating is part of the immune system and important for health, no kidding. And if the MDR confirms that, it must be true! This was even checked by the MDR fact checker!

[10]

Well, Ugur doesn't practice anymore, so you can learn a few basics (from the pre-clinical section) of the basic studies again forgotten or the healthy have left common sense hanging in a cloakroom.

First of all, Dr. D'Osten also actively the lie of the asymptomatic

Distribution[11] (one looked in vain for his doctoral thesis at his old university, because water damage[12]) and as it is known, the correction of this omission/lie/ Suppressing the asymptomatic spread is easy to get

practically no longer[13] (the Tagesschau also builds on that, the errata/

Corrections are also welcome somewhere very small where nobody can find them, hidden[14]). dr

Osden submitted NO ERRATUUM (he already had the dollar signs in his eyes, because he was on a pointless, useless, poorly designed PCR bullshit test to publish), which scientifically is absurd (both the PCR imbecile dizziness test as well as "forgetting" an erratum).

**Ultimately, the Webasto Chinese woman was definitely symptomatic and had taken paracetamol (or the Chinese equivalent)..** As far as I know it's not a party drug, so she certainly wasn't doing it for fun.

**Quite apart from that, there was the big Wuhan study, which the the asymptomatic spread refuted hat[15].** But again, western arrogance:

Chinese data cannot be trusted or read at all because they are from Chinese and Chinese are communists and communists generally falsify data because Communism doesn't work otherwise, or something like that.

Probably dr. Osden closed in on others and at the same time completely ignores the fact that he is acting in a racist and non-inclusive way. But racism still seems to be perfectly OK when ignoring unwanted data or even whole data States as long as it is politically correct racism directed against Russians or Chinese turns.

## 2. The lie of mRNA (p. 28).

The author only ever writes about mRNA and thus deliberately lies to the reader. It deals **about modRNA**, that has about as much to do with RNA as a bobby car does with one Lamborghini. Both have 4 wheels and you can drive with them.

**Unfortunately, modRNA contains an amino acid (pseudouridyl) that is normally only rarely used in cancer cells and certainly not in the amount as in the modRNA, in which ALL uridines have been replaced by pseudouridyl without exception.** As a result, this genetic information can still be sequenced directly from the blood 28 days after slaughter[16].

Not nice... So much on the subject falls apart immediately if you look at it askew or coughs. MAYBE you should have tested it first?

Maybe during the clinical trial, just as a suggestion if you tell people maybe took blood anyway? You definitely have in the whole

Forget about the stress of the pandemic (for once). It can happen. Swam over it.

One must concede that Joe will address the various RNA in a later chapter variants and since the subject of modRNA is actually discussed along with uRNA and the absolutely creepy saRNA principle (all coming in later substacks). There but probably only stuck with normal readers that RNA fast is broken down and they don't get the idea that it's just not the case with modRNA.

Here is manipulated by fragmenting the information and no connection is established. A classic. Details on how this works can be found in "Why Are The Lambs Silent?"[17]

Pages of praise for the childhood of two migrant children follow. The children of migrants are soooooo busy, more busy than German children[18]. Also Would you like a pinch of migration propaganda? I'm surprised that in this book so far has not yet been gendered and there is a blatant lack of trans people and same-sex relationships. How did it get through the editing?

I'm eagerly awaiting the lesbian or gay couple who will surely be in one of the Chapter will still play a role. However, you have to go to the diversity adulation wait for the last chapter, but there she comes with the mallet.

In general, Ugur seems to be the last polymath, right after Leonardo da Vinci, an unrecognized genius (Ugur not Leo), because Ugur "at the end of the 1980s [...]

In addition to studying medicine, he also took a correspondence course in mathematics" (p. 26).

I also tutored math for biologists for 2 years as a course assistant and the created model solutions. My practice group did better in the exam than that of Prof. However, I would not call myself a mathematician just because I have a "Maths for Natural Scientists" certificate. Since the correspondence course seems already one

A while ago (significantly longer than my time as a course assistant, and I would Currently NOT capable of matrix calculation and differential equations, even if I do taught at the time), Ugur makes "a few simple assumptions: that the entire human population is susceptible to this coronavirus, one Transmission rate could have from two to seven, meaning that each person who carries the disease, (and) would transmit it to several people. Because of the He used the few available data on deaths from the new disease a mortality rate of 0.3 to 10 per hundred infected, with the elderly probably on at the upper end of this macabre scale. In the best case this would means two million deaths worldwide, which far exceeds the last epidemics would" (p. 25).

Unfortunately, Ugur makes a few mistakes that he has to do with due to his ignorance ignorance could not know (Find the stylistic form of the consonance in this sentence that gives extra points):

1. Cross-immunity to SARS-COV2 has been documented in several publications [19] [20] [21].

The virus encountered a high percentage of already cross-immune population, that was no later than September 2020. Then there were two more receipts. Total 1x Science and 2x Nature. However, Pharma vehemently disagreed dangerous rumor of natural immunity and let corresponding Censor statements[22]. Alignments, i.e. comparisons with the spikes of the seasonal ones Corona viruses, Ugur is somehow comfortable in all the stress of inventing a pandemic simply saved.

2. Modeling stands on more than shaky ground, like other 'mad scientists' **had to find out.**

The famous hockey curve of global warming by Dr. Michael Mann is court-confirmed fraud[23] [24], which unfortunately doesn't seem to make it into the schoolbooks. This may be due to the fact that the MSM media prefers to remain silent about it and simply does not report, as it would be their (legally stipulated) task if there weren't politicians who like censorship on the supervisory boards of the stations and most of the editors themselves are left-green would be filthy. So much for the fourth pillar of democracy.

Neil Ferguson of Imperial College didn't fare much with his modeling either better. With his crappy modelling[25] [26] [27]he plunged the world into useless, pointless, harmful and (individually) sometimes fatal lockdowns. Even Klabauterbach gives now admit that some of the measures were bullshit[28] [29]. And Ferguson is a professor... he has nothing else to do than write bad models and getting paid for it by the Deep State or just not getting up working models that create panic like BSE (2001), H7N9 (2005) and H1N1(2010). Each time, his anticipated catastrophes did not materialize. No I have no idea why he was never fired for his incompetence and the damage it caused Damage. Ugur is following in Neil's footsteps with even less of a clue

### **Mathematics and Modeling.**

3. What data does he base his assumptions on?! Did he roll these? tarot read? Counted red cars that drove past in a certain time or his daughter a number between 0 and X?! Its numerical basis is reminiscent of "(Dr.) Merkel explains (us) you the number of reproductions[30]."

4. If he did study mathematics, he must learn numbers and set theory have had. "SARS had claimed over 770 victims and MERS at least 850 (p. 26)" So both together 1620 victims WORLDWIDE with approx. 2500 deaths in Germany every day

from the lethal injections from Ugur's company. Why the panic?! That's 880 fewer deaths than

die every day in Germany alone anyway. Cost-benefit calculation, part of the Training as a retail salesman seems to be rather rare in politics having learned that you allow such a waste of money (or you just became simply bribed), because it definitely paid off for the pharmaceutical industry. His wife is accordingly impressed by his "boldness" in making the prognosis (p. 27), as befits a good wife.

A pandemic had broken out "without the world noticing had" (p. 27). I would guess there's a reason nobody noticed: THERE NEVER WAS A PANDEMIC[31]! At least none that are measurable

**would have resulted in excess mortality.** On the contrary, the number of deaths in 2020 was below that

expected value of the statistics of previous years.

Anyway, what made him think of useless things at such an early stage

Fantasizing about measures like lockdowns and a mask requirement (p. 26)? This

Bullshit measures are so stupid that, with good reason, they've never been used before was used (except by a few lunatics who were already at the time of the Spanish want to enforce a mask requirement. history repeats itself. Did then was of no use and was counterproductive this time[32] [33]. school closures (p. 28), how does he come up with school closures? Where do these nonsense ideas come from, which have been proven didn't bring anything[34] [35]and now (in the third year of Corona, i.e. February 2023) from be investigated by the European Court of Human Rights (ECtHR)[36]? lockdowns were also pointless and destructive[37] [38]. Who gave him these measures whispered? Does he have the German political puppet squad these measures whispered? Where did this crazy idea come from (he doesn't drink alcohol)? Worse Nor: "Experts with in-depth knowledge of past epidemics seemed confident that the current outbreak would come and go," explains Ugur. "But I said to Özlem: 'This time it's different!'" (p. 28) Why exactly should one also listen to experts who have experience in the field? Overconfidence, hubris and a dash of heroic overdose 'Marvel' movies (p. 20)?

From p. 26 it gets scientifically really abstruse again "The end of the 19th century discovered RNA". Quite apart from that, RNA and modRNA are two pairs shoes, did I miss something? Shouldn't it be in the mid or early 20th century? century? Watson and Crick have (not to mention having the used X-ray film of Rosalind Franklin and she was not a co-author of her paper), published the structure of DNA in 1953[39].

Joe further claims on p. 26 "RNA can also act as a chemical «catalyst» and produce copies of themselves without the help of other molecules (just like that)." OK, at this point I'm also wondering, do I have something in the genetics class? lost? What is this man talking about? I didn't have that in my studies noticed. How exactly is this supposed to work? Does he mean the RNA world theory? Looks one in the given source[40], yup, seems so. It's so "special" because it's busy just a few specialists who nobody took seriously in my time. The author poses this rather far-fetched theory as fact, just like he didn't between mRNA and distinguish modRNA. Is this willful data falsification or does he understand maybe not really, of which he writes on p. 35: "**Naked RNA is produced outside of Cells degraded in seconds thanks to ubiquitous enzymes in the air and on surfaces**" **Yes, RNA but not modRNA. This is real adult lies, isn't it** **Advanced or lies for sheep and lambs, which are then silent.** one lets just a few "important" details gone, like, the stuff was 28 days after smurfing sequenced directly from the blood. So much for "quick" dismantling. I am now not a mathematician, but it seems to me that 28 days are slightly longer than a few seconds.

From p. 35 it's finally back to business and in terms of concentrated Incompetence: "If it worked - and there was a big question mark behind it - a way to find the mRNA directly to the correct immune cells in human bodies (emphasis mine) and keeping them active in them long enough the possibilities were almost endless."

**So you wanted to transfect immune cells (i.e. provide them with new genetic material that they then incorporate and use)? THAT was presented differently in the MSM media. The smurf should remain at the puncture site of the muscle and not transfect immune cells and also be degraded very quickly, both the modRNA and the spike protein.**What now? Which cells and how exactly did you want to do it, get it right? That brings us to Karikó, the Hungarian spy[41]. But THAT is a completely different one

History, which I will not go into here, would lead too far. Karikó is Senior Vice President[42] at BioNTech and on whose work the basic idea is based. (Here just to summarize it very briefly: Dendritic cells patrol in the mucous membranes and skin, eat DNA/RNA and present it to T cells and can activate them and trigger psoriasis (psoriasis) if it's stupid runs). So the goal was to transfect these dendritic cells and that **switch off the immune system, which was NEVER mentioned in the MSM [43]. How exactly did you want to turn the immune system back on afterwards? I've never read anything about that.**

Furthermore: the nanolipids go through the bloodstream into ALL cells and not only into the dendritic cells, this has long been known from animal experiments, even from Pfizer's own data [44]. How would you steer that? So even here the advertising messages of the governments at the time and what was planned and what actually happens in the organism and what is in this book contradict each other. Man thinks God directs (or at least without a comma?).

But here we also have Ugur's little problem that he is unfortunately not able to is to provide a small transfer, although he is said to be a professor for is immunology. He's researching cancer. An autoimmune attack is exactly what you want. You want to destroy the tissue. To use this autoimmunogenic principle as a "vaccination" and to assume that there will be no autoimmune reaction?!

Hello?! What exactly was he thinking or not thinking? It stands **but even on p. 37 explicitly in this book, in that very chapter "Weapons like Antibodies and T-cells, the snipers of the immune army, attack with all their might, once they've identified a specific molecule as their target." ANY cell that will produce spike (dendritic cells or whatever) will be killed by the T-cells once they express the spike, which is exactly the working mechanism of shrinkage should... What's not to understand there?!**

Even Matthias Kromayer, venture capitalist and certainly not a bioscientist p. 41 quoted "I told Uğur bluntly that I simply thought that was crazy" (unfortunately the rest of the sentence is missing, but can be extrapolated with crazy hold). He's smarter and has more idea than Ugur at this point. Had he ever met people with solid, heard common sense.

That reminds me why a maximum of 2 out of 10 tasks in class tests Should be transfer tasks (yes, I was briefly involved in the traineeship for vocational schools the subject combination biology and English) because otherwise too many students would fail

and you have to repeat the class work ...

Transfer performance tasks have the highest score and the fewest students can really solve them because you have to think for yourself. It works in today's school system

but about COMPETENCES[45]. Unfortunately, problem-solving skills do not require knowledge

ahead, but rather a competency competency[46]. At least better than that incompetence, which is the issue here.

"[BioNTech] had now treated over 400 cancer patients with mRNA technology. (p. 36 )"

**But with what result?** Anyone healed? Did anyone survive? I was fed up reported to Vienna that all patients died during the experiments and also from the

According to Flurfunk, the University Hospital in Freiburg came up with nothing in mRNA studies, which I once considered interpret the subjects' exitus.

On what successful concept exactly is he building his new product? Maybe up desperate hope, because "A first clinical study that BioNTechs individualized mRNA vaccine in skin cancer patients shows promising results (emphasis mine). P. 38 "I would like footnotes with the study numbers here **had, receipts. So, in this form, these are pure allegations that are being spread here become.**

In plain language, there were no results yet, only "promising results", that is the hope that maybe someday it could work with the mRNA. Was the "Treatment" of the 400 cancer patients according to the motto: who dies earlier, dies not of cancer as in the clinical trials on smurfing? Study stopped voluntarily because of death[47]

(this is NOT A JOKE. Just look at the footnote (I also put jokes in there)) or the patients did not die, but had a serious side effect (SAE - severe adverse event), but NOT DEATH[48]. This is what happens when you allow that the pharma writes the rules for studies itself, keyword would be in this Together the Brighton Collaboration[49] [50]. Who more about the Brighton Collaboration can watch Amazing Polly's video[51].

Where are the publications on these studies!?! Certainly not in the endnotes to chapters 1. Don't you have to publish something somewhere, even if it went wrong is? Or did they all voluntarily drop out of the study because of premature death like in the case of the Smurfing? (NO JUST, look at the footnotes from the section above). Unfortunately, the author's bias also extends to Billyboy, the "greatest philanthropist of the world" (p. 43). I think you can get neutral reporting from this book really don't expect.

The author is the total sleep sheep and fanboy of Billy and BioNTech and does it at least very clearly, he really leaves the reader in no doubt what to make of his view of events to hold and to expect. At least that's honest. Onto.

44 one wonders whether the quote really comes from Ugur or from Yuval Harari, or did Ugur inspire Harari (hackable animals)? Doesn't Moderna have anything similar claims?[52]. "The immune system could also be hacked, and one of the best biohacker in the world stood before him personally." At this point the author would have maybe look up what biohackers are (besides a Netflix series [53]).

"BioNTech had expanded its involvement in the infectious disease space and developed a vaccine against influenza together with Pfizer, researched with the University of Pennsylvania on various pathogens and worked with the Gates Foundation on solutions to two of the "big three infections" that are wreaking havoc in

rampant in developing countries: (By the way, it's just an HIV vaccination from Johnson&Johnson (the name sounds familiar to me, wasn't there something with it Corona vaccination?) failed with a bang[54]. Because vaccinations are not generally work is not surprising. What is more surprising is that it was noticed and was stopped. In the case of the C-Smurfs, it wasn't noticed that they weren't protects.), and tuberculosis (the third is malaria). As Ugur in January 2020 for the first time considered developing a vaccine against the coronavirus, these were Projects still in early stages, far from clinical trials; from an approval or production in large quantities was certainly out of the question. (p. 45) "

Just to make sure I understood it correctly. BioNTech is working with Pfizer on Vaccinations sponsored by Billyboy and have been for a number of years, not just weeks or months, and these are still "a long way from clinical tests".

**In plain language: No results, not even preliminary results, no experience, none Idea.** Great, working with professionals for once. It gets even better and mine Whiplash from shaking his head a little stronger: "At first, however, Uğur was **forced to take a crash course to learn more about coronaviruses that he knew relatively little**"(p.46).

No idea about corona viruses, no idea about virology, a real "pro". wow me am NOT impressed. I have at least the lecture "Introduction to Virology" visited, which always began with an interesting dead man, some suicides by PhD students in the lab because they were desperate about their project and then in the lab hanged. I found that quite amusing at the time, unfortunately the professor put on for this Anecdotes never provide evidence, they may have been fictitious.

I don't remember much except that there are viruses that use all 3 reading frames and not only produce proteins in the main reading frame. Corona viruses seem so (hopefully?) not to do so because they have the luxury of a large genome and that don't need it, like some small viruses that are trimmed for data economy, the are zipped, so to speak. But you should check something like that. Has that been checked? and to be on the safe side, set the secondary reading grids with silent mutations to stop? I'm only asking because I don't have the software to check it myself. I used to wear GCG a SUN machine that still worked with DOS command lines (yes, I'm (still out the last century) and soooooooooo old).

By the way, Ugur reminds me at this point of a blonde, long-haired intern (an I can't remember more about her) that I had during my time as a doctoral student and who pulled out the deodorant next to the Bunsen burner to fog herself up[55] (those with flammable gas that used to exist before the climate, you know...) but of it (was) convinced that one would later receive the Nobel Prize with his doctorate.

**So Ugur has no idea about the quite complex, meanwhile in whole books Corona virus genetics described above, has no idea about protein design, has no idea about vaccine development, doesn't even have preliminary results of its currently ongoing clinical trials, the rest aren't even ready for clinical trials.** That really gives hope for success, that's all I can say. In addition, there is an additional complication: "Several teams had tried to develop a vaccine at the time. When the virus went away, pharmaceutical companies lost that Interest and funding dried up (p. 47)."

**Um, no, the test animals died of ADE and warnings were given against further testing. It backfired so badly that it was stopped to be on the safe side[56]. Well, as a beginner/intern you don't know, someone who has worked in the field for a long time could have told you,** such as E.g. Peter Dashak[57], or Dr. Osden (aka Dr. Drosden), just as a suggestion. But you should have asked and, above all, you should have known that you have to ask and who you have to ask.

However, this presupposes that one recognizes that one does not know something. If but still at the level of knowledge of ignorance about one's own incompetence, there it's going to be difficult.

The "funny" thing is that the papers that I have here as a counter-argument address the topic

Corona vaccine even just to touch in the footnotes list, a few pages further in be quoted in the next chapter as proof of how brilliant it was that it one then had the same experience as the researchers before, only formulated differently in

kind of "our vaccine is better and doesn't make these known problems", but I'll get to that in later chapters. As Einstein (allegedly) said: "The Insanity is defined as doing the same thing over and over again and getting different results expect." Can this quote be taken as evidence of Ugur's state of mind? Speaking of (grand) madness: "It was by no means certain that an «artificial» spike Protein made in the lab detached from other virus particles that keep it stable would share every microscopic dent with the spike of a coronavirus. A deviation of a fraction of a hair's breadth endangered those who held him receive. Uğur was aware of this risk and searched based on genetics precise sequence and a digital model of the virus that he quickly created Points in the chain where he could "splice" the protein, with enough of the surrounding letters - the amino acids - were preserved to stabilize it, so that it retained its perfect shape (p. 48)."

**Do I understand this in the right manner? Someone clueless about coronavirus, none trained in protein engineering (like me, who has a doctorate in the field) because he has only ever worked with RNA, who roughly knows that the whole thing can be tricky, snips out the protein sequence on the computer and thinks "That's fine "?**OK, working with professionals for once. It gets even worse: "Now a team that had no special knowledge about the new pathogen had to be put together to work out critical questions for the vaccine against a new virus (p. 49)."

OK, again, do I understand that correctly? A guy who doesn't even know the basics of Masters protein design, knows nothing about viruses, works with a team that also has no idea and also does not call a protein engineer his own and don't even know the methodology of how to characterize proteins afterwards, on one Drug given to billions of people?

It's like having a plumber dealing with closed pipe systems connected pump, hires as a vascular surgeon. It's really creepy and all so much incompetence in one heap that I get pimples reading this.

"As of January 24, 2020, there were fewer than 1,000 confirmed cases of the new Illness. On January 25, Uğur and Özlem initially made the decision on their own (emphasis mine) to make a vaccine. On Sunday evening January 26th **Uğur came up with the design of the first eight vaccine candidates and the technical ones Construction plans sketched for you.**"

I don't know who here knows and hears "Mäcke makes you feel good". He always means Ugur would have thought up the construct on the toilet. It was probably a little slower than one session, but not much longer. But then Mäcke did go it alone correctly recorded. GO ALONE! A scientist without the necessary for this project **Basic knowledge in virology and protein design decides to create a construct alone. What can possibly go wrong?**

My interpretation of this first chapter of the documentation of hubris and ignorance turns out to be devastating and I wonder what's to come in the remaining 9 chapters can. How much worse can it get there?

Let's summarize this chapter briefly:

The investors put pressure on the JP Morgen Show 2020, Ugur succeeded them promised and is now DESPERATELY looking for a successful project. He tinkers in

his sick brain and complete overconfidence together an epidemic, although at that time everything spoke against it[58], but it HAS to be, because Ugur needs it

this project for the survival of his biotech Klitsche, which is heavily indebted. Therefore he probably pulled out all the stops to make it a pandemic too (although it none was made except in the media. A virtual test pandemic). Billyboy and the Cabal see him as a useful idiot and use him for their eugenics project? Then

**nothing beats a useful idiot who genuinely believes the bullshit it's being used for.**

Without rhyme or reason and without basic knowledge of the precautionary measures of the For protein designs, he cobbles together RNA sequences (modRNA sequences, what the author omits). Single-handedly. Without even asking a scientist who has any idea or experience.

OK, ...you can do it, ...I wouldn't recommend it.

Dear friends of the cultivated footnote. Fancy some more verbal virtuoso[59]?

You can also subscribe to this substack, then I'll trash your mailbox straight away.

Maybe at some point I'll also dictate the texts for those who are lazy to read. I like podcasts too

Dear.

**Part 3 (quote):**

"Project Lightspeed - [IRONY]Working with professionals once[/IRONY] Part 3

Incompetence and cliques, an explosive mixture

By DrBine • February 21, 2023

Welcome to Chapter 2 of Confessions of a Mad Scientist (I love alliteration). At this point I'll just leave it open whether it's Ugur or me think. Just to be on the safe side, because of possible lawsuits and the like.

Chapter 2 is called Lightspeed, i.e. the speed of light.

As we should all have learned in physics, the speed of light can never be reached become, at least not of matter. Because the more you become aware of the speed of light approach, the more energy is needed and the mass tends to infinity.

However, as the name suggests, infinity has no end, so it can never be reached and therefore neither does the speed of light. Trying the speed of light wanting to achieve is in our classic physical 3D system from the start doomed to fail, at least according to Einstein's special theory of relativity.

If Ugur couldn't have chosen a less ominous name, not one who directly anticipates the end? Where's the tension in that? Or is it rather a self-fulfilling prophecy?

Incidentally, if BioNTech lawyers are reading along here: the data in the book contradict according to the data and evidence submitted to the EMA and FDA (I'll go on that then in the appropriate chapters a) that I read the book as a fictional novel treat whose protagonists only coincidentally bear a resemblance to living persons. I can satirically review fictional novels as I want, that's art. satire can do anything at least currently. Who knows what censorship laws will be drafted that then it might even be applied retrospectively. ...

Where did we stop last time? Oh yes, Ugur "researchers and a [...] of Entrepreneurs dependent on venture capital" (p. 52), who meanwhile "400 million euros **accumulated debts**(p. 62), dusts off his mathematics knowledge from distance learning from 1980 and calculates a pandemic at home in the evening between two trips to the toilet (because in the toilet he thinks about the modRNA construct).

He rolled the pi x thumbs for the variables, I assume, for a derivation

Unfortunately, he does not provide us with his estimated values, because he works according to Popper: "According to Popper

one arrives at what one might call "truth" by asking the "Tribunal of Experience" proposes bold and imaginative hypotheses. Can have an idea or a suggestion cannot be refuted and all other possibilities have been ruled out [...] one has an established fact (p. 52)."

There's only one catch. The system is called "Tribunal of Experience". If you don't have any experience or only experience that doesn't fit the topic you're dealing with, you can forget the system, I suppose. Unfortunately, as we saw in the last part, Ugur lacks the knowledge he would have needed to work on the problem. But he doesn't know that because he is in the realization phase of ignorance regarding his own ignorance.

He therefore believes: "A global pandemic was in the making, and not a non-clinical one Method - whether washing hands, wearing masks, quarantines or lockdowns - could stop her permanently. A vaccine maybe, but only if it's timely

was available (p. 53)." On what is this belief based, whether on the Bible, the The Koran, the tarot, unfortunately the author doesn't tell us. As it is at this time, beginning As of January 1st, 2020 there is still no scientific data to support Ugur's belief could, the term faith is well chosen here.

My math teacher always said, "In science, you either know or you don't know.

People believe in religion class." The man was right, may God bless him.

**It's "funny" that Ugur p. 53 believes that neither masks, washing hands, quarantines nor lockdowns will do anything and what does he do from chapter 4 (p.122)? He washes his hands and face in a panic, wears a mask and goes into isolation at**

**home. Don't have to understand now**, is certainly part of the "tribunal of experience" according to Popper.

"Apparently the corona virus has an incubation period of two weeks, which one further encourage asymptomatic spread. (p. 54)" THAT was new even to me.

I wanted to play it safe and see which scientific, peer

**reviewed paper Joe uses here as a source... The daily news from 26.01.2020, 8:00 p.m.** No more questions, Your Honor.

Tagesschau as the primary source for this claim about the incubation period?! It has to be must be a bad joke! If you go into a normal scientific

If you look at the publication, things look a little different. The incubation period was for the **Alpha variant, which is the subject here, approx. 5 days, beta, 4.5 days, delta 4.4 days and**

**Omicron 3.4 days[3].** Not even close to "two weeks", even on my rusty ones Mathematics knowledge that I currently have, at least in mental arithmetic, as Fish sandwich seller, train (...) From Substacks I can't pay the health insurance, which has increased thanks to Ugur's nonsense actions over the last 3 years. The Tagesschau has clearly been spreading the usual crap here that they've been spreading for years, and they usually refrain from linking their sources (because they probably don't exist, nor do studies that supposedly show that the smallpox vaccine protects against monkeypox would, but what the PEI claims). Proper citation has never been the forte of the state media.

One expects in vain a correction from Joe, Ugur or the Tagesschau. If

did you even realize in the last 3 years how wrong you were?

"By now, BioNTech's employees had decided to take part in Ugur's annual "January surprise"

used to, which he presented to them when they went to the office after the Christmas days returned. Ugur used the time to think that the vacation gave him to to concentrate exclusively on a certain topic - usually one where

**the company had reached an impasse(p. 55)."**

Is Joe actually aware of what he wrote there? Ugur breeds

**habitually comes up with fixed ideas when he has too much time, and then**

**habitually they fail too.**It's such a regular ritual that his employees expect it, endure it, and endure it, even if they already know the outcome know and expect that it will fail this time too.

As long as the salary ends up in the account on time, "Wes

Bread I eat, the song I sing[4]". The main issue with Ugur's ideas seems to be "the Weapons were forged, but they did not bring the necessary strength to every patient on (p. 55)". Now, 2023, looking back, knowing that Covid-19 is one of the

**The main side effects of the preparation in the studies was[5], and Pfizer and thus BioNTech already knew that in February 2021,** a system seems to emerge that the employees of BioNTech have known for a long time, just not Ugur:

Half-knowledge is only half-knowledge and can become very dangerous or at best fail before it harms anyone.

Ugur reminds me of my PhD supervisor. As long as I follow his instructions

ignored, it worked. If I listened to him, it gave me weeks of my life

tasted and nothing came out. At some point he just said, "Why am I still talking

You, you do what you want anyway." I didn't contradict him and had

my rest. At BioNTech, unfortunately, the employees listened to their boss. That already has

Killed many people and will kill many more I fear.

"To increase the chances of having an effective vaccine in time, will

BioNTech completely change the way vaccines are manufactured

(p. 58).” What can go wrong if you simply throw overboard the established, usual rules that exist for a good reason. That's easy in this case, of course, because I bet Ugur doesn't even know the established rules. Nobody at BioNTech knows the established rules, because you should have learned them from a large corporation at some point. I assume spontaneously that nobody in the company had any experience with vaccine development. So no one knows the SOP (standard operating procedure) for the development of vaccines or any drugs beyond phase 1.

But if you have really earned money as a specialist at Big Pharma, you won't be hired by one

Startup Klitsche, and I say that from my own experience. After I even at two larger corporations (Novartis fired me because I was unacceptable for the pharmaceutical industry.

I should rather work for the other side. I guess that's what I'm doing now. Included I was really quite tame back then), I worked briefly at a startup

hired. I resigned myself during the probationary period (although it was the first permanent one

contract in my life. But I warned in the interview that the

there is a probationary period for both sides, at least I was that fair). This chaos and maneuvering around without a clue, including rookie mistakes, because a large part of the crew is fresh from the

Uni and otherwise has no experience is difficult to bear. It's not funny if you are at the customer's and the logistician has forgotten to send the devices. I was already in a phase at the time that I had a trunk for precisely this reason full of devices, exactly for such a case, which then happened almost immediately.

Startup stop, quite apart from the fact that you have agreements from the

Job interviews are also quite willingly simply ignored. I wasn't the only one with Experience that terminated during the probationary period.

”So far there have been no reports of people contracting the disease outside of China died. However, at the end of that same Monday, BioNTech began work on one Project that, within eleven months, broke all historical records for the manufacture of a drug should break (p.59).” Here, of course, one has to restrict that no

Not reporting means there are no cases. At that time there was already December 2019 a confirmed case in Paris[6] [7], in Italy in September 2019[8] and it seems that the virus was already circulating in Barcelona in March 2019[9] [10]. But the cases were

treated as a normal flu and only afterwards became Corona

redeclared and largely ignored by the media. These studies, especially waste water and with PCR can definitely have their shortcomings, but all tests had that in the Corona period too, this is a constant error that runs through all papers and data the Corona period pulls through because everyone used the faulty methodology. Thus in to be (in)consistent, I would guess.

Let's move further into the world of scientific substacks and blogs

there are indications that the "new" coronavirus may have been around since 2018[11] and the NIH may have been working on a new coronavirus vaccine since July 2019 worked[12] [13].

In addition, parts of the spike protein were already found in bacterial samples from patients in 2019

China[14] found on a so-called plasmid with two antibiotic resistance.

Plasmids are circular strands of DNA that accompany bacteria alongside their normal genome

have. Traditionally, laboratory plasmids contain e.g. E.g. the pBR322 series[15] [16] two

various antibiotic resistances. If you look at the work of Ralph Baric busy, he has distributed the genetic material of the corona virus to a series of plasmids, so that the genome of the corona virus could be edited in manageable pieces and didn't have to mess with the whole genome. Since that's a little more complex, there I have my own substack for this [17], so that you can roughly understand how spicy it is, that parts of the spike protein were found on a plasmid in patients in China already in 2019. Also in soil samples from the Arctic from the time before Corona found the spike protein[18] [19].

I can't currently judge what that ultimately means for the history of the Spikeproteins, its origin and future. The spike and possibly that

**Coronavirus Sars-CoV2 is definitely older than the Wuhan Fish Market outbreak** and something stinks here, neither of fish nor of pangolin, because they had nothing to do with it. For the pangolin, however, this action was good because it is now illegal to eat it[20]. One could say that the coronavirus could have saved the life of the pangolin, or at least delayed its extinction. The positive rays of hope of this time are so small that you enjoy every little thing.

**All of the above references make the Wuhan Fish Market story completely absurd, because the Wuhan story was much later than the samples in which the spike protein had already been detected.**

Unfortunately, hardly anyone questioned that. If the virus in September in Italy already circulated and in December in Paris, how can it be from a lab in late December be escaped from Wuhan?!

In the chronology of events there are gaps as large as today (02/2023).

barn doors. That's why I keep my hands off a chronology, that's currently one never-ending story with too many potential wrong leads to tell the truth disguise.

Since such information is now actually only distributed in blog form can and rarely will appear as papers, I also include them in this analysis a, although of course they do not meet the current scientific standards for Publications correspond, just as little as this reading aid.

**As for the "historical records" that have been and are being broken here, these are probably more in the area of deaths, number of side effects and Vaccination damage was recorded, the extent of which cannot be estimated at the current time and certainly not with a correspondence course in mathematics from 1980**

(even if nothing has changed in the basics of mathematics since then should). Denis Rancourt tried it anyway and came up with about 13 million victims of smurfing, i.e. victims of the gene experiment, worldwide[21].

"As a fan of superhero movies, Ugur already had a name for this historical one Mission found. "We call it," he said while standing at the whiteboard and each Saying the syllable out loud while writing: "Project Lightspeed (p. 59)."

Ugur really suffers from a massive heroic complex that reaches dangerous proportions assumes Lightspeed (Julie Power) seems to be a rather obscure heroine from Marvel universe[22] that only real fans know about.

The leitmotif of incompetence and ignorance also runs through this chapter:

"In another horror scenario, the virus could become even more efficient through mutation and infect more people, and much faster (p. 61)."

As I mentioned in Part 2 of this series, I only had the "Introduction into virology", which I heard in my fifth semester. But that's the end of it for me learned in the 1990s: A virus can EITHER become more deadly OR

**more contagious. You can't do either because if it's too deadly, it kills its victims too quickly for it to spread. A deadly virus therefore limits its spread itself. However,**

**since a virus would like to survive and needs a host to do so, the HIGHEST EVOLUTION LEVEL is that virus which is not noticed and which is simply housed as an inconspicuous guest for life.**

These are the so-called 3-day fevers that children go through. The little guests then stay hidden somewhere inside us for the rest of our time together and be like that unobtrusively that I have already forgotten their names again because they simply are uninteresting.

...

I'm not sure what's more terrifying about this horror scenario on page 61:

The lack of knowledge in virology at the level of a minor in the fifth semester, the to be revealed here, or the extremely improbable to the impossible Scenario itself that Ugur imagined.

"Should the "Project Lightspeed" turn out to be a non-starter, "a very difficult situation for our company." (p. 62).

**BioNTech is already sitting on 400 million debt at this point, is from Dependent on venture capital, they know that the Smurfing simply has to be a financial success or they're screwed. (Moderna is in a similar position at the time.) Except... what they haven't considered, if you bring a deadly drug to market, no matter how lucrative it may be in the short term, that's also the end of the company, long term , At least I hope so!**

This may be compounded by pressure exerted at the JP Morgan conference.

**That may have created a tunnel vision to do whatever it takes to save this company, no matter what the cost, including countless lives.**

At this point, on p. 63, Sierk Poetting, a trained physicist and CFO, enters from BioNTech, who used to be a management consultant for McKinsey & Co and also has a hero complex, the stage. Sierk always wanted to be an astronaut and at the ... be part of the moon landing (p. 63). So he also has a hero complex and just as little common sense as his boss, because he says "Ugur has usually right [...] so we thought, "So let's support him." THAT sounded to me

**Page 55 rather different, usually right about that.**

On page 64, the disaster finally takes its course, because "Poetting took care of the supply chains and production capacities, he also managed the war chest."

Poetting is a physicist! The physicists I knew at university have technical and Consumables exchanged for travel funds at a rate of 1:7 (there was a separate Accounting necessary, which virtually reverses this exchange for the year-end reports made) because they didn't know anything about chemicals, because they just didn't do that kind of thing use.

These are either theorists who model or hobbyists who build big things like the Cern in Switzerland or Tesla coils. Therefore, physicists also know the difference the chemical purity levels do not. First of all, they (don't) know the difference between biotech grade (only for experiments and never ever for living beings) and pharmaceutical grade (the "good" stuff for drugs). This difference is also

Unfortunately, lawyers are usually not aware of this.

Why was I talking my mouth off when the safety data sheets from ALC-0315 was floating around on Telegram and I pointed out to them that they were can wipe your butt with a safety data sheet in biotech grade as these purity level for humans and animals is generally not permitted[27].

**To date, there is not a single MSDS of these lipids (ALC-0315 and SM-102) in pharmaceutical grade... why? Do these lipids even exist? pharmaceutical quality?**

We will come to that at a later point in time, just a little predictive here

priming to raise awareness of the problem that begins at this point, along with the inappropriate war rhetoric that Novartis also used at one point in its promotional folders, which sickened me. On the other hand... the Pharmaceutical industry as a warmonger, somehow fits again, I'll just say IG Colors.

"Özlem was responsible for the scientific work and the clinical studies." (p. 64). Page 64 is quite practical, should processes ever arise, because it is already documented here in black and white who was responsible for what.

"BioNTech, which was approved years before the outbreak of the coronavirus Medicines had been removed for marketing issues and Commercialization only one employee. All in all, the company had no experience in sales, marketing or media relations." (p. 66) No experience **with studies, no experience with marketing, no experience with marketing or media work, no experience with nothing. This common thread of ignorance and incompetence in all areas, which began at the technical level in Chapter 1, is seamlessly continued here.** In this case, however, the company was given advertising support by the federal government. As we know, even if it was generally only for vaccinations in general and not for a specific product that was advertised, which according to the Medicines Advertising Act for prescription drugs or drugs for notifiable diseases (and that was Corona) is prohibited anyway[28]. This again underlines the incompetence and ignorance of the protagonists, because why do they think about PR when they are not allowed to advertise at all and certainly not address the patient directly with their advertising?

Not even these basics, which every pharmaceutical representative and every practicing doctor need

knows (he must keep the Pharma's advertising material inaccessible to patients).

Ugur or anyone else in the company.

**Working with professionals might have helped, but as mentioned, a startup rarely gets professionals.**

After all, the company has contacts with Pfizer because it has been working with Pfizer since 2018

researching previously (unsuccessful) influenza vaccines and other (unsuccessful) vaccines.

So, on page 67, Ugur contacts an old pharmaceutical hand at Pfizer.

Philipp Dormitzer is ex-Novartis Grippefuzzi and at this point he is now scientific board member at Pfizer USA for virus vaccines and at the same time US vice president of the

company. A professional, in contrast to Ugur and all the rest at BioNTech.

**"Guys [...] this isn't going to work."** Philip Dormitzer was an old hand in the industry, was involved in the projects of the Swiss division at Novartis organized outbreaks of influenza epidemics and had the discussions there about Vaccines against SARS and MERS carried. (p. 67)"

**Let's check Dormitzer's experienced statement from page 67 from the perspective of February 2023 to see whether he was perhaps right spontaneously.**

**1. Both pathogens could be brought under control through hygiene measures before the projects were started, and Dormitzer thought it would be the same in the case of SARS-CoV-2. - Correct.**

The mini-pandemic was already over before/during the first lockdown[29] [30] and was only through fake tests, not between the flu and Corona were able to distinguish artificially alive. A test that should be able to and Grandly announced by Roche, as far as I know it never made it to market

brought[31]. And since this test was advertised great in December 2021, can it can be assumed that all previous tests did not distinguish between influenza and corona could distinguish. That probably led to the alleged disappearance of the mean Influenza passed in those years, at least on paper. Quite apart from the endless lists of potential cross-reactions of the rapid tests to countless others common cold. False positive test, I hear you trapping.

**2. Also, experience had taught him that vaccines are always late, even when proven technologies can be used. - Correct.**

It has already been treated into a whole different spike mutant "wave".

The Alpha tribe against which the Smurfing was developed existed at the time of the eugenics experiment no longer and was thus already extinct[32]. It was sprayed wildly against a type of virus that no longer exists. Interestingly the new variants appeared in the places/countries where BioNTech and Pfizer carried out their smurfing experiments because this naturally exposed the virus evolutionary pressures were exerted that forced it to evade them. That is Basic knowledge of first semester zoology or common sense, the pressure is known to generate back pressure or shoddy vaccines cause a virus to mutate [33] [34].

**3. "BioNTech's mRNA platforms have not previously been in clinical trials for infectious diseases have been tested, he stressed, and there was no evidence to suggest they could be faster than the course of the pandemic. [...] they all agree that BioNTech's technology is simply not mature enough for this challenge." (p. 67f) – correct.**

Alpha was already dead, gone, extinct, they were slower and the Be careful, which he urges here, because there are no clinical trials yet also of the caution and foresight of an old hand. What Ugur NATURALLY ignores, **because he knows better, as always.**

**There is also a simple principle in epidemiology: "NEVER VACCINATE INTO A PANDEMIC!!!",**He might have been able to mention that while he was there[35].

"Understood by Pfizer's rejection, Ugur began to focus on his next task

Focus list: dialogue with regulatory authorities. (p. 68) "I have this

Feeling that another personality pattern of Ugur is beginning to emerge here:

Good advice from people with experience will be ignored if it's not in your hands fit stuff.

In Chapter 1 I conceded to Joe that he could understand the difference between modRNA, which he later discusses and willfully does not produce mRNA and does not explain. But up

Page 69 come up with doubts as to whether he sees the connection between the chapters and thus

between modRNA and mRNA itself really understood. The chapter where between is differentiated between these variants, perhaps came later (additionally. Did he have the) (therefore) not able to establish a connection intellectually? And even if Joe didn't understand it, Ugur and Özlem would at least have it at this point on page 69 have to correct.

"The regulation of mRNA drugs had changed slowly over the decades further developed. At the end of the 1990s, nucleic acid agents [...] were developed by the American Food and Drug Administration (FDA, Food and Drug Administration) and the European Medicines Agency (EMA, European Medicines Agency) are still generally classified as "gene therapies". This categorization became the subject of hysterical comments from opponents of vaccination [...]. There was Horror stories about genetic engineering processes that leave a lasting mark on the Patients would have left after it was shown that some DNA vaccines

actually changed the genome, albeit completely harmlessly. [...] The messenger RNA, on the other hand, which the body breaks down within minutes after fulfilling its function,

does not cause such changes. Although the molecule enters the cell, it reaches usually not the inside of the cell nucleus, and it is highly unlikely that it is the DNA changes."

**The entire quote is a mixture of brazen lies and slander, and there is no evidence whatsoever** Evidence and citations for the claims made here. Just because a substance is legally re-declared does not change its biological function. The re-declaration of a gene therapy, for purely legal reasons, in a vaccination corresponds to a well-known historical model.

During Lent, a cardinal who didn't want to be a vegetarian for 40 days baptized beavers "carp" because of their scaly tail[36]. Zoologically, the beaver was still a mammal and therefore meat, but legally and religiously it was a fish. However, God is not so easily deceived, Ugur will have to learn that the hard way, along with many millions of his victims. One does not simply win against Mother Nature legally, she judges according to the natural law that cannot be overturned by any human jurisdiction, definition or not. Even Stefan Oelrich, Bayer Management Board member and Charité Supervisory Board member, put this straight and clear at the Berlin World Health Summit at the end of October 2021: "I always like to say: If we had conducted a public survey two years ago - "You would be ready to inject gene or cell therapy into your body?" – we probably would have had a 95% rejection rate." [37] [38]

**In 2012, the federal government also referred to this type of therapy as gene therapy[39]. These strict rules that applied to this type of product were put in place with good reason, and that was because of a very spectacular death in 1999[40][41]. The current head of the Paul Ehrlich Institute (PEI), Klaus Cichutek, who will play a role in this chapter, was tasked with clarifying this.**

Jesse Gelsinger, the 1999 victim, is the most well-known victim of this type of Gene experiments, but there were other less well-known cases like the Crisper **Attempts by Wu Shixiu**[42] [43], an oncologist in which 20 of 21 patients died[44].

Unfortunately, the publication of negative data is traditionally very difficult[45] [46] and you have to formulate everything very positively[47] [48] and hang the big bell of course you'd rather not do something like that.

Such information is also tracked in the databases for clinical trials  
Completion of the study NOT REGISTERED!!!!

Exactly how I would like to ask the little bear (correctly with operators[49]).

"List the campaigns against Russia that did NOT end in disaster for the attacker ended" I would like to ask Ugur "List the gene therapy experiments that were NOT fatal or harmful for the majority (i.e. more than 50%) of the participants".

How many of the embryos probably didn't survive to give birth to 2 Cripser babies could be[50] [51]?

Admittedly, I'm merrily mixing different variants of genetic engineering here mixed up. The Smurfs didn't use Crisper, it used the old one

Adenovirus classic that leads to disaster in 1999 (at AstraZeneca, Johnson&Johnsen/Janssen, Sputnik) and mRNA, which lead to treatment attempts in cystic fibrosis leukemia[52]. At BioNTech, the whole thing is tightened up with modRNA.

The changes are anything but "harmless". The spike gene migrates in Liver cells in cell culture in the cell nucleus within only 6 hours [53] [54] [55] [56]. That was **Pfizer not new that the spike goes into the cell nucleus can be seen from the FRET[57] signal in the "nonclinical Evaluation Report BNT162b2 [mRNA] COVID-19 vaccine**

**(COMIRNATY™)"[58] on site 35[59], but it is not explicitly stated in the text written.** In the nucleus, the spike may prevent repair of double-strand breaks[60]. The spike could also attach to the surface of exosomes be found[61], which is then euphemistically called "New Mechanism of Immune activation by mRNA vaccine".

A new mechanism that Ugur certainly didn't have in mind I guess because it's NEW. In the "good" old days one would quote these Paper Scientifically tread on thin ice because some of this paragraph cited papers have been withdrawn. BUT it is currently the case that scientists at their papers are sometimes put under pressure and forced by controversial data withdraw[62]. The pharmaceutical lobby is powerful and the journals live off it **Pharma advertisements and the glossy copies of the Pharma itself fake studies**, which they send to the doctors as evidence of their non-functioning and partly

distribute harmful chemical broth. Just go to the university library and leaf through it a print version of certain scientific journals and see who's full-page Turns on ads, then you know how to classify the "quality" of this journal.

I now see it as a mark of quality when such controversial papers forced to depublish and thus be censored, because then that was it Result dangerous for the structures behind the genocide. So many go Authors now simply directly via the preprint server, Substack or Researchgate (das partly also deletes "dangerous" literature, as in the case of Rancourt (who tried to estimating smurf deaths) or Montagnier[63] (of the HIV sequences in the spike proved).

However, these papers still circulate as pdf in Telegram channels or, in the case of Nobel laureate Luc Montagnier published in obscure Indian journals, so that it can be accessed via the usual scientific databases such as Pubmed[64] (hosted by the NIH and thus in the middle of Fauci's kingdom).

The random, stable integration of new gene sequences into a genome became earlier used to target oncogenes (i.e. cancer genes) or tumor suppressor genes such as p53 identify. Gene sequences were simply randomly cloned in somewhere, and if so the cell became a cancer cell, a cancer gene had been found or a tumor suppressors destroyed[65]. I guess that should be clear at this point should why it is gaaaaaaaaaaaaanz bad if a gene happens to be somewhere inserted into the genome, i.e. copied in like a pseudo-Latin quote with copy and paste in the middle of a lorem ipsum dolor sit amet, consectetur adipiscing elit[66] text ... An immunologist should also know how oncogenes have historically been identified.

**Quite apart from the fact that the stable integration of the spike gene into the cell nucleus directly**

**as a DNA copy can mean that you now produce this foreign protein for the rest of your (short or at least massively shortened) life.** Harmless is somehow different for me! We are moving here at the level of the lecture "Introduction to Genetics", so nothing really specialized that Ugur should have known already.

If you're wondering if megalomania, incompetence and desperation alone are enough, so Developing a catastrophe like the Covid injections and spreading the word is that Answer: NO!

**It also takes cliques of good old acquaintances who are also unscrupulous and/or are blinded by their belief in technology. In retrospect, a mixture of incompetence and roped parties is quite explosive and rarely ends well. Let's remember 1999 again.**

Who Was Tasked With Solving The Death Of Jesse Gelsinger? Correct! Klaus Cichutek! The one who at the time of this story was boss of honest Paul

Institute (PEI= Paul Ehrlich Institute) is! Just a reminder when we look at the devote to the next passages and begin to dissect the topic of roped parties. "Thanks to the close cooperation with the regulatory authorities, seriously ill patients received

People as part of studies conducted in Europe, America and Australia were, BioNTech's RNA cancer vaccines. [...] The authority (the PEI) [...] had taken two young companies under its wing. CureVac [...] and BioNTech [...] were the world's frontrunners in mRNA research and were just waiting for their to test developments on humans. [...] the authority was decisive in the Involved in developing regulatory frameworks for mRNA vaccines. Over For years, it (the PEI) worked closely with the start-ups with the aim of examining and to ensure that the active substance could be safely administered to people. PEI collaborators co-authored with the mRNA pioneers, including Uğur and Özlem, scientific articles. The couple attended a ceremony organized by the Authority "Research exams" part [...]. Together, the innovators and **Regulators new technologies such as mRNA**(p.70f)."

That sounds really tight and cuddly. The mother hen PEI takes her chicks CureVac and BioNTech under their wings, the warm, soft plumage. What kind of scientific articles have the PEI and BioNTech written together? Look Let's take a closer look at the footnote[67]. It is a publication called "The European Regulatory Environment of RNA-Based Vaccines" i.e. "Die European regulatory environment of RNA-based vaccines". What have the PEI and BioNTech denn da together in 2017 in a book chapter from the series Methods in Molecular Biology Hatched? I also have a chapter for this series of books written, only in another volume, 10 years earlier[68]. This is the kind of book series that Put together habitants because they are publishing two books for their habilitation must. Then you get on your nerves with a few acquaintances and friends, asking if they wouldn't be so kind as to write a chapter, and the doctoral students from the editor's haze fill in the rest (that's how I got my book chapter). That is the background one should have in order to correctly assess the "quality" of this series of books. Some or many of these chapters are pre-publications of partial doctorate results that are still incomplete, some of which will never be published elsewhere. It doesn't have to be be like this in every volume, but will apply to many volumes in this series. Publishers like Springer then make their money with such books, the authors of the book chapters often don't even get a specimen copy and often have to buy their own book chapter if they want it in the printed version (that's why the proofs for proofs can often be found on the authors' websites and not the final product). The authors don't get paid at all. Springer shamelessly exploits the pressure and obligation to publish. After all, the proof of this chapter was enough at the time for me to go to the Frankfurter on the non-public days for trade visitors book fair allowed. Back when the book fair was still big and diverse and not Small publishers that were not politically acceptable to her were invited[69]. This book chapter by Ugur and Özlem is then also correspondingly unspectacular, how as you would expect from this book series. Ultimately just a review (i.e. a review article) on the legal regulations for the approval of mRNA products. On p. 209 you can find the basics that Ugur use would in order to get his lethal injection approved. Or does the EMA have that Product commissioned by the DOD (Department of Defense = US Department of Defense) punched through[70] [71] [72]? The article roughly states on p. 209 that in addition to the regular, centralized approval by the EMA also an approval without complete data a so-called "conditional marketing authorization" under the condition that the

The risk:benefit ratio is positive according to the EMA (which of course it was after consultation with the FDA (USA) and MHRA (UK)). This is only possible with products for which there are no alternative treatment options such as e.g. E.g. hydroxychloroquine or ivermectin in the case of Chinese flu.

Could it perhaps be because these safe, simple, cheap has made medication bad because of this and has made access very difficult, or even got them at customs if you tried them from other countries ah to import to Germany?

Sounds somehow like more rope teams or technically correct: regulatory capture (Definition on Wikipedia: "Regulatory capture".

**regulator) is a form of political corruption that occurs when Regulators or policy makers are misused to advance the commercial, ideological, or political goals of a small interest group (lobby) or to prioritize them over the common good. Regulatory capture represents a form of state failure. Affected authorities are also referred to as "captured authorities"..")**[73]

"Ugur had a collegial relationship with its president, the biochemist Klaus Cichutek. [...] On Tuesday [...] Ugur picked up the phone and called Cichutek directly." (p. 71)

Male friendships are a wonderful thing. "In his phone conversation with Cichutek Ugur emphasized that he takes the outbreak of the coronavirus extremely seriously[...]" (p. 71).

Did Ugur Klaus put this flea in his ear because he "was just (waiting) for (his) to test developments on humans"? Since he now saw a way of using this special way of EU approval, which incidentally refers to mRNA and not to modRNA, which was not even covered by the regulations? So I see it anyway. The EU assumed that mRNA does not go into the cell nucleus and is therefore not gene therapy. Were they aware of the difference between mRNA and modRNA?

Or did they know and they didn't care because the EU and especially Germany, when vassal of the US who had to obey orders from the DOD?

"An early pioneer of experimental therapies, Cichutek pledged to do everything possible to...

help" (p. 72) and Ugur knew "With the "good will" of the approval authorities, had Ugur said to colleagues, syringes could be used worldwide by the end of the year [...] benefit people" (p. 72). The "good will" was the positive assessment by the Commission before Flintenuschi (aka. Ursula von den Leinen eh Leyen), who for their [IRONY] incorruptibility[74] and aversion to nepotism[75] known [/irony]. Flintenuschi was then promised away to the EU, where she, without ever even to have stood for election, took power over the EU. What can there already go wrong [76] [77]?

"Like in a courtroom, experts like those from the PEI can freely interpret their "paragraphs" within certain limits, as long as you provide them with a convincing argument and back it up with scientific data." (p. 74) I do ask myself, why laws at all and paragraphs, if the PEI can then do whatever it wants? Especially since with "convincing arguments" the data falsification (which occurred massively in the later studies[78]) is wide open.

**If the person opposite the PEI has no idea about the corresponding underlying biology, you can sell them everything as safe and effective, because they don't even notice how they are being "ripped off" from start to finish with nice words and explanations that sound silly and clever.**

**Especially since Klaus Ciuchutek also has a rather short memory and has certainly forgotten the name of Jesse Gelsinger and his unpleasantly annoying death, which stopped and "overregulated" gene therapy for years.**

**“The company (BioNTech) had never used this formulation to inject into human muscle. (p.75)” has no clinical data, no toxicological data or any data at all. But whatever.**“Microscopically small fat globules, so-called lipid nanoparticles, have been used to introduce DNA into cell cultures since the 1990s. (p. 75)”

This is how big the difference between (animal) cell cultures from just one cell type can be mostly robust cancer cells and an organism with different cell types and their complex interaction can't be. Besides, fat is fat. Or yes

**not?**Why is the WHO whining so much about trans fatty acids[79] when it really is it doesn't matter which industrial fats are used for the lipid globules. ...

**Although it has been known since 2013 at the latest that nanoparticles can cause blood clots[80], in practical terms a cell culture does not have the problem because it simply has no cardiovascular system and no blood either.**

**Incidentally, in 2017 it was known that nanolipids are highly inflammatory[81] (i.e. cause inflammation).**

“The team had achieved a major breakthrough several years earlier when it Nanoparticles developed for use intravenously, that is, with a needle mRNA vaccines injected directly into veins. lipid formulations that directly into the bloodstream are particularly difficult to develop since they are instantaneously distribute throughout the blood vessel system and ensure it must ensure that she does not have an allergic reaction or even an anaphylactic shock trigger. (p.76)”

**Here again, where it gets exciting, the footnote with the number of the study or at least a reference to the publication in which this data was ultimately published is missing.**

**Did the test subjects survive? The sentence “. Lipid formulations that go directly into the bloodstream are particularly difficult to develop because they are instantaneously distributed throughout the vascular system.” This is exactly what happened with the Covid lethal injections, which were supposed to remain in the muscle. Kinda stupid, I guess.**

**It was known that this was a very great danger and autopsies have now been carried out**

**showed that the ALC-0315 used and thus the spike-generating modRNA are distributed throughout the body in various organs [82] [83] [84] [85] [86]. But why data?**

**raise?**

ALC-0315 will behave quite differently than other cationic nanolipids because... well, why? Because Ugur wants it that way and his will shapes the world the way he wants it, just like Pippi Longstocking sings: "Two times three makes four, widewidewhite and three makes nine, I make the world, widewide as I like it." Two Times three makes four, according to this motto or this kind of twisted mathematics (possibly based on a correspondence course in mathematics that was not really understood in the 1980s), the clinical trials were then finally carried out.

At the time, Ugur already knew that “the vaccine would affect billions of people worldwide must be administered at makeshift vaccination centers (p. 67)” I wonder where he who already knew at this early stage? Maybe because of knowing that -80°C is rather impractical for general practitioners' practices, since -80°C refrigerators are large, noisy and

are very expensive? You don't always have to assume evil motives. so mean not even me, ... or yes, sometimes yes.

"For this purpose, an injection into the arm muscle was a viable option. BioNTech conducted research on intramuscular lipid formulations. But since there was no reason had to prioritize these, no provision had been made to clinically in

employ people. So the researchers at BioNTech didn't have any procedures for that Manufacturing developed in clean rooms. Setting it up again would take too long. The **Ugur and Özlem's team had to find a way to present an existing lipid formulation to the Paul Ehrlich Institute that had already been used by the drug authorities had been approved. (p.77)"**

**THAT should have been impossible, because as far as I know there weren't any Lipid Formulation Ever Approved for Humans!**

The history of cationic nanolipids is long and intricate and full Misunderstandings, but somehow all manufacturers are with each other and with their respective

Governments connected e.g. E.g. through the Bayh-Dole Act in the case of the US government. "The

Bayh-Dole Act, also Patent and Trademark Law Amendments Act or Bayh-Dole Act called, is a law in the United States that regulates facilities where

Research work to be conducted with the help of federal funds has the right to exploitation of the research results.[87]" The government, which the project out

which the invention arose may also have a non-exclusive license

apply for. These cationic nanolipids are licensed and patented

Minefield that you laid on your opponents from the start. The manufacturing companies have happily sued each other and have been sued by licensees like Moderna.

The situation is confusing to say the least and most threads lead to

Acuitas in Canada.

If you want to know exactly, you can read about it in the substack by Liam Sturgess[88].

His article is likely to be even longer and more detailed than this chapter. He covers the history of mRNA and nanolipids from gaaaaaaaanz from the beginning, but unfortunately in English.

The only company Ugur could be referring to here that is doing clinical trials with mRNA and

modRNA in lipid vesicles is Moderna. Whitney Webb has met

dealt with this disaster in detail in three articles, so I won't go here

in detail. If you want to know exactly, you can read about it in Whitney Webb's

Three-part book on Moderna[89]. I limit myself here to the "highlights" of her research on the topic of nanolipid toxicity in a simple and hopefully understandable way.

Moderna also has a problem with its nanolipids. Quite apart from the fact that they are at were stupid in the license negotiations and then started against

to sue Acuitas. Unfortunately, the lipids were so toxic that they were not suitable for to be administered to a patient at regular intervals. It had itself

Moderna actually chose a very simple disease as a proof of principle:

The Crigler-Najjar syndrome[90]. A simple genetic defect in which an enzyme in the liver is broken or missing. So you would just have to pass through mRNA of this enzyme in the liver

form and the problem is solved in no time. Since the cationic nanolipids are already in

Landing in the liver is also not a problem with correct addressing. The problem

was that not enough enzyme was produced and you had to inject it regularly

had to (which would have been good for business). But the nanolipids from Acuitas were too toxic for repeated use, which somehow wasn't optimal in

combination with the problem to be solved. Quite apart from that, Bancel had told Forbes that the Acuitas nanolipids were not very good[91] [92]. Then, in 2018, they grab onto p.

33

to the Exchange Commission a little clearer: "Most of our

Investigational drugs are formulated and administered in a LNP [lipid nanoparticle], which may result in systemic side effects related to the components of the LNP that may not yet have been tested in humans.

Although we have continued to optimize our LNPs, there is no guarantee that our LNPs will not have undesirable effects. Our LNPs could contribute, in whole or in part, to one or more of the following responses: immune responses, infusion responses, complement responses, opsonization responses, antibody responses including IgA, IgM, IgE, or IgG or a combination thereof, or responses to the PEG of some lipids or PEG that otherwise associated with the LNP. Certain aspects of our investigational drugs may elicit immune responses from either the mRNA or lipid, as well as side effects within the liver pathways or degradation of the mRNA or LNP that may result in significant adverse events in one or more of our clinical trials.[93] [94]"

I won't go into the ugly medical details of the reactions here now, which are described here. ALL ugly! You definitely don't want all that.

**Unfortunately, these effects are now well known from the Covid smurfs.**

**AND THAT'S JUST THE NANOLIPIDS!** The content is not meant here, it can also cause additional damage.

**Exactly these Acuitas nanolipids, which Ugur wants to foist on the PEI at this point as approved and clinically tested** with some help from the head of Acuitas named Tom Madden[95]. Tom, of course, has no bias and will be his

Of course, he sees lipids critically and he doesn't have any dollar signs in his eyes when on

thinks about the future of his company if the deal goes through.

"In the case of the Covid-19 vaccine, it was the spike-

Protein. In relation to the drug authorities, the most important fact was that the Acuitas lipids have already been used in human studies and their Tolerability had been shown on test subjects."

**Have fun proving that is all I can say.** But somehow he managed it

PEI to lie the sky and to withhold a few little things. such as Eg the revusiran disaster that forced Alnylam to use mRNA therapy for a congenital heart disease quickly stamped out because they were probably the test subjects

killed[96] [97]. Or the disaster for Arbutus and their RNAi vaccine against

hepatitis B, which allegedly caused the patients to have hepatitis B

developed[98]. Moderna also had obvious security problems [99] with its products and was in as bad a financial position as BioNTech at the time this chapter was written. Both Moderna and BioNTech were supposed to solve the safety problem in exactly the same way: speeding up and skipping the safety studies in animals so that they couldn't generate safety signals that had previously caused problems for Moderna in animal testing. You only find what you are looking for.

If you deliberately look the other way..." The most time-consuming part in the early stages of vaccine development are toxicological studies, in which the active substance is tested in mammals – usually mice or rats – for its tolerability. (p.81)". Five months that you simply saved yourself, who needs toxicological studies anyway?

**Pfizer also cheekily wrote that in its approval documents! No one can say they didn't know:**"The toxicity of the LNP formulation or the new excipients alone was not

specifically investigated [100]" The reason given was that there were chemically similar compounds and those in orphan drugs

(Drugs for super rare diseases, they too have eased

Admission conditions, because otherwise the patients would have no treatment at all) as Onpattro would be allowed. Why bother testing each chemical individually? is fat

Fat, okay, stop stressing about some chemicals on them the LD50 (the dose at which 50% of the test animals die) has not been determined and whose toxicity has never been studied by anyone. The subordinate clause **"the Structures of ALC-0315 and DLin-MC3-DMA are not similar."** Right after the **Claim that no toxicity test would be carried out BECAUSE the structures would be similar.**

It really says so in the documents that were submitted to the authorities.

If these documents are not read, that's just bad luck. You have at least in nothing obscured in this connection, because they probably knew from somewhere that they still get away with it.

Just as a summary of how absurdly brazen the procedure was here. ALC-0315, the cationic nanolipid that BioNTech Pfizer appears to have sold to the PEI as safe, was reported by Moderna, like all Acuitas nanolipids, to be fair and problematic because they cannot get the security problems under control have. That would have almost ruined the company if Corona Moderna didn't do the same would have saved my financial ass like BioNTech. With this one from Moderna as too insecure

**discontinued Acuitas Nanolipid, BioNTech mixes up its lethal injection and then writes in the approval documents that they don't need any toxicological studies.** They're comparing it to a completely different, approved nanolipid that has a completely different structure and is part of an RNAi therapy (just in case anyone here accuses me of comparing apples to oranges). If Pfizer is allowed to lump all forms of gene therapy and all forms of nanolipids into one pot, then I'm even more allowed to do so. In this book, too, Joe simply claims, probably in the hope that it will none will review "The company would do the preclinical toxicology studies Conduct parallel to the phase I study and if any irregularities are observed there the clinical study could still be paused. (p. 85)"

**As the Australian FOIA documents clearly state that there are no toxicological There were no studies (also no genotoxicity studies (damage to the genetic material), no carcinogenicity studies (whether the stuff might cause cancer[101]), none**

**Immunotoxicity studies (whether it might be related to VAIDS or other immunological**

**derailments could occur)[102]. All badass, who needs such data when it comes to preventing a cold that could hardly be dangerous for anyone under 80? In addition, Özlem p. 86 says, "However, given our previous clinical experience with mRNA vaccines, we felt that the toxicological study in animals would not tell us much more than we already knew."**

No more questions your honor.

She probably can't tell mRNA from modRNA either, and might be playing on it indicate that the results of animal experiments only apply to humans to a limited extent are transferrable. BUT a safety signal is a safety signal. If a rat Rat poison eats and dies, it can be assumed that it is for humans certainly should not be released for consumption.

"Ugur and Özlem knew that the authorities had discretion. If submitted a convincing plan to the PEI, it could well be that the Experts agreed. (p.82)" The PEI then probably turned a blind eye and its own Maximum scope for discretion in interpreting the regulations or as provided in the The book is so beautifully called "(The) PEI (can) freely change its "paragraphs" within certain limits

interpret, as long as you give them a convincing argument and it with

scientific data. (p.74)”

As for “experts” who are also happy to be anonymously reported by the MSM media (Main Stream Media, the

propaganda slingers financed by fines) are used in their

Expertise is good, we have been able to experience the last 3 years, especially that unnamed experts from informed sources. Eventually anyway

It doesn't matter at all, because with the "Regulation to ensure the supply of the

**Population with products of medical need in the epidemic caused by the coronavirus SARS-CoV-2[103]" the Bundestag gave the PEI and all authorities involved a free pass anyway, all rules that were ever issued to protect patients for the smurf substances ignore and kick. leaflet? Pollution, save the trees, nobody will let them anyway. expiry date? what,** smell it once if it's still OK (if the lungs[104] and the cornea[105] are burned afterwards, it was still fresh enough) and put it in your arm.

“Ultimately, the PEI experts and BioNTech were unaware of the risks of a accelerated procedure, but about the benefits. (p. 86) “These are them

**Advantages if you have grown as a company under the wing of the PEI.** You know each other, you understand each other and you agree. Rather, the only concern seems to be "whether the pandemic will prove so deadly that clinical trials would have to be scrapped and an untested vaccine administered to avoid wiping out much of the world's population. (p. 87)"

Here I'm already wondering what madness Ugur has fallen into or what he's doing in his smoked a hookah. A potentially deadly drug that mankind

**can and will perhaps partially wipe out use untested to fight a more severe flu epidemic (...) because flu vaccines don't work or have only a minimal effect and Cochrane has known that for years[106]..** What does Ugur actually dream about at night?

From this point on page 82, chapter 2 finally becomes abstruse. Joe starts historical To enumerate accidents in vaccine production, probably intended as a contrast to ingenuity

and freedom from side effects of the BioNTech spray mixture (which unfortunately really backwards

goes off and degenerates into more of an underscoring of Ugur's hubris). He lists that

**Cutter accident**from 1955 (p.82), where a contaminated polio vaccine children min polio infected and killed (not to mention that the polio vaccine was still around until well into

the year 2000 was contaminated with any SV-40 monkey virus because the vaccine in monkey kidney cells were cultured. This SV-40 monkey virus resolves after decades the vaccinated cancer. That was even reflected in 2004[107]. The censor was probably there

pee briefly[108] when it went online at the time).

Joe also claims that the 1957 flu vaccine saved millions of lives

(p.86f). You see it differently at Cochrane, they talk about flu vaccines completely that they save lives. One can see a moderate effect of infection reduction

observe[109], but that's about it. Nothing with millions of lives saved. cochrane worded carefully and politely, but the protective effect is minimal, very minimal. I suspect vitamin D + zinc + quercetin should have a higher protective effect than one flu shot.

When it comes to the swine flu vaccination, Joe S.87 “forgets” to mention that

**caused this narcolepsy[110]** and had to be withdrawn quickly when there were deaths. Even Der Spiegel admitted that the manufacturer simply ignored safety signals[111].

What do we learn from the Pandemrix disaster? That the manufacturers do not learn from their mistakes. That profit over human lives. And that people are generally not able to draw lessons from history.

Joe even mentions the Nuremberg Codex (that conspiracy conjurer) p.83 and alternative treatments for Covid (but omits ivermectin and Hydroxychloroquine), which "showed promising results in early studies, but the were not made available to patients."

**Why do you think they were not made accessible? The expensive deadly Kidney-destroying remdesivir[112] developed by Baric (Baric again) was made available by force and many patients were forced to euthanize themselves against their will instead of being treated with the much cheaper ivermectin, which would have really helped them.**

To underline the safety of the BioNTech broth, Joe S.84 even counts failed clinical trials that have resulted in people dying and being stopped had to. Here, too, probably with the intention of showing how great the smurfing in the direct comparison would be because "These two experimental means used the biological process. Vaccines, especially the mRNA-based ones, don't do that - rather, they mimic natural contagion."

**I'm not sure now how Joe usually catches a cold naturally. I don't usually get infected by...**inject the respiratory infection into my bloodstream. Maybe I'm just doing something wrong, that I inhale the pathogen, it infects my mucous membranes in the nose and throat, kills the cells there and encourages the immune system to produce IGA (antibody type found in the mucous membranes). What could be more natural than injecting a respiratory tract infection into the blood and thus simulating sepsis (blood poisoning), i.e. the worst possible accident of a cold, in order to prevent a cold, quite apart from the fact that after a vaccination no IGA, but other types of antibodies are formed, which are NOT active in the mucous membranes. You usually learn that in immunobiology and Ugur should know that too.

This chapter leaves me shaken by the cronyism, quite frankly described fraud and the omission of facts for the purpose of manipulation of the reader.

Incompetence paired with insanity and insane delusions potentiated by rope teams.

Dissecting and filleting this chapter in detail took me a week of my life tasted I hope it was worth it too.

If you don't feel like annoying substack emails, you can simply use my Telegram Subscribe to the channel ([https://t.me/DrBines\\_verbales\\_Vitriol](https://t.me/DrBines_verbales_Vitriol)) as I grab the link to customize

### Part 4 (quote):

"Project Lightspeed - [IRONY]Working with professionals once[/  
IRONY] Part 4

Absolutely not uncalculable imponderables

By DrBine • February 27, 2023

After breaking the hundred footer mark in the analysis of Chapter 2

I'll take it a little easier this chapter 3, I promise. By simply

blaspheme in a relaxed and venomous way, just for a change, as is the plan for everyone  
Chapter was, what was already the case with the first two chapters, unfortunately for  
satirical reasons

went pretty wrong. Actually, I didn't want one with too much science right in  
into deep sleep or into a scientifically induced coma.

I wonder if I'm in the process of developing a new literary form here: The  
scientifically proven real satire as a subgenre of laboratory literature[1] [2]. yes there is one  
rather unknown literary genre the so-called Lab Lit, the list of books this  
Genres is still very clear[3].

In Chapter 3, we learn more about the (lovable) quirks of the misjudged genius

Ugur. After Ugur in Chapter 2 with his dusty math knowledge

had calculated a plandemic from the correspondence course in mathematics from 1980,  
he came to

concluding: "A global pandemic was in the making, and not a nonclinical method  
– whether washing hands, wearing masks, quarantines or lockdowns – she could  
sustainably (p. 53)."

And because the situation is so incredibly dangerous, he flies with his family first  
on vacation. Because "Ugur (was) sure that there was a risk of contracting this virus  
Infecting would be bigger in a shopping mall than on the beach in Lanzarote, so long  
corresponding measures would not be introduced in Germany (p.92)."

Maybe I'm just too stupid to understand what the security measures in  
Germany dealing with security on a Lanzarote beach. What exactly  
put it on the beach of Lanzarote if there are any rules in Germany  
which is not kept in Lanzarote?

To understand that, you probably need the IQ of an unrecognized genius like  
Ugur.

Do you remember how they cordoned off the beaches[4] [5] or playgrounds[6] around that  
Getting the risk of infection under control in the open air? The police cars in  
Freiburg even patrolled playgrounds to enforce this and if necessary  
to distribute penalties.

Klabauterbach has now admitted to Lanz that the measures were taken outdoors  
Heaven chess sense were[7] but this nonsense was still used to

Monday walks with folding rule the distance between the participants

enforce. In addition, this nonsense was used as a pretext for protests and demos  
or to ban Monday walks because it was foreseeable that one would not adhere to them  
idiotic corona rules[8]. One forced demo participants under the open

Hell, stupid way to wear masks. Too many participants refused  
the entire demo train was stopped because of this nonsense and with the

Dissolution of the demonstration threatened. That's what I experienced at the demo in Freiburg.

Whoever wore his mask under his nose was treated with an administrative offence, because of this nonsense.

The lawsuits are still ongoing today (02/2023), when one day before the end of the Mask duty rebelled against this nonsense and refused to take the place of the old one Leaving synagogue, a public place! You were allowed to go to the mall, but just to buy groceries. If you had bought a book you would certainly be hooked Corona died or would have sentenced his neighbor to death, especially when Vaccination refusers because the virus is super smart and could tell whether you Buy pasta or a book. But buying books online was OK despite the virus could theoretically be carried around by the postman and that over Significantly longer distances than if you just book the local mall would have bought.

Incidentally, the virus could also tell whether you were in the restaurant (mask requirement) or sat (no mask requirement). Sitting down you could follow this logic So not contagious, but only standing, but wheelchair users also had to Wear a mask or in public transport you had to be masked both sitting and standing, even when the mask requirement had already fallen almost everywhere else. Bullshit, everything

bullshit. Nowadays, however, nonsense is already enough for complete restriction of civil and human rights. Imagine if there really was one real reason and not just nonsense as justification. How would they

Rule fetishists, Coronazis and witnesses of Corona first go there and live it out.

BUT before Ugur goes on holiday as a potential superspreader (like the skiers in Ischgl[9]) on February 13, 2020 on page 82 at BioNTech

Big event of the whole company in the town hall in the old post warehouse in Mainz which at least 1300 employees took part. "He knew lockdowns would inevitably come and that this is therefore probably the last opportunity was to personally get his people excited about a project (p. 94)." One of the themes was "If no new money came in, Poetting said, the funds would be mid-2021 used up (p. 93)."

The tiresome lockdowns again and the financially ugly situation of the biotech crib.

Where did Ugur get this fixed idea from? I would really like to know.

It was clear early on that lockdowns won't do anything and ultimately they didn't do anything

than to cause economic and psychological harm[10]. Even with pure intuitive common sense was seen in the negative control in Sweden. Which all Swedes who refused to take action were clearly on the right track, however woe betide you mentioned that to a witness of Corona. Then you got verbal lynched and I've personally experienced that more than once.

The Deutsche Journaille wrote against this evidence and incited their Soros financed[11] fact-checkers against everything that goes against the belief in their new God Corona objectively argued.

They raised a saint named Corona, the patron saint against plagues and at the same time also patron saint of money, butchers and treasure hunters to her new god. Kind of fitting when you look back on it. corona

became a cult[12] to which one belonged or not and Ugur became one their high priest, who consecrates the faithful, and thus admits them into the community of believers through vaccination, although not personally but through holy men, women, nonbinaries, trans people and politicians like Klabauterbach[13] himself in white coats.

Who do you think will administer the last rites to these believers?

Here we also FINALLY find out which variables Ugur calculated with. "His Assessment of the global transport routes and available data on the transmission of the Virus was sober: This pathogen could be up to 0.3 percent, if not as much killing three out of 100 of those infected, he told the congregation. The peak of global spread would probably not be achieved before June. Since there is neither vaccines are still effective treatments, the world faces a pandemic before that could claim up to three million lives. He added that BioNTech in Considering the potential of their own technology, there is a moral obligation to embrace the counteract the emerging threat." (p.94)

Ugur is not only a math genius, he can also handle the worldwide transport routes analyze in detail on the side or maybe he has Where is George[14] [15] or Plague Inc[16] used, the (in my opinion boring) epidemic simulation?

We'll probably never know. At its 0.3 - 3% so-called infection fatality rate he also fails to derive the numbers.

It is also only a factor of 10, which he specifies here as a range. Further Is he wrong about the peak of the pandemic in June? It was just before that first German lockdown[17] [18] in March 2020 and even if it was correct with June had been, what would have been the use of a vaccination in winter?

If he was already expecting the climax in 4 months, i.e. in June, he could Stop work at this point and simply take the wave around the world roll. And while he's at it, he's simply omitting chloroquine[19] as since 2005 known treatment option against corona viruses. And if all that Should the motivation of the employees not suffice, he will immediately knock them out well-known moral club on top.

We're approaching an area of the book where I don't really need to write anything, but only want to shorten what is "unimportant". The real satire writes itself between Page 96 and 101 practically by itself. Therefore, I will only after the compilation comment so as not to ruin the self-exposing effect of the original text. So nicely summarized, I couldn't have done it better.

At the time of the Town Hall Meeting, before the holiday in Lanzarote, Ugur and Özlem already that:

1. "What is particularly frustrating for scientists is the fact that it is about also mutated extraordinarily quickly. This makes it very difficult to find an antigen define a target structure that is presented to the immune system as a profile so that it knows which intruder to act against." (S 96)

2. "As anyone who gets a cold in September can attest, this is it Science has not been able to create a vaccine against the common cold develop, caused by dozens of different strains of rhinoviruses and coronaviruses that are too diverse to be addressed with a single vaccination could be fought." (p. 97)

3. "[...] that given the mild symptoms of these diseases, no major ones either Efforts have been made to develop vaccines against these viruses." (p. 97)

4. "BioNTech [...] staked its reputation on a worst-case vaccine could do more harm than good." (p.99)

5. "Each year, millions of infants are hospitalized for the virus delivered. So the vaccine was supposed to be a medical breakthrough. But what ensued was one of the greatest setbacks in clinical history pharmaceutical vaccine development. About 80 percent of vaccinated children became seriously ill after contact with RSV. Two children died. Instead of the virus too

neutralize it, the vaccine seemed to enhance its effect.[20]" (p. 99)

6. "In 2005, he read, Canadian researchers had developed a vaccine based on a non-hazardous poxvirus vector, which contains the information for the spike protein, those knobbly protuberances that give the pathogen the appearance of a Crown and attach to the receptors of the lung cells. The vaccine was tested on ferrets and it was found that not only did he not have the disease protected. On the contrary: The vaccinated animals, which subsequently became infected with the virus,

showed far worse disease progression than those in the control group.[21]" (p. 100)

7. "Severe Acute Lung Injury was also identified by a research team in Hong Kong observed testing a vaccine on Chinese rhesus monkeys.[22]" (p. 100)

8. "Animal experiments with mice and rabbits, in which a vaccine against the MERS virus, the successor to the original SARS virus, also performed catastrophic.[23]" (p. 100)

"The slightest inaccuracy in the development of a new prophylactic drug could prove fatal. Researchers had tried this for years pitfall, mostly through trial and error. But this time had BioNTech does not. It had exactly one chance to develop an emergency vaccine before the virus had spread too far to stop. (p. 101)" [...] "The mantra was: "First the fastest, then the best." BioNTech wouldn't hit the perfect construct wait. The task was to identify the antigen and those mRNA Identify platforms that could deliver a working vaccine, and this one for approval (p. 113)"

"In conversation with two of his closest associates [...] Ugur had three options shown.

The first and most optimistic (emphasis mine) was the assumption that company was lucky (emphasis mine) - already the first version of his Vaccine designs, no matter how simplistic, would not become ADE or otherwise lead to serious events.

On the other hand, the second and most pessimistic (emphasis mine) was that the Vaccine against SARS-CoV-2 would cause ADE, regardless of what one took to prevent this.

The third, and most exciting to the scientist soul (emphasis mine) was, that a carefully designed (my emphasis) vaccine avoids these risks would.

"We will design different candidates," said Ugur, "then the trials do it and see what the data tells us." (p. 101)

I'll let that sink in for now.

Take a deep breath.

Get coffee/tea or something alcoholic!

Let's do the reality check in February 2023 (excerpts about which were I've written entire books and I bet there will be many, many, many more detailed books are written about it, covering every single aspect neatly be dissected).

Regarding 1) The spike mutated massively after the injection tests, as is to be expected was. Evolutionary pressure creates counter-pressure. By the end of 2021 it will be, to put it mildly,

already confusing with the point mutations of the spike protein[24] [25]. Already end In 2020 it was foreseeable that the original Wuhan tribe was already fighting against its descendants had lost[26].

On 2) Ugur's health syringe also looks rather old when it comes to the protective effect:

2021

02/27/21 Vaccinated people are NOT contagious anymore! [27]

08/04/21: High viral load in infected vaccinated [28]

08/20/21: Similar viral load in infected and unvaccinated[29]

21.22.21: Are vaccinated people really as contagious as unvaccinated people?[30]

09/30/21: Viral load as high as in unvaccinated people? What new study for vaccinated means[31]

10/12/21: Vaccinated people are carriers of more infectious and antibody-resistant variants[32]

10/18/21: Walgreen data shows pandemic of the vaccinated[33]

2022

November 1st, 2021: New corona study warns: Vaccinated people more infectious than previously assumed[34]

02/20/22: Data from USA and UK: Covid vaccination significantly more dangerous and deadly than

Corona infection[35]

04/19/22: New study in The Lancet confirms slightly increased mortality in mRNA Vaccination[36]

05/07/22: Covid vaccination worsens immune defense in case of infection[37]

06/19/22: Data from Israel show ineffectiveness of the mRNA vaccines[38]

7/6/22: UK study: "3rd dose vaccine efficacy was from 12/20/2021 negative"[39]

9/1/22: University of Oxford study: Vaccination increases risk of infection by 44 percent[40]

2023

02/15/23: Vaccination booster practically useless[41]

02/16/23: Natural immunity better than vaccination[42]

2/19/23: Fraud in Pfizer pivotal trials[43]

02/19/23: When exactly would the CDC, FDA and PEI have intervened on the Covid vaccines have to?[44]

02/19/23: Vaccination damage: First trial against BioNTech begins in March, others follow[45]

02/25/23: Eurostat: excess mortality in Germany rises to 37 percent[46]

2/26/23: GAME OVER: Medicare data shows the Covid vaccines are the Increase probability of death[47]

And that's just a tiny selection of the horror chronology.

On 3) Covid-19 was never worse than a normal, severe flu epidemic, like every few years.[48]

Ad 4) Yes, Ugur's award-winning medicinal injections produce ADE[49] [50]. ADE is the abbreviation

for antibody dependent enhancement, i.e. when antibodies make an infection worse make.

On 5 and 6) Child mortality has exploded since vaccination of under-15s[51] with a 698% increased infant mortality in Europe alone[52].

"The slightest inaccuracy in the development of a new prophylactic drug could prove fatal."

I hate to repeat myself and remind you of what I said in chapter 1 of this book[53].

Ugur has no idea about corona viruses, has no idea about protein engineering, has no idea about vaccine design, has no idea how to characterize a protein, he has no idea that he has no idea. He has a team that has no clue

has these things. He just hopes to be LUCKY and get it the first time somehow will work. Even if that's for the scientist soul (or rather his Scientist ego?) is very exciting.

I don't think I need to give any more examples on this complex and I can more examples of the disaster and how it all came about save. We will be using it live and in color for the next few months and years confronted. That's too frustrating for me and the text should at least be a little funny be. Personally, this part just frustrates me too much.

Those were three years in which you looked on like a car with full Speed towards a wall knowing it can't go well, but it can neither stop the car nor in any way prevent the driver from doing what he is doing (because he maybe suddenly and unexpectedly... you know). One is to Watch damn and then sweep away the shards, the damage kitten and then bury the dead.

The author Joe or Ugur, whoever wrote this chapter, goes off the page 102 into the details of the beginner's mistakes made in the construction of the seed spike have been, at least in excerpts, of the problems they have recorded with their very limited ignorance of protein engineering. There are A LOT more errors that were committed! I'll dedicate a whole substack to them later, if I'm through with Ugur's confession in book form.

"The study also showed that the body's immune response to a SARS Corona infection mainly targets this protein (the spike) and it is the most efficient Opportunity is to stop the threat." (p. 102)

Conveniently, the author "forgets" at this point "the study" he is referring to here refers, to indicate as a footnote. You can read about it in the in-house BioNTech info letter but somehow very different.

"While only antibodies against the spike protein can be detected in vaccinated Are there antibodies against other proteins of the SARS-CoV-2 virus in the serum of those who have recovered?

virus, for example the nucleocapsid protein (N-protein)[54]."

In plain language, in natural infection there are antibodies against various structures of the virus, also against its shell and not only against the already mutated one Spike. This implies that natural immunity is better. The conspiracy theory of the better natural immunity was now also published in the Lancet[55].

be, while in the Corona years the censor on the (un-)social Media has been blocked directly.

"Just before it docks onto the lung cells, the spike protein changes from one compact thistle-like form into a structure that is more of a tall, elongated chalice equals. Once the spike protein has docked onto the cell, it changes its shape again, and part of the spike is extended like a

Snap-knife blade, with which it pierces the cell membrane, allowing the virus to enter the cell can penetrate. The genome enters the cell and can be duplicated there.

So for the vaccine to work, it had to capture the goblet shape of the spike protein replicate The reaction forces of the immune system would be so informed, the virus attack before it became the switchblade—the form it uses to get into the invade cell. With any luck (emphasis mine) this would be the effective one Virus docking process interrupted. [...] The protein structure detached from the virus was inherently unstable. It was quite possible that the body's own cells, if the mRNA gave them the blueprint of the gene sequence for the spike protein, one slightly altered structure rather than the exact shape (p. 103)." [...] "2012 [Barney Graham] developed an approach, spike-like antigens in the shape they

from entering the cell. That gave hope, finally a safe RSV  
find vaccine. (p. 104)”

Here the author cites evidence that does not fit the text. RSV is not a coronavirus. He/  
she is even too stupid to cite correct sources. What RSV to do with the coronavirus  
conveniently, he doesn't explain that either.

This is the second place where I noticed it. As if it were that hard  
copy the correct quote directly from Pubmed under "quote", as I do.

I guess the author is talking about the so-called proline lock[56] [57](proline lock).

By the way, that didn't work. Two prolines are generally unstable and you have that  
Spike has been shown to be active and circulating freely in the blood[58]. To stabilize the  
shape

it probably needs 6 prolines[59]. If you want to know exactly, you can do this very well  
Watch a video made by Florian Schilling called "Good Spike - Bad Spike?"[60].

Florian can explain that much better in his videos than I can here as text  
can describe. These prolines (essential amino acids, by the way, which can be obtained  
via the

have to eat food) cause problems that are not mentioned here  
become. There would be e.g. E.g. proline deficiency in spike producers, by some treaters  
Smurfed was found. Furthermore, the exchange of 2

Amino acids warp the structure of a protein in unpredictable ways and  
change via so-called "long-distance influences", which means nothing else than:  
we have no idea why there was an effect, but we want it to be explicit  
don't write in the text.

Graham works for the NIH, the National Institutes for Health, Fauci's Kingdom in the  
UNITED STATES. What else can you expect from the NIH and Fauci staff?

Incompetence, or maybe knowing liars, everywhere, because they have both BioNTech  
as well as Moderna and thus ultimately (also due to

science grants) REALLY made money[61]. For Gates and company  
\$400 million may be pocket money, I could easily use it for the rest  
live well of my life. I'm not sure but it could be 400 million

Dollars maybe, maybe, on rare occasions, possibly one  
could pose a conflict of interest for the NIH regarding approval of an agent?

Since I have never been in such an embarrassment before, unfortunately I cannot do this  
for personal reasons  
judge experience.

"And he would have been with Anthony Fauci, the chief of infectious diseases at the  
NIH, agreed to join global efforts to combat the pandemic

Expertise of the American government agency to the international public

To make available. (p. 105f)”

As if a Biacore[62] measurement was that hard to see if it  
really does not bind. It's better to speculate than just go with the gold standard  
Measure protein-protein interaction?! Physically it is called a biacore measurement  
(named after the company that developed it, back in the 1990s[63]) too

surface plasmon resonance spectroscopy. A really long word, great  
Playing hangman but really hard to pronounce. Who wants to know exactly how  
Surface plasmon resonance spectroscopy[64] works, it can even do so with

Read Wikipedia, the topic is so well known, old and politically unobjectionable. The  
However, the English Wikipedia article[65] is significantly better than the German one.

To Fauci, aka Dr. Death and His Crimes became an entire book (with a great many  
footnotes) written. Who is interested in these gentlemen, and especially footnotes  
loves, should definitely read the book “The True Face of Dr. Fauci” by Robert F Kennedy  
read Jr. In short, what comes out of Fauci's inner circle cannot be trusted.

Both Graham and Gao are part of Fauci's orbit, as is Dr. Osden (alias dr Drosden) by the way. What was communicated back then, anyone can do in the Fauci emails

read[66] that about FOIA (Freedom of Information Act, corresponds to the German Freedom of Information Act) were sued out.

"Ugur didn't know if Graham was already working on Covid-19, but it was demonstrated that the genetic code of the new coronavirus sequenced in Shanghai 54 percent was identical to the MERS virus. Similar enough to any To use findings from the MERS virus spike for a Covid-19 vaccine. after he After comparing the genomes of the two viruses, Ugur found that Graham's method presumably (emphasis mine) also the spike protein of the Wuhan variant could stabilize. With this construction, the chances would increase that the BioNTech vaccines not only worked, but avoided the dreaded ADE effect. (p. 104)."

To put the "similarity" mentioned here in perspective: chimpanzee and Humans differ about 1% in their genome. Man and banana share about 50% their genome with each other[67].

Ugur again assumes that instead of simply taking a biocore measurement, he's done measure whether the protein is actually held in the non-binding formation. would it bind if there was a signal, would not bind if there was no signal. one would need both constructs for comparison and would have to produce and characterize them beforehand,

what you have saved. What characterize the product that people would then produce for the rest of their lives?

As already mentioned, it went really wrong on ALL points. Spike doesn't stable, ADE triggered, one would have preferred to measure beforehand. But you would have to do that

Know methods to characterize proteins. For that you need someone who knows about such things. Here the snake bites its own tail again[68].

As if that weren't bad enough, the Chinese now come along and give theirs Mustard in the form of Fu Gao[69], the Chinese Fauci counterpart, who has long worked with Fauci. Fu Gao is also an "interesting" personality.

"Respiratory infections, as the couple knew, were difficult to combat. The only The immune system's way of preventing infection was by scavenging the virus (with blocking antibodies) on the millimeter-short way from the mucous membrane in Nose and mouth, respectively, the surface of lung cells into the cells themselves. Is a person is exposed to a large number of coronaviruses and are the antibodies not fast enough, the pathogen penetrates through the cell wall and multiplies within cells tens of thousands, even millions, of copies of themselves (p. 108)."

Both of them studied medicine. Exactly how exactly are antibodies in the blood supposed to be at

help with this project, since they are even completely different types of antibodies acts, which are located in mucous membranes and in the blood? You probably have to been brainwashed by medical school so one of these

Break in logic is not noticeable.

But it gets even better! "The second protective force is the cellular immune response, which

takes on all those foreign bodies that have slipped through the first defense network.

This highly specialized force consists of the so-called T-cells. they destroy Somatic cells affected by the infection (p.109)."

What will happen to cells that express the spike protein from Ugur's award-winning produce health injection? A little help: "T cells destroy body cells,

affected by the infection.”

And if the reader hasn't understood that at this point, the author will turn to page 100 clearer: “If the T cells intervene at the right time, they save lives.

But they appear late in the combat zone and the virus already has many infected cells of the organs, they continue to attack the «enemy», but this attack leads to collateral damage to healthy tissue, with a potentially fatal outcome.”

Just to clarify: Ugur wants people to spike protein factories that produce spikes uncontrollably in all body cells, at least however, in the inner cells of the blood vessel system and in the lymphatic system, there can be device

Product definitely into and via the bloodstream into the heart and into the coronary vessels. He wants to use it to activate T cells, which then use this spike protein kill producing cells. And that's just to prevent a cold coming on entirely different parts of the body.

Even if the smurfing had worked as reported by the system media falsely claimed and only the muscle cells at the puncture site that produced spike protein, these muscle cells would have subsequently been killed.

Muscle cells are not reproduced, they only thicken during training. So you would have at best, a hole in the upper arm where the muscle cells would have died.

To what extent that would have impeded arm function, I cannot say. At least that would be would have been a smaller price to pay than what was on the victims this campaign of lies has now come and will come.

“Early studies on recovered SARS patients had shown that healing only occurs through activation of these T-cell forces (emphasis mine) was possible. (p.109)”

Does the gentle reader still remember the obsession with antibody titers? Everyone who argued with T-cell immunity, this could also prove, was ironed out and was a lawless unvaccinated.

T-cell immunity was not recognized as evidence of immunity, only vaccine antibodies!0 That was arbitrary or, to put it in Karlchen's words, “nonsense”.

“In the highly politicized world of medical research, where academics defend pet theories and often harbor a lifelong grudge against those who denigrating them, the couple had remained strictly agnostic and left them alone solid data. (p. 111)”

After the chapters analyzed so far, what else can I say about this assertion? except: NO!

Don't be guided by data. And you don't need to argue if you censors and silences all dissenters through government contacts. But we have already covered all this in the previous chapters, I repeat myself very reluctant.

“As soon as we are able, with a vaccine that protects people and is safe is to help contain the emergency situation, we can still do one if necessary better second generation,” he explained to those present. Now it was priority is to clarify the unknowns - the question of whether there is even a working one vaccine could give and whether it caused any harm (p. 113).

“The sentence “- the question of whether there could even be a functioning vaccine and whether did this damage” it REALLY says in there! The sentence is NOT mine invented.

The real satire really writes itself here without my intervention.

The Bivalent Booster, the second generation, was a complete non-starter[70] and extremely contaminated with bacterial plasmids[71].

Footnote 71 is one of the scientific gems on Substack that I mentioned in a previous

Episode mentioned when I explained that Science is up to date via Twitter and Substack runs. Announced on Twitter, published on Substack. All past the censor, anonymously and immediately available after data generation. It really is more transparent at the moment not.

Anyway, Ugur is doing something similar to vacation with his family Lanzarote.

As a child, I liked to play the game "I'm packing my suitcase", which was published in the Lower school likes to play in substitution hours. What does Ugur pack when he flies on vacation? "As usual, he would insist on paying the extra for a Paying for an extra piece of luggage for a suitcase full of electronics, including a Laptop and two large monitors, without which he couldn't organize his thoughts. The The family also never traveled without their own coffee machine and grinder. So was ensured that the fuel the two doctors for the morning drive needed, was of consistent quality. (p. 92)"

Whoever is innocent cast the first stone. Who am I to judge my neighbor when I always take my cuddly pillow with me when I travel, since I was a child. Is of course no longer the original cuddle of my childhood, but at least cuddle No. 6, but it doesn't work without a travel snuggle. I don't need an extra suitcase for that, But cuddly takes up a lot of space, even if you put it in a vacuum bag packs. But it's definitely lighter than 2 big monitors, one Coffee maker and a coffee grinder. Doesn't Ugur's coffee machine grind automatically? My coffee machine also grinds, but it is definitely too big for a suitcase.

During his "vacation" Ugur zooms with China, especially with Fosun (p.114). Fosun is one of the companies in which Hunter Biden's Metabiota[72] also invested[73]. metabiota and Hunter's investment firm Rosemond Seneca[74] stole money from the DOD (US department of defense) for Ralph Baric's EcoHealthAlliance washed. EcoHealthAlliance in turn had contacts with the Virological Institute in Wuhan[75] and to IQTEL[76]. Anyone who wants to know more can do so with Thomas Röper[77]

Read about it in "Inside Corona[78]". Or in the US attorney's indictment Renz[79].

It is also interesting that China itself vehemently refuses mRNA slugs use[80] and called them poison. And that although China in the later following Studies of these substances was involved[81] and also manufactured these smurf substances

has[82], but of course only for foreign countries. Nevertheless, "the interest in Fosun" came directly

from the top of the company". (S 115)" And because it's such a super dangerous one Pandemic rampant which will kill millions of people, Ugur travels two weeks later (probably by plane) to Boston to Aimin Hui, his contact at Fosun, to meet in person (p. 115).

What can I say to sum up this chapter? It wrote quickly since I practically only had to shorten it and could let the text stand on its own. the authors have sometimes described it aptly more satirically than I was able to do it myself were.

The chapter is called imponderables. Unpredictable for whom? Somehow could various, muzzled scientists all these alleged imponderables correctly predict. Even the authors of this chapter are already saying the catastrophe in their own right

words exactly ahead. Funnily enough, the author of this book chapter (which one of the three on whatever book cover it may have been, maybe all three together),

exactly the studies that warn modRNA believers from us unvaccinated were held against.

Perhaps the authors simply did not know the quote attributed to Einstein: "The Insanity is defined as doing the same thing over and over again and getting different results

expect." And after the examples of failure given by the author himself, from the blinded by one's own hubris, believing that one does not place oneself in the ranks of Einstein's definition of insanity seems to me to include failure to match quite well. In fairness, however, one must concede that they failed of the gene experiment as a possible but unrealistic possibility. The But taking risks with other people's lives was worth it for Ugur to go. He himself let himself (contrary to what is claimed later in this book towards the end),

don't vaccinate first! At least that's what he said in the ARD Extra Magazine on September 6th, 2021: He wouldn't

For safety reasons, do not vaccinate himself and his employees for the time being, because he

could not afford to default if they wanted to honor the supply contracts.

The interview was then quickly deleted from the internet (there is no censorship instead), but I saved it. However, there is a Deutsche Welle interview on English, which can still be found on Telegram[83], which the ARD Extra Interview yet once confirmed.

In the book, towards the end, this is presented in a gaaaaaaaanz different way. ... and

his employees also allegedly got home-brewed, non-commercial batches (just like the Pfizer employees in Australia). But that's a massive spoiler for later ones Chapter.

If you don't feel like annoying substack emails, you can simply use my Telegram channel subscribe, where I put the links to the articles: [https://t.me/DrBines\\_verbales\\_Vitriol](https://t.me/DrBines_verbales_Vitriol) Otherwise:

Job offers please only from the Freiburg im Breisgau area, I am geographically bound.

If a publisher has the courage to publish these texts in book form as a reading aid, I'm open to serious offers. Somehow you have to put the knowledge among the sheep bring and unfortunately read no substacks.

Thanks to Doctora for proofreading. Unfortunately, I then tend to do more to make additions, and then they have typos again.

If you find typos, you can keep them, there is no finder's reward.

### Part 5 (quote):

"If you don't want to appear as a loser, go head-to-head with the biggest loser you can find (Sun Tzu the kangaroo<sup>[1]</sup>)

### Chapter 5 test phase

What is tested here is above all my patience and my sense of black humor I would say. Maybe my mathematical knowledge of the number range from 1 to 20 (1st grade) will also be tested a little. In addition, perhaps a little refresher on simple decimal numbers and percentage calculations. As for the rest of the stuff that's supposedly being tested here, I'm not at all sure what it's actually supposed to be testing. Perhaps one would have with the protagonists of this absurd theater<sup>[2]</sup> Better get a drug test done.

*"As of January 2020, BioNTech was still primarily a cancer immunotherapy-focused company."*(p. 151) [...] "Since numerous influenza vaccines already existed, it was also easy to assess how well drugs based on the technologies in BioNTech's ever-expanding mRNA toolkit really worked by comparing them to conventional vaccines . In 2011, the company secured grants from the German government for this pilot program, which Ugur and Özlem deliberately kept a secret." (p. 152)

So you got money from the federal government for mRNA vaccines against influenza as early as 2011?

I wanted to take a closer look at that, which is currently annoying because you're getting more and more information about the broth from the last few years and you have to dig a little deeper if you want older information about this biotech crap. There were probably a total of three grants from the BMBF (Federal Ministry of Education and Research)<sup>[3]</sup>:

Two grants as part of the biotechnology start-up campaign (GO-Bio) between 2007 and 2013 (totalling 4.1 million euros)[\[4\]](#) in the founding phase of BioNTech.

Beneficiary: University Medicine at Johannes Gutenberg University Mainz

Funding: GO-Bio Phase I (03/01/2007 to 02/28/2010, 1,242,119 euros)

Beneficiary: BioNTech RNA Pharmaceuticals GmbH

Funding: GO-Bio Phase II (03/01/2010 to 12/31/2013, 2,892,862 euros)

Another funding by the cluster "Ci3- Cluster for individualized immune intervention" from 2012 to 2017.[\[5\]](#)

The company also benefited from further project funding from the BMBF from the special program launched in June 2020 to accelerate research and development of vaccines against SARS-CoV-2[\[6\]](#).

I couldn't find anything about influenza, except for this phrase "vaccines for immunotherapy of cancer". That doesn't sound like influenza. The 2011 funding can actually only have been Go-Bio Phase II.

As was already written in the foreword, some of the dates could not be remembered so precisely. It may also be part of it that you think you remember that there was money for an mRNA vaccine for or against influenza at the time. Without looking at the funding agreements, I can't really say anything specific here.

However. So you want to compare it to flu vaccines, which Cochrane says actually didn't work very well and still doesn't work[\[7\]](#). Even the BMBF admitted this in 2015 for old people[\[8th\]](#).

That can be fun. Especially since Fauci himself has now admitted that influenza vaccines are for the bin. OK, he puts it more scientifically politely as "less than suboptimal".

If we translate sub-optimal as "not particularly good" then less than sub-optimal is: scrap or straight to the bin!

Flu vaccines would never have been approved by today's standards[\[9\]](#), which means a lot, after even the modRNA lethal injection received at least conditional approval. Flu vaccines are soooooooooo useless, even at the extremely low standards that are currently used as

a benchmark for approval, e.g. For example, that animal testing is no longer needed in the USA<sup>[10]</sup>. Incidentally, Fauci and his co-authors also write that both the influenza vaccines and the modRNA plague would produce incomplete and very short-lived protection.

**So much for two syringes and protected forever**, as it was called at the beginning of the plandemic or Janssens/Johnson&Johnsons Markening relied on just a single syringe and that was it.

The hit in Fauci's paper, however, is this sentence, for which one would have been blocked on all platforms as a vaccine refuser during the Corona period and, as a doctor, would have received a visit from the local police: "Natural mucosal infections with respiratory viruses do not produce a complete and long-term protective immunity against reinfection, how can we then expect vaccines, especially systemically administered non-replicating vaccines, to do this?" administered non-replicating vaccines, to do so?")

Welcome to the family of conspiracy theorist Dr. Death. Sucharid Bhakdi said that from the start, which is why he has been persecuted and defamed for years.

What prompted Fauci to make that statement above? A loaded pistol on his temple? A deal with the White Hats that he'd be guillotined and not shot?

Fauci and the pharmaceutical industry have certainly known for decades not to squirt placebos. The substances have no benefit but can cause harm, and they've shut up and reaped the profit for 60 years, even with vaccines that do no harm. Even then, the system media simply shut up and business went on<sup>[11]</sup>.

Incidentally, in the old days, in the Wild West, this was called "snake oil"<sup>[12][13]</sup>sell. The principle of selling completely useless cures to some gullible sheep at inflated prices is old and tried. Already Dickens wrote about it in the Pickwick Papers. Medical student Benjamin "Ben" Allen<sup>[14]</sup>but went bankrupt (as far as I remember) from being constantly drunk and poisoning his customers through ignorance if they were not smart enough to change pharmacists. This also seems somehow familiar to me at the moment, where is it from?

With a bit of common sense and a solid literary education with regard to the classical literature mentioned, one could actually have guessed that. People have been happily vaccinating against seasonal flu for 60 years. These products are freshly assembled every year, seasonally with a 6-month offset from 8 components, and the flu is still far from extinct, but continues to mutate in a relaxed manner. Unless it is renamed Corona at short

notice, as will happen in 2021, when it was "extinct"[\[15\]](#). We should probably continue to use a completely useless remedy against a completely different disease in the future so that we can get the influenza under control, which worked so well in 2021.

*"Two years later, they hired their first infectious disease specialist. At first, Stephanie Erbar did not have the impression that she was working on a particularly important BioNTech project. About her colleagues who developed cancer therapies, she says: "They were afraid of getting infected. I was only allowed to work in the lab in the afternoons or evenings when nobody else was there." Their first place of work was in a room called "Dead Pigeon" because there was a rotting bird lying on the skylight (p. 152)"*

If you look at LinkedIn, Stephanie Erbar started at BioNTech in 2013 as Project Manager - Senior Scientist. She became Head of Infectious disease vaccines in September 2016 and has been Head of Infectious disease vaccines since October 2020. She studied (2001-2006) and did her doctorate (2006-2010) in Marburg, followed by a postdoc in Marburg (2010-2013). Since her name is thankfully not very common, her scientific work can be followed well on Pubmed[\[16\]](#). She probably did her doctorate on the Nipah virus and did research in Andrea Maisner's laboratory[\[17\]](#), which unfortunately does not have an alumni section on its website.

Stephanie is at least one of the co-authors of one of the Drosden Papers[\[18\]](#). In 2018, already at BioNTech, she published a paper entitled "Self-replicating RNA vaccines offer equivalent protection against influenza as mRNA vaccines, but at much lower doses[\[19\]](#)." After we learned that influenza vaccines are less than useless... Connect the dots!

A virologist once told me that as a PhD student in virology, you are welcomed as a member of the family. The virologists would all be like a small family. Sort of like the mafia, I guess. La Famiglia[\[20\]](#) sticks together and whoever betrays them has to pay a high personal price, like this doctor specializing in virology. Anyone who opposes the family gets in trouble. Stephanie Erbar is part of the family. You know each other. she knows Dr. Osden, he knows Fauci (you know that from the Fauci emails, Drosden was partly one of the direct recipients). Stephanie Erbar works for BioNTech. Incidentally, the Nipha virus also leads back to the Wuhan Institute of Virology via Fauci[\[21\]](#). Of course it could be coincidence. Many groups are researching on this virus. BioNTech gets the proline lock info from Fauci's institute. I already worked through the Proline lock in an earlier substack. A small, cuddly family of virologists.

Annette Vogel[\[22\]](#) will be added in 2014 (p. 153). She also has an easily accessible LinkedIn profile[\[23\]](#). Biology studies in Göttingen from 2002-2004, then 2004-2008

master's degree in Tübingen and traineeship at Spektrum Verlag (2006-2007), around 6 years at the Friedrich-Loeffler-Institut[24] to do a doctorate on the island of Riems and do postdoc rounds. Annette Vogel is the first author of the paper claiming that the BioNTech lethal injection kills macaques[25] (these are monkeys) would protect against the Chinese flu[26].

Oddly enough, I haven't read about these monkey experiments in the book I'm fileting here. They probably didn't want to upset the minds of the readers with primate experiments, I guess. The target group of this book let itself be smurfed out of solidarity and because every life counts, also and above all that of animals, which is why many zoo animals were "happy" with the BioNTech broth.[27], so that now the animal experiments in various species are made up for at the expense of the zoos, one could say.

Maybe it's also because they killed the monkeys for nothing, because they were probably unsuitable as model animals for Covid-19 ("We conclude that the 2-4-year-old male-macaque challenge model is primarily a model of SARS-CoV-2 infection rather a model than [sic] of COVID-19 disease [sic].").

However, this confuses me. How can BNT162b protect monkeys from a disease they can't get?!

Which confuses me even more. How could such unbelievably bad English, including typos, become a Nature paper?! It should read "rather than a model of COVID-10 disease". A spelling mistake and a syntax mistake in half a sentence in a Nature Paper speaks for me as someone who wanted to be an English teacher against a peer review of any kind. THAT should have been noticed, even if you don't understand the subject matter.

In 2015, another scientist joined the BioNTech team, but he was not named (p. 153).

This is followed by the previously mentioned (unsuccessful) HIV projects (led by Imperial College London), "collaborative projects with Bayer's veterinary division on livestock vaccines and with the University of Pennsylvania on a variety of pathogens. This was followed by a cooperation with the Bill and Melinda Gates Foundation and in 2018 a major project with Pfizer on the flu." (p. 153)

Imperial College, wasn't there something with Neil Ferguson? But I had already dealt with that in Part 3, Chapter 2[28].

At this point, the author of the chapter quotes the BioNTech company website and not a single scientific paper or clinical study!

From this I conclude that it was a sentence with an X, so that was probably NIX or to put it more politely "But while companies that also work with mRNA, such as Moderna and CureVac, started clinical trials with vaccines against infectious diseases, similar programs from BioNTech remained, where still prioritized cancer projects, in the exploratory phase."

There is a table of what a scientist says and what a scientist means by it. This list was on the joke board in every lab back then, although it was NOT A JOKE [\[29\]](#). Exploration phase, of course.

Because Moderna has admitted that their modRNA vaccine against influenza performed even worse than the classics [\[30\]](#)[\[31\]](#)[\[32\]](#), which are already "not very good" according to Fauci and Cochrane, I probably don't need to say much more about that.

*"When Ugur started "Project Lightspeed", the unit, which was explicitly concerned with infectious diseases and was now headed by Annette Vogel, consisted of just fifteen people."*(p.154)

On p. 155 one finally begins to distinguish between the different forms of RNA, something the book has so far failed to do (perhaps in the hope that most readers have already given up digging through the book, or the book for the same Destiny suffers like Mein Kampf, the most unread book in history, right after Klaus Schwab's Great Reset I bought my copy used and unread because I didn't want to throw money down the authors' throats, ie Project Lightspeed ", not "The Great Reset". I actually read "The Great Reset" and the book could be filleted in a normal review with a little overlength).

However, since in the previous chapter (Chapter 4), Karikós and Weissmann's invention of modRNA was treated historically (albeit skipping any supporting evidence in the form of footers) comes bio-mRNA, as I call it, the normal mRNA chemical molecule , and the modRNA (the pseudoridyl variant by Karikó and Weissman, which was ultimately used and gave the company Moderna its name) a few other RNAs that were also to be tested in parallel.

Funnily enough, BioNTech has to license the technique developed by their colleague Karikó because the rights belong to the university that filed the patent. If you want to know why this is so, you should read my substack on patents at universities [\[33\]](#)read.

This patent is one of the pink unicorns that feeds the unemployed sci-fi authors of the rest of the university patents.

As if the current cabinet of horrors with the variations of modRNA in use and the damage that modRNA is already doing wasn't bad enough, BioNTech also offers in its portfolio "Self-amplifying mRNA, or saRNA, and transamplifying mRNA, taRNA, ' (p. 156).

If you thought modRNA was bad, give thanks on your knees, whoever it may be, that saRNA wasn't used[\[34\]](#). If you want to know more about that, you can read the quoted article by Jessica Rose. It's too specialized here and I don't want to send anyone straight into a coma with these details. To put it bluntly: the SA during Hitler's time could not have spread more fear and terror among resistance fighters than the concept of saRNA among scientists with common sense and conscience.

*"Their reluctance [...] was also because there was no knowledge of how these technologies would work in combination with each new lipid. Years earlier, while optimizing their cancer vaccines, Uğur and Özlem had discovered that these encapsulants lead to a "multiplication of the effect of the mRNA". Not only could the composition of these fat globules be tailored to allow for intravenous or intramuscular delivery of the mRNA, but it could also regulate the exact destination of the molecule, allowing vaccine developers to choose the organs and cell types to which they wanted to deliver their cargo . How the lipid chosen for "Project Lightspeed" would perform in combination with the company's individual mRNA platforms remained an open question."*(p. 157)

How was that again in chapter 2[\[35\]](#) with the cationic nanolipids that the PEI wanted to accuse as safe and already approved? As a reminder: "Ugur and Özlem's team had to find a way to present the Paul Ehrlich Institute with an already existing lipid formulation that had already been approved by the drug authorities." (p.77)

So we have here not only a problem with the cationic nanolipids themselves, but also with the combination of the content, the effect of which could be multiplied and this combined with different mRNA variants, which all behave differently in the body.

What can go wrong if you start a blind flight? This will certainly work without any errors on the first try, definitely, word of honour!

You could see in the Pfizer documents how well the addressing of the destination worked[\[36\]](#), the cationic nanolipids spread everywhere and that's not really surprising. When you inject a drug into the muscle, you want one thing above all: that this substance

be distributed quickly and evenly in the body, which is why you inject it into the muscle. You learn that in medical school. Ugur and Özlem are both doctors, even internists, oncologists and immunologists. How can they even begin to think that a substance injected into a muscle will stay in place or go to a specific location in the body?

Biology is always about gradients. Even if a large part of a certain substance is preferentially found in a certain area of the organism, it can be found in lower concentrations in other areas. Gradients, concentrations, ratios of concentrations to one another have a regulatory function and are only partially understood, which is why there was a Nobel Prize 25 years ago [\[37\]](#) for this. And that was just for gradients in embryos of *Drosophila melanogaster*, the pesky fruit fly. Humans have not yet reached the beginning of understanding.

**The cationic nanolipids are industrial fats. Fat and fat like to mingle. Where do you think a fat molecule will go? In fatty organs maybe? "It could also regulate the exact destination of the molecule, allowing vaccine developers to select the organs and cell types" I think is a misconception born of ignorance or overconfidence, thinking you can win against biology and its laws. Anyone who believes this will fail!**

**Nobody can win against biology and its biological laws or Mother Nature and the laws of nature ALWAYS! This should be clear to anyone who has even a rudimentary understanding of their biology degree, and this also applies to medicine as a specialized subsection of biology in the university pecking order.**

Who hasn't heard of the university pecking order in the natural sciences. Here she is:

Physics is applied mathematics.

Chemistry is applied physics.

Biology is applied chemistry.

Medicine is applied biology.

As a biologist, one was glad not to be at the bottom of the pecking order and still had a discipline to look down on. While being bullied by the other faculties as a humanities discipline under the sciences, while medicine was seen as the craftsman under the sciences. It may not be a coincidence, after all, that the discipline at the very bottom of the intellectual-scientific pecking order triggered this disaster, admittedly with a little help from the second-place discipline from behind.

***"The task of these new lipids was the same as that of the cancer vaccines: to transport the mRNA to the dendritic cells,"(p. 158)***

**That sounded somehow different on RTL: "The active ingredient can stay in the muscle for a few hours and the body has time to recognize it and react to it, explains the Rostock virologist Andreas Podbielski [\[38\]](#).[\[39\]](#)"**

What now? Muscle or dendritic cells located in the lymph nodes and primarily in surface tissues of the body such as the skin, throat, esophagus, vagina, cervix and anus and in the internal mucous membranes. THAT doesn't really sound to me as if you could optimize it specifically for an organ. The dendritic cells are well and strategically distributed almost everywhere in the body.

That's called an oxymoron in literary terms, by the way. The oxymoron is a rhetorical figure using two contradictory or mutually exclusive terms, such as black horse or straight curve. What is being planned here is a biological medical oxymoron, but no one seems to notice.

I just want to make sure I'm not getting this all right: You want to "transport the mRNA (again, you don't differentiate between RNA types) to the dendritic cells" so that the vaccine developers could select the organs and cell types. "Which of the organs in which the dendritic cells are supposed to be? There are so many! As a doctor, you have certainly learned in which organs you can find dendritic cells and if not: It's even in Wikipedia[\[40\]](#)! Wikipedia is of course not a scientific source, but you can look at the footnotes.

*"There was only one intramuscular lipid that could go into production for clinical trials at any time: a formulation from Acuitas that BioNTech initially planned to test in the partnered project with Pfizer to develop a flu vaccine. It was this lipid formulation that the couple and their team presented to the German regulator at their first meeting in February."(p. 158)*

**I detailed the problem with the Acuitas Nanolipids that nearly ruined Moderna in my analysis of Chapter 2. That's just a blatant lie at this point! Now on page 158 the confirmation in black and white: BioNTech has sold the Acuitas nanolipids to the PEI, which Moderna listed as safe in its investor report as a safety hazard!**

I had guessed correctly in part 3 of this series.

Conveniently, one omits the name of the lipid (ALC-0315) at this point, as well as supporting this claim that they had been developing for years would make more or less effective. (p. 158)"

Whenever things get exciting, the endnotes are missing in "Project Lightspeed". To date, I have not seen a single safety data sheet for this substance where the LD50 was determined for injection. LD50 is the index that indicates the amount of a substance at which half of the test animals died. This identifier was not determined for ALC-0315. So how do you know if this substance is safe? If someone should have these data and animal experiments, please leave them in the comment function. This data would be of great interest to me and many other scientists.

*"Moderna and CureVac, who both started coronavirus vaccine projects, had a lot of clinical data on the combination of mRNA formats and lipid formulations they planned to use. BioNTech does not. (p. 158)"*

Cleverly worded. Moderna and CureVac have a lot of clinical data. I can't say what CureVac's data says, but what Moderna had in terms of data wasn't exactly clear from the Chapter 2 analysis. The nanolipids are an old problem, Moderna was definitely aware of that[\[41\]](#), **because they actually had a lot of clinical data, from FAILED trials. It sounds somehow different here on page 158 when Joe or Ugur put it that way.**

*"They would test twenty different candidates for a Covid-19 vaccine, in different dosages and in parallel. These were vaccine candidates that submitted modRNA, uRNA, and saRNA embedded in the lipids of Acuitas to test the full spike protein and its RBD portion alone as vaccine antigens. [...] . In order not to lose any time, vaccine batches were produced from day one to the high standards required for clinical testing.(p.159)"*

**The data from the preclinical trials of the 20 smurf candidates is sparse. Unfortunately I haven't seen any data on this. Maybe they just got lost in the flood of data, even I can't keep an eye on everything.**

**How did these 20 constructs fare in direct comparison? What became of the saRNA candidate? Have all of these 20 constructs been tested (Chapter 7, I'll get to that) in Sentinels (i.e. with the first human guinea pigs) and if so, are these people still alive? How are these people? If anyone has data on the Sentinels, please put it in the comments below. I would be interested in that as well.**

*"It was a prerequisite for all vaccine manufacturers that the genetic code of the coronavirus – sequenced thanks to the presence of mind of Zhang Yongzhen, a professor at the Shanghai Public Health Clinical Center – was uploaded to the open-source website Virological.org on January 11, 2020. [...] The first step in producing the actual vaccine material was to make copies of DNA for the candidates, which would then serve as a*

*template for the production of RNA. Molecular biologist Stephanie Hein, in charge of BioNTech's "RNA Depot," an actual repository of antigens or targets for the company's vaccines and therapies, worked quickly to design and create the genetic sequences for these templates. They contained up to 4000 nucleotides and had to be assembled from fifty to eighty smaller building blocks to form a perfect, error-free code consisting of the nucleotides G, A, T, C. After completion, the sequences had to be cloned and checked for correctness. [...]"*(p. 160)

**For all critics who have been warning for the last 3 years that there is no isolate, here is your absolution and that from the origin itself.**

Ego te absolvo! (Mark 2:1-12)

**THERE NEVER WAS A VIRUS ISOLATE!**

**All smurf fabric manufacturers refer to a possibly synthetically compounded, unnatural, possibly even entirely computer-invented, toxic protein that may have been placed in this database as a sequence on purpose by whoever.**

**Was this sequence really sequenced from a patient or simply entered into the database by a bioweapons laboratory (US or China, for example) so that some gold diggers with no idea about protein design and protein characterization, maybe even unknowingly, use it to create the bioweapon and lethal injection?**

**Is this ignorance presented in this book so explicitly that one can plead mitigating circumstances in later trials?**

**At least in Argentina, the Smurf Project was a military subordinate project[\[42\]](#)[\[43\]](#), as evidenced by the documents sued out by attorney Augusto Roux (subject #12312982 in Pfizer study C4591001), who suffered vaccine damage in the study and was reclassified as a Covid case[\[44\]](#)[\[45\]](#).**

Apparently Pfizer messed with the wrong guy. A little hint for the next studies that you want to falsify: lawyers should not be used to falsify data, they know their stuff, go to the extreme and sue! With young children like Maddie De Garay[\[46\]](#) one is more on the safe side if one falsifies data, unless the parents turn out to be able to defend themselves. The Maddie De Garay case has been known for a long time from the warning voices (since August 2021). The world[\[47\]](#) took over a year to tackle and report the story and has claimed the lives of thousands of people through her dawddling or cowardice. But now

she's going to wake up with this old, almost deaf story, possibly after a little tour of old Substacks from last year[\[48\]](#).

**I see no reason to rejoice that the first MSM media is now reporting when it is already too late and even Fauci is now trying to wriggle out.**

**The old media, financed by compulsory levies, such as ARD, ZDF and the rest of the corrupt morass, which readers are running away from, just want to save their collars and leave the sinking ship like rats.**

**So they start posting old stories from Substacks from a year ago, trying to polish their image with the sheep. This speaks again to the quality of Substack's independent releases as opposed to the slow, desperate legacy media.**

*"The laboratory process for this approach, known as gene synthesis, was established at BioNTech years ago and has now become routine. [...] "There were now only two of us in the team instead of three, and one worked part-time," says Hein. She had no choice but to put on her lab coat for the first time in two years and pick up the pipette herself."(p. 160)*

I don't want to doubt Steffi's abilities now, even though I think I know her personally from my time at the University of Freiburg. There was a Stefanie Hein; she did her doctorate with Professor Wolfgang Hess, for whom I worked as a project administrator for third-party funds of a BMBF project called FRISYS. I don't remember Stefanie very well, she found her rather inconspicuous: bond, with curly hair and thick-rimmed glasses, a little stockier build, below average height, definitely smaller than me. One day she stood amazed in my office and looked at my greenhouses in which I grew my tomatoes, passion fruit and cactus plants for the garden (so it must have been February/March) and asked amazed where I got the seeds from. I thought I scraped them out of the fruit which I brought for lunch. She was amazed that you can just scrape seeds out of fruit and they will become plants again. At the time, Steffi was already doing her doctorate at the Faculty of Biology 2 at the University of Freiburg. Stefanie Hein has no reasearchgate profile, no Xing or LinkedIn profile. BUT there is still Pubmed[\[49\]](#). And who do we find there on a BioNTech paper, in which the broth is supposed to protect monkeys from a disease that they cannot get and at the same time on the AG Hess papers... my Steffi, whom I only remember because of the conversation about flower seeds and their knowledge gap at the elementary school level. That's similar to the 360° Baebock quote I guess in terms of the size of the education gap.

This Steffi Hein is named as the "scientist responsible for BioNTech's "RNA depot"" (p. 160). Kind of stupid for them that I knew them personally (and two other current BioNTech employees).

**So Stefanie personally grabbed the pipette and made the prototypes of the bioweapon after she hadn't worked in the laboratory for 2 years. Brave.**After 2 years, I would carefully register as an intern with the TA (technical staff) in a laboratory and get instructed again before I mess up, now, after 15 years, even more so.

In my time there was a professor (now emeritus) whose name I will not mention. He was a microbiologist and now and then had the feeling that he would like to do some practical work on the bench again. If he expressed this urge to a co-worker or his secretary, the lab would panic. Everything that was irreplaceable was hidden. Hid everything that was important. Was quick to label everything properly because he tended to just teach unlabeled chemicals down the drain as a lesson. Things have ended up in the sewage that should have been disposed of separately, just when you're wondering what the safety measures at the university are like.

The stage was set for him. An illusion of a laboratory that actually didn't exist in reality. A Matrix version of the lab. Or as Shakespeare would say "All the world is a stage"[\[50\]](#).

He accidentally ventilated the anaerobic tent (a special chamber where you work with bacteria that don't tolerate oxygen) and still shut down the lab for several days, despite doing everything you could to prevent such failures.

So Steffi grabs the pipette herself. After 2 years of abstinence.

*"No matter how hard Hein and her team tried, they couldn't combine all the nucleotides in the right order and fuse the segments correctly in the right order. They tried all sorts of solutions, but every time they analyzed cloned templates, something was wrong in the sequence."*(p. 160)

Now why am I not surprised?

**And if the problem occurs routinely on a small scale, how likely is it that these problems will possibly, perhaps, fatally occur every now and then in mass production and then be overlooked?**

Since the final product was unfortunately never officially sequenced by the authorities, we will probably never know. The authorities have not even determined the concentration[51].

But what has actually been sequenced, by independent scientists, and then published on Substack definitely has a problem. Namely, double-stranded plasmid DNA was found[52]. If someone is reading along who is familiar with eukaryotic genetics (i.e. genetics of living beings with a cell nucleus), ideally human genetics, and would like to take a closer look at it with me: Please get in touch with me. I'm unfortunately from prokaryotes (bacteria) genetics. I'm not sure if you can transfect a human with a bacterial plasmid. The intestinal bacteria can certainly be transfected with this construct, as can the rest of our microbiome, which could then also start producing spike protein. I certainly don't need to start at this point with the consequences of the transfer of the plasmid from bacterium to bacterium in a sewage treatment plant or wherever in the wild. That leads to a rat's tail of problems, it gives you gray hair.[53]. Very ugly!

*"The first vaccine candidate was available as a DNA template at the end of February."*(p. 162)

**When the first smurf substance candidate was ready at the end of February 2020, the test animals were then injected with it in January 2020[54]?**

I'm only asking because I'm a little confused. BioNTech's FDA filed document R-20-0072 125742\_S1\_M4\_4223\_R-20-0072 states on page 8 that the animal studies from 14.-23. January 2020 took place. If BioNTech does not also have a flux capacitor[55]owns, **we have a timing problem here that either makes this book a fictional novel that I can dissect as I please, or degrades the data submitted to the FDA to a product of fantasy.** Possibly even both apply. Or perhaps the leading scientists were simply suffering from dementia and lost track of the day, month and year and are now already in a nursing home where the problem is being taken care of professionally.

Unfortunately, the document submitted, in the currently accessible form, is severely mutilated due to blackening, although toner-saving procedures have been used here and light gray has been used. But one thing is clear: the mice were killed early and there is therefore no data on how long the animals would have lived after the injection. That would have been interesting too. Does the product shorten the lifespan of rodents?

You probably just didn't want to know that exactly. Quite apart from the fact that the least sensitive test (luciferase) was used so that nothing could be found that could interfere, which Robert Malone has already commented on at length[\[56\]](#)[\[57\]](#).

*"Trials with rodents, carried out in a separate location, followed. Groups of eight mice each were given the vaccine candidates at three different doses: low, medium and high."*(p. 163)

Aside from the fact that low, medium, and high are completely useless quantities and suggest more of a spatial orientation, where is the data? According to Buch, the 20 constructs mentioned were tested on 8 mice in three different doses each. That makes  $20 \times 8 \times 3 = 480$  mice. I repeat: where is the data?

Certainly not in document R-20-0072 125742\_S1\_M4\_4223\_R-20-0072.

*"After the rodents were all vaccinated and checked for signs of side effects, they were bled at intervals for six weeks to do hundreds of tests to see if the vaccine worked or not."*(p. 163)

**Now I'm not a math genius like Ugur, but 14.-23. January 2020, that makes 9 days.**Or maybe I just have the wrong document. If anyone has the document to which the book text refers, please write in the comments.

According to Buch the mice are injected with the smurf substance on March 9th (p.170).

So you can't just be wrong about the month, not a single number is correct here!

*"To find out whether the antibodies did this job, Vogel's team had to develop a 'gold standard', the virus neutralization test (VNT)."*(p.164)

**So you pull a detection method out of your fingers that nobody has checked and claims that it is now the gold standard.**I'll just let the reader judge for themselves how trustworthy these results are.

With this gold standard, BioNTech proceeds as follows:

*"BioNTech's teams cultured the virus and added it to healthy cells, along with a serum containing potentially neutralizing antibodies. After five days, it was checked whether the cells had been destroyed – or whether the infection had been prevented."*(p. 164)

**Unpurified serum that also contains complement proteins and lysozyme (i.e. the NONSPECIFIC components of the innate immune system)[58], you flip to cell culture and you decide that it was the antibodies of whatever nature that neutralized the virus and not the components of the innate immune system?**

It also ignores the variability of the immune system between individual mice. Once again work with professionals, I say here again. Did these "scientists" actually even hear the introductory lecture on the immune system?

Ugur is supposedly an immunologist, he should know that his "gold standard" is simply useless for what he claims to want to prove or just doesn't want to prove.

Alex Music[59]page 167 comes up with another "terrific" idea.

*"Instead of using samples that contained live coronaviruses, Muik said the company could fall back on its old acquaintance, the vesicular stomatitis virus. [...] In this way, a pseudovirus was created that contained the part of the coronavirus that BioNTech hoped to target with its vaccines, but was unable to cause Covid-19. Muik's construct was just a harmless impersonator."*

**So you didn't even test against an artificially produced nature-identical corona virus, but against a COMPLETELY DIFFERENT VIRUS[60], which infects ungulates, which could possibly behave differently than the virus one is trying to combat. So you worked with a so-called pseudovirus, which you implanted an artificial spike sequence from a Chinese database, without EVER having isolated the real virus anywhere, nowhere on this planet.** Not until today (03/2023). Why not phage display? You can buy that at least standardized as a kit. Whether I take a virus that causes colds in ungulates and cannot infect humans or bacterial viruses (phages) directly, ultimately makes no difference in MONKEY cell culture.

Here we are at a point that I have already explained in detail in my article on protein engineering[61]. You attach the spike protein to another virus, replacing its "feet" or "spikes". This can bend these proteins because they are now attached to a different shell, which is just different. Maybe different surface curvature, maybe different protein production rates, making folding slower, faster, or just different. Phage display, or in this case ungulate virus display, can work, but it doesn't have to. You should first prove that it works with this protein. Has this been proven with positive and negative controls?

**Another problem is that the spike protein may not only use ACE2 to enter the cell, but so-called co-receptors.** It is currently believed that the spike protein may use co-receptors to enter the cell [\[62\]](#), but did not identify her. So even if the monkey cell lines used had been humanized (which has not been done), these previously unknown receptors would certainly not have been humanized. Humanized means that a human ACE2 receptor has been installed instead of a monkey ACE2. Unknown co-receptors, however, cannot be humanized because they are not known, hence UNKNOWN. You should have checked that beforehand. Does the Spike Protein use co-receptors? Yes or no? Has that been checked?

It also doesn't make you suspicious that a Chinese company "Sino Biological, which also had a location just west of Frankfurt, offered its customers a DNA template that encoded the entire sequence of the coronavirus spike protein." (p. 169)

Mind you, only a THEN template, not a virus isolate. They're all playing with the fantasy product from the database, the origin of which can be traced back to a bioweapons laboratory (in the Ukraine (also in a town called Chyna [\[63\]](#)), **the USA or China**).

*"However, in the total number of cells in each dish, even in the absence of antibodies, only a small number of cells are infected: 500 out of 40,000. Looking through the microscope, the resolution did not allow us to see the difference between 500 and 50 infected cells, to determine how effective a vaccine was. Over the next few weeks, Alex Muik and his only collaborator, Bianca Sanger, tried to improve the method and test it on a variety of devices at their disposal."*(p. 174)

At this point, the problem of dissolution is actually completely irrelevant, because you have taken a virus that is not dangerous for monkey (cells) anyway.

Finally, on page 175, I don't know whether to laugh or cry:

*"The antibody response stimulated by BioNTech's vaccine candidates was able to neutralize the potentially life-threatening infection in mice."*

After some thought I decided to laugh hysterically, why compromise when you can have both.

Mouse medicine is the most advanced medicine this planet knows. There are various drugs that can cure Alzheimer's, cancer and various other terrible diseases in mice, at

least that's what they say. Only... they don't work in humans. Ugur may have invented a new mouse drug, at least according to monkey cell culture!

I'm not sure if it would also work in mice, because you use monkey cells (p.174) and an ungulate virus, which in my opinion doesn't necessarily allow conclusions to be drawn about rodents and certainly not about humans. I will therefore slowly explain the species chaos that has been created here.

As a reminder: monkeys and humans differ genetically by about 1% (=99% identical), bananas and humans by about 50% (=50% identical). People and mice allegedly differ "only" 2.5%[\[64\]](#)(=97.5% identical).  $2.5\% - 1\% = 1.5\%$ . Mice are more different from apes than humans are from apes. So you conclude from the greater genetic difference between mouse and monkey that it will work in humans. I'm confused. Finally confused. And the hoofed animals are not included in this calculation. With my dusty math skills, that would be too many variables for me.

You take crude serum from MICE that have developed antibodies against a protein that infects HUMAN cells, dump it onto MONKEY CELLS, which you infect with an UNGULATE virus containing the HUMAN cell spike protein. And from this one concludes that the smurf substance will protect PEOPLE and not only mice or monkeys (which it does not protect because they cannot get Covid). Exactly. And again slowly!

**Monkeys are a poor model because they can't get human COVID, so monkey cells were used to test a modified ungulate virus on these monkey cells to show that mouse antibodies were minimal to 10 in monkeys, which would not get sick from it anyway would work badly.**

WTF?! HU???

To be honest, at this point I'm no longer sure in which species the miracle drug would even work.

*"It was just a small bulge in the curve, but it showed that an immune response was going on [...] These data did not yet indicate that the constructs developed by the Lightspeed team had elicited a T-cell response."*(p. 176)

An immune response was going on. A minor immune response was going on. But what kind of immune response was actually going on? I have absolutely no idea. And probably not the BioNTech "scientists" either.

If you don't feel like getting annoying substack mails, you can simply subscribe to my Telegram channel, where I include links to the articles.

[https://t.me/DrBines\\_verbales\\_Vitriol](https://t.me/DrBines_verbales_Vitriol)

There you will also find the episodes of this series, on which this chapter is based. I just hate to repeat myself.

...

## VI.

### Part 6 (quote):

"Chapter 6 is dark and I have a hard time being funny and meanly sarcastic here. If my hypothesis were correct, that would be bad, very bad. However, it is only a hypothesis based on literary traces that can certainly be refuted with other passages in the text. I really hope so in this case!

As one learns very quickly in "Introduction to Literary Studies" (because otherwise one gets bad grades), one has to argue in literary essays in such a way that one can continue to talk one's mouth off. You are not allowed to cover watertightly and shut up the others.

As you can imagine, my first literary homework in English, which was still heavily influenced by scientific arguments and scientific articles (the so-called papers), was not particularly well received. This was possibly also due to my refusal to use useless

adjectives and adverbs. In my opinion, these have no real informational value and only inflate the text unnecessarily. This might be useful if you don't have enough to say to get past the minimum word limit, but if you have the opposite problem, just cut them out so you can say more (that was more my problem).

As a natural scientist, I was a foreign body in English studies, who irritated everyone and was therefore greeted by the professors in the corridor in the first semester. Maybe I shouldn't have refuted her in her lectures with Nature and Science Papers in front of the whole class. It was still funny when I argued against the doctrine in the state exam and won because they couldn't refute me. The examiner from the office said goodbye to me with the words "Sincere condolences. You will not be happy at school."

I love intellectually dangerous, narrow paths, which we will also embark on in this chapter.

In contrast to the previous chapters, in which I could either rant about the content or fillet it with footnotes, in Chapter 6 we now move, for a change, in a classic text analysis for the most part.

In Chapter 6 we finally learn what happened to Ugur's first biotech gossip called "Ganymed" and why it had to be sold. This possibly traumatic experience of loss for Özlem, which made dreams burst, was, in addition to the foundation for BioNTech, perhaps one of the causes of the disaster of the planned plandemic. Ugur maybe wanted to save his wife from losing another "baby" and that would have been the case in 2023 if a miracle hadn't happened or hadn't been calculated and faked. only by whom?

The question of guilt is anything but easy to clarify on the basis of this chapter. They have made sure - if the worst comes to the worst - that everyone is included in the downfall.

I had already suspected in previous chapters that Ugur only brought up this mess and the trappings to save BioNTech. The company was in debt at the time of the action with 400 million euros! (p. 62)

This chapter contains further hints in this direction, which confirm my suspicions. A loving husband wanted to save the love of his life from another loss and was willing to sacrifice the lives of millions of other people to do so.

Heroic, isn't it? This is true love. He lays millions of lives at the feet of his loved ones. Like in ancient Rome.

Ugur's hero worship and complex is larger than just encompassing the Marvel Universe. Of course, a real nerd also loves Lord of the Rings. Unfortunately, I couldn't find any references to Star Trek in the book, which I found a bit disappointing. Star Trek is definitely part of being a full-fledged Big Bang Theory nerd.

Ugur does not identify with Golum, as one might intuitively assume (for whatever reason), but with Frodo. Which shoe size do you think Ugur has?

"Ugur, who never intended to start his own company, compared the mission to that of the hobbit Frodo Baggins in Lord of the Rings, one of his favorite fantasy films. Frodo did not choose to be the ring-bearer, he told Özlem, nor to be responsible for the ring's destruction, but was forced to take on that task." (p. 181)

Ugur a hero against his will with Özlem as Sam? Or is the author trying to tell us at this point between the lines that he actually didn't want to take part in this Covid scam? But that he was forced to do so by the circumstances and somehow, maybe in 2018 at a WHO meeting, got into it against his will? There is a photo from 2018 where you can admire him on stage with Tedros, Merkel and Gates[\[1\]\[2\]](#). What is he doing there? He was not listed anywhere on the program as a keynote speaker, as I was told by someone who knows someone who was there live at the time (and took illicit photos). He gave a lecture on RNA technology as a therapy for cancer patients and allegedly mentioned vaccinations in passing at the end, as I was told by this well-informed source. The mainstream media likes to use this term "well-informed sources" for their lies. If push came to shove, I might be able to get this source to testify in court. The source really exists! However, some scientists currently have to remain anonymous because they love their job at the university.

Fun fact on the side: Ugur's confession that he loves Lord of the Rings could have put him on the UK anti-terrorist list in 2023 because the British anti-terrorist program classifies Shakespeare, Tolkien, Huxley and Orwell as dangerous literature[\[3\]](#).

You can also see it positively, Jane Austen and Dickens are apparently still harmless. It's kind of funny though that the book by the brother of the great eugenicist Sir Julian Sorell Huxley now ends up on a blacklist along with the propagandist of Elizabeth I, who by the way was one of those who used copyright censorship[\[4\]](#)invented. Apparently she wasn't strict enough with Will for today's anti-terrorist literary troops, and back then they were still beheaded...

*"In the early years of Ganymede, Ugur and Özlem found the journey far less dangerous than that of the hobbit Frodo Baggins, their furry idol. Then, in 2007, the couple and their mentor, Austrian oncologist Christoph Huber, who had co-founded Ganymede six years earlier, found their backs to the wall. The start-up had several preclinical successes and, after two rounds of financing, was preparing for its first human clinical trial. But now Ganymede had to invest in expensive, large-scale studies, and money was tight. The Zurich-based venture capital firm Nextech, which had provided the seed capital for the company and is still its largest investor, wanted to exit the investment. The company had strict rules*

*"Biotech companies were born to die (emphasis mine): they either disappeared through acquisition or, much more commonly, through failure. Their other projects, codenamed NT (New Technologies), were too dear to the couple to suffer such a fate (emphasis mine). They could, Ugur believed, be financed with the sale of Ganymede and with grants from the federal government. It wouldn't be the kind of money that would allow the new company to launch a product within a few years, but NT could slowly but surely move forward without being disrupted by regular rounds of funding and presentations to fund managers. "(p. 185)*

*"They called it [the company, not the child] Ganymede, a name reminiscent of a Goethe poem and the Turkish word ganimet, meaning 'something hard won'." (p. 181)*

Here is a possible explanation why BioNTech is written with a big NT in the middle, the NT stands for "New Technologies" and offers many nice new ways to misspell the company name.

The company name "Ganymed" is not only reminiscent of a Goethe poem, it is the title of a Goethe poem.

*As in the morning light / You glow around me, / Springtime, beloved! / With a thousandfold bliss of love / Pressing against my heart / Your eternal warmth / Holy feeling / Infinite beauty!*

*That I want to take you / In this arm! / Alas, on your bosom / I lie, languishing, / And your flowers, your grass / Press against my heart. / You cool the burning / thirst in my bosom, / lovely morning wind! / Calls the nightingale / Loving me from the misty valley.*

*I'm coming, I'm coming! / To where? Ah, where to?*

*Up! You're striving up. / The clouds float / Downward, the clouds / Bend down to longing love. / To me! To me! / In your lap / Up! / Encompassing! / Up to your bosom, / All-loving father!*[\[5\]](#)

I hate poetry interpretation, especially when it comes to meter (which doesn't really exist here), an absolute school trauma. Therefore, I will NOT interpret the poem. To be honest, the linked interpretation doesn't really give much. Were it not for Ganymede as the title of the poem, at least the first part could be a despicable love tearjerker from a love-drunk drunk to his current life companion or a love poem to nature. The last stanza only makes it clear through the kidnapping described that this is not the case.

Ganymede was Zeus' cupbearer and formerly a shepherd boy of somewhat confused origins as to tradition, whom Zeus kidnapped because he fell in love with him or at least lusted after him. Here we have the motif of homosexual pedophilia including child abduction by the exclusive class of parasites that stylize themselves as gods. The parents are fobbed off with material assets (horses and a golden vine). Of course, all because the child was so beautiful and should live among the gods. The child was probably not asked. As a reward (or because Zeus got tired of him because maybe Ganymede did grow up after all?) Ganymede became a constellation, so disposed of without leaving a corpse.

Unlike biotech companies that are doomed to die, Ganymede became an immortal constellation.

That's what I call passion when naming this company: hard won, the most beautiful of the beautiful, loved and coveted by the gods and ultimately a constellation in the firmament.

It is also exciting that Ugur and Özlem, despite their passion, never got beyond the preclinical phase in their first company. So there is no experience with real clinical studies on humans from the previous company either.

Ganymede was forcibly sold to Astellas due to pressure from investor Nextech, who wanted their money back at a profit. And that against the will and desire of the founders, who were very attached to their first company baby. The sale of Ganymed hit Özlem particularly hard.

*“The transaction was bittersweet for Özlem. She had hoped to bring the therapy to market through an accelerated approval process, so that patients around the world could already benefit from it while a phase III study was still being conducted and without having to wait for it to be completed (emphasis added). to me). Instead, Özlem and her team went*

*through an elaborate handover process, at the end of which Astellas decided to conduct their own large-scale global studies, which would last up to and including the end of 2021.*

*However, after the sale of Ganymed, Özlem was able to join the board of BioNTech. With a number of deals in the pipeline, the principal investors wanted her to serve as chief medical officer on the board to advance the company's many diverse technologies into clinical trials. Özlem hesitated because she didn't want to go through the same thing as with Ganymede and "lose another baby" (emphasis mine)."(p. 194)*

Özlem had a big dream with Ganymede. Bringing such an ingenious drug onto the market that the world could be "blessed" while the clinical study was still in progress, without really conclusive data that would rule out long-term side effects. That sounds familiar to me somehow. When exactly was experimental gene therapy rolled out worldwide? During the ongoing phase III study, the data for which are not yet finally available to date (03/2023)? Has someone fulfilled a dream?

Astellas, the experienced buyers of Ganymed, first put the brakes on and brought the study into the calm, regulated, risk-optimized waters that were actually common in the pharmaceutical industry back then, in the pre-Corona period. Back then, when people were still trying to appear and preferred to have chronically ill patients rather than dead patients.

What actually became of this large-scale study that was supposed to last until 2021? Does anyone have a study number or info on whether it was another non-starter like everything Ugur has hatched so far? Unfortunately, the footer has been saved again at this point.

When founding BioNTech, Ugur was more cautious and had learned his lesson when it came to investors. He wanted to make sure his NT project wouldn't be sold under his butt again, breaking his wife's heart again.

"He would agree to a 'No Questions Asked' clause, meaning the brothers [Strüngmanns] would not interfere in the affairs of the company for at least the first few years and the trio would be free to go in any direction they wanted. At Ugur's request, and to show that they had long-term interests, Athos also agreed to waive the "right to force a sale" (my emphasis) until 2023 - giving BioNTech fifteen years of stability, headroom, most founders can only dream of." (p. 187)

This gallows period would have expired this year (2023) if Ugur had not been able to buy his way out of the investors with a big coup. Coincidence? Calculation? calculation? Did he buy his way out or otherwise pacify investors in some other way?

When it became clear that the couple would have to part ways with Ganymede, they already began looking for investors for their new project. First negotiations took place in the Villa Rothschild on page 189:

*"Back at the villa, the two paused under an oil painting showing some of the fathers and mothers of Germany's constitution as they gathered at this site after World War II to set the country on the path to renewal. Neither Ugur nor Jeggel, who had not yet got to know each other properly, dared to speak their thoughts out loud. Overwhelmed with emotion, they envisioned that one day another artwork might hang alongside, depicting the moment of BioNTech's birth (emphasis mine)."*

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX  
XXXXXXXXXXXXXXXXX? ...

(On the advice of my lawyer, some passages had to be blacked out and the associated footnotes deleted. Since Substack does not blacken, it had to be geixxt over it. Perhaps, when times are different at some point, there will be an uncensored version like Goethe's "Götz von Berlichingen". Although... it was still censored when I was at school, although everyone knew what it ultimately said.)

Although Ugur has taken care to preserve the independence of BioNTech as much as possible, or maybe because he has taken care, the company gets into first financial difficulties in 2013 and has to go begging again because they still haven't made it at least once to start a phase II study, as they had promised their investors. So, as usual, things are going really well for Ugur with his ingenious ideas.

*"But in 2013, five years after BioNTech was founded, the phase II studies that Ugur and Özlem had promised the Strüngmanns were still not in sight. Other pharmaceutical industry executives began urging Jeggel to withdraw funds provided by Athos; the company, one warned, would "just burn money." BioNTech's biggest competitors were about to overtake the Mainz scientists, at least that's how it seemed to outsiders. In March 2013, Anglo-Swedish pharmaceutical giant AstraZeneca announced an agreement with mRNA company Moderna that included an upfront payment of \$240 million. Months later, the biotech received an additional \$25 million from DARPA(emphasis mine), an offshoot of the US Department of Defense. In Europe, the German company CureVac had signed*

contracts with Johnson & Johnson (my emphasis), the French company Sanofi and the Gates Foundation (my emphasis). BioNTech's investors were dying to close similar deals. There simply wasn't enough money to fund everything from Ugur and Özlem's ideas to clinical application. Outside funding would soon be needed, and they wanted to know what their company's innovations were worth in the marketplace now. Ugur reluctantly agreed to Sean Marett sounding out the situation. [...] he signed the first cooperation agreement with Eli Lilly from Indianapolis in 2015. The American company agreed to invest a total of 60 million dollars, in return for licensing potential cancer immunotherapy drugs. Larger and increasingly lucrative deals followed with Danish company Genmab and then Sanofi. At Ugur's urging, however, 50:50 cooperations were concluded this time. BioNTech, Ugur insisted, would not give up its independence easily, and the board promptly rebuffed a number of banker takeover attempts. (emphasis mine)" (p.191) and the board promptly rejected a series of takeover attempts by bankers. (emphasis mine)" (p.191) and the board promptly rejected a series of takeover attempts by bankers. (emphasis mine)" (p.191)

Ugur's paranoia about maintaining BioNTech's independence is highlighted again here. Ugur also doesn't seem to have coped with the loss of Ganymed that well. He does everything to ensure that no one can talk into him again or sell the company under his butt. He begins to spin a spider's web of collaborations as a financial safety net.

*"But within weeks, BioNTech had begun negotiations with the most successful of all biotechnology companies, San Francisco-based Genentech, worshiped almost like a god in Silicon Valley circles. In September 2016, the company, which was acquired by Swiss firm F. Hoffmann-La Roche, agreed to make an upfront payment of \$310 million to secure an equal partnership with BioNTech. Despite his skepticism about collaborating with big pharma, Ugur saw this as an opportunity."*(p. 182)

In September 2017, according to page 197, there was another rain of money from Credit Suisse investors: "The balance sheet of this afternoon was \$270 million,[\[6\]](#) which BioNTech received in this "Series A", the first round of financing, which represented the sixth-largest amount for a biotech company in the world. With this money, it was possible for the company to build the production facilities in Mainz in which the crucial Covid 19 vaccine doses for the clinical studies were manufactured at the beginning of 2020. An even larger round of funding followed in July 2019, with BioNTech raising another \$325 million, mostly from previous backers. That was 61 percent of all investments in German biotech companies in 2019.[\[7\]](#)"

Let's sum it up roughly:

2007: 150 million euros - Strüngmanns and MIG (p. 185)

2008: Foundation of BioNTech (p. 189)

*"During this time, BioNTech deliberately remained more or less unknown. "We built the company according to our ideas, brick by brick," explains Ugur."*(p. 189)

2015: \$60 million – Eli Lilly (p. 191)

2016: \$310 million – Genentech (p. 192)

2016: 1.2 billion euros minus the share that went to the investors - Sale of Ganymede to Astellas

2017: \$270 million – Credit Suisse (p. 197)

2019: \$325 million (p. 198) – topped up by previous investors

2019: \$150 million IPO in NY (p. 199)

Back then, "Ugur and Özlem took their daughter out to Times Square to see their second baby's name (emphasis mine) light up."

How the daughter feels as a child 3? Somehow she was never counted, otherwise it would have to be called the third baby. The daughter would then probably be the sandwich child in the middle. Did she smurf? One would have to ask Ugur.

To be honest, I'm not in the mood for mathematics right now, because I still don't have the funding from the Gates Foundation, the money from the BMBF funding programs, and I would have to convert the dollars into euros at the exchange rate at the time.

That doesn't advance the storyline and doesn't change the fact that BioNTech was 400 million lousy at the time of the storyline. They burned a lot of coal and so far (2023) there is still no really safe and working product on the market, but the first complaints have been made[\[8th\]](#).

Incidentally, the author is wrong when he claims that "Unlike Moderna, BioNTech did not have extensive US government subsidies[\[9\]](#)"(p. 199). At that time, BioNTech did have funding from the BMBF, just not to the same extent (a total of 4.1 million euros).[\[10\]](#) But perhaps the author is not entirely wrong. The funding structures in Germany and the USA are different. As a US company, Moderna received public US funding and BioNTech was

financed by the state research funding of the Federal Ministry of Education and Research (BMBF) that is customary in Germany.

*“However, being in the glare of the stock market public also had disadvantages. BioNTech now had to update investors every three months on its progress, define goals and explain if and why it had missed them. Also, after the lackluster New York listing, the company had to raise additional cash to fund the development of its drugs.”(p. 199)*

The hunt for the money does not end even after the IPO BUT you now have investors on your back who really finally want results and, above all, you must not lie to the stock exchange supervisory authority, otherwise you will have a problem.

As it turns out, BioNTech also had more respect or fear of the US Securities and Exchange Commission than of the German citizen and his anger if the scam were to be exposed. In any case, one did not dare to lie to the stock exchange supervisory authority. So it admitted in its 2019 annual report that “mRNA therapies classified as gene therapy drugs”[\[11\]](#)[\[12\]](#) something that the German media and the Ehrlich Paul Institute vehemently denied and called a conspiracy theory. However, conspiracy theories are usually more entertaining than a stock market report. However, we already had the topic in a previous chapter: a beaver was christened “carp”, but it nevertheless remained a land mammal.

Fun fact on the side: Do you still remember the JP Morgan Healthcare Conference from Chapter 1? Guess who BioNTech's banker is? Exactly! JP Morgan (p. 198). So not the Sparkasse or Volksbank Mainz, in case you thought so.

After this digression into the past and prehistory of BioNTech and Ganymed, including annoying financial matters (biologists get pimples from big numbers and financial stuff), the historical digression goes back to the year 2014, when BioNTech started begging Pfizer for a cooperation (p. 200). For three years, Pfizer seems to have ignored BioNTech's advances, which inspires the author on page 200 to write a frustrated "Pfizer didn't seem like a well-coordinated company". How could this billion-dollar corporation dare to starve such a small Mainzer Klitsche on the long arm? Didn't they see the genius of the underlying ideas? They were soooooo mean at Pfizer.

In 2017, this attitude suddenly changes.

*“As Pfizer in November 2017(emphasis mine) at the Bio-Europe conference to meet with BioNTech, Kissel went there as well. But suddenly the company was pushing and was*

particularly interested in BioNTech's small but growing infectious disease pipeline.” (p. 201)

2017... there was something? Ever heard of the SPARS Papers or the infamous October 2017 SPARS Pandemic Scenario at the Johns Hopkins Center for Health Security?[\[13\]](#)?

The year 2017 is definitely just a coincidence and that Pfizer suddenly, a month after SPARS, was interested in BioNTech, waaaaaaaaaaaaanz definitely a coincidence.

The SPARS pdf has some really fun stuff in Chapter 19 "The Aftermath". "Health Authorities" were advised to admit their mistakes after the pandemic phase and to show empathy with the population damaged by vaccination and measures[\[14\]](#). In general, the SPARS exercise is about a very structured vaccination campaign in the context of a "coronavirus pandemic" from 2025-2028. A focus of the exercise was how to convince communities to be vaccinated.

There are coincidences.

Philipp Dormitzer suddenly wants to know "whether BioNTech was willing to work on the development of a new flu vaccine." (p. 201) Incidentally, this flu vaccine still doesn't exist and the modRNA flu vaccine from Moderna was a non-starter[\[15\]\[16\]\[17\]](#), as I explained in detail in my analysis of Chapter 5.

At this point, an interesting scientist also enters the stage of the drama on page 202:

*“Kathrin Jansen[\[18\]](#), a German-born microbiologist who led the development of the world’s first cervical cancer vaccine and was rewarded with leading Pfizer’s vaccine research department.”*

Coincidences again and again. Kathrinsche let out a completely different saying, for which she may be better known among those who refuse to use the mess: “We flew the plane while we were building it[\[19\]](#)“, exactly THE Kathrin Jansen. Since both Ugur and Katrin are "driven by science" (p. 203), a personal friendship develops between Ugur's and Katrin's family.

In July 2018, BioNTech signs the cooperation agreements with Pfizer (p. 203), which ultimately laid the foundation for the disaster that unfolded before our eyes from 2020 onwards.

On March 3, 2020 (p. 204), Ugur calls Katrin to maybe sort out the cooperation somehow through official channels: "On March 3, Ugur called Kathrin Jansen and asked for a

cooperation again. This time the reaction was markedly different. She cut him off even before he had finished his argument for expanding the alliance between BioNTech and Pfizer to develop a Covid-19 vaccine. "I said: 'Perfect' because mRNA meets all the criteria," she recalls. "I had no doubt that it was the right technology for the job." Basically, the company was on board."

Again, Ugur talks about mRNA instead of modRNA, although that was actually clarified in the previous chapters. It's really annoyingly inconsistent.

And again Ugur can't get enough of it. Rather than being happy that Pfizer is finally on board, here's a quote on page 206 from Ugurs himself: ""I was worried that partnering with Pfizer might slow down the project because risk-averse corporations want to see more data before moving on to the next pass the phase," says Uğur. "It was important to me to lay down ground rules, one of which was that if one party wants to move forward at any point, the other cannot stop it." Another rationale was that BioNTech wanted to maintain its independence, which Uğur and Özlem had fought for after the Ganymede experience and which had been made possible by the Strüngmanns. Unlike the flu vaccine, this should be a 50/50 deal, Uğur suggested. Here there would be no David and no Goliath. The companies would split the costs and potential profits equally."

The guy who has no idea about corona viruses, no idea about protein design, has never successfully completed a clinical study beyond the preclinical level, has no one in the company who would know about it, now sets rules so that nobody slows him down when he shit? Precisely because of such actions, this narrative thread of my substack is called [Irony]Once working with professionals [/Irony]

***"If the two companies were successful, there would be more than enough profit for everyone. If they failed, they would have bigger problems than their bank balance. Then the world would be in serious trouble."*(p. 206)**

Then the world would be in serious trouble... Take a deep breath... ohmmmmm... I'll save EVERYTHING I could say about this at this point. On the advice of my lawyer, I would most likely have to black out that anyway because of potential claims of insult. And since the Substack unfortunately has a certain readership, especially in legal circles, it's over with some malicious things that you would have let off at this point in a small, private circle.

Instead, just read some of the verses that Shakespeare Theresites imputed in "Troilus and Cressida" as a substitute and supplement to the Goethe poem at the beginning of the

sustack. Shakespeare is definitely funnier than Goethe, which is why he's blacklisted by the UK Counter-Terrorism Unit and not Goethe.

*"The Greek pestilence, you mutt-like, cow-stupid lord!" [...] "They called you out as a fool, I think." [...] "Mars' stupid oaf! – Go ahead, ruffian; go ahead, camel; always closed!" [...] "Oho, oho! What small doses of wit he spouts! His failures have ears so long. I got more his brains than he smashed my bones. I can buy nine sparrows for a farthing, and his pia mater is not worth a sparrow's ninth part. That lord, Achilles--the Ajax who has his wits in his stomach and his tripe in his head--I'll tell you what I think of him.[\[20\]](#)"*

To be fair, there are several ways of saying, "If you failed, you'd have bigger problems than your bank balance." Then the world would be in serious trouble." to be interpreted depending on the angle or frame.

A) From the perspective of a witness to Corona:

1. The vaccine turns out to be useless snake oil. People are still dying from the virus.
2. The vaccine turns out to be not very good and only protects a few at least from severe courses. Still, a lot of people die.

B) From the point of view of an evil cross-soundrel:

3. The vaccine proves useless and harmful, more people die than from the virus, which is already the case (03/2023)
4. The vaccine turns out to be useless and harmful. A great many people die, but not enough to escape the revenge of the survivors.
5. The vaccine turns out to be useless and harmful. People don't die from it, but so many are so severely damaged that they sue BioNTech and Pfizer for the rest of their lives and ruin both companies, their investors and the global stock markets including the financial system and entire countries.

*"Reuters soon got wind of the talks in New York and informed the world public, including BioNTech's strategic partnership and licensing officer, Roshni Bhakta."(p. 207)*

Another example of Ugur's "highly professional" approach, because this Reuters article once again describes going it alone (as with the design of the Smurf spike, the decision to continue despite warnings...). When the contract department finds out via the news that

they have allegedly concluded contracts that they know nothing about, it certainly “sweetens” your day as a head of department! I am guessing the press release quoted on page 177 (which of course has no attribution) is this March 13, 2020 announcement “Pfizer Outlines Five-Point Plan to Battle COVID-19[21]”.

*“Once the relationship was solidified, the agreement with Fosun took off. It was negotiated by Ryan Richardson and Uğur with little input from BioNTech's corporate development team. The agreement was much more straightforward, essentially a license agreement. There were no intellectual property or technology transfer concerns. Fosun was supposed to help BioNTech conduct clinical trials in China, but the German company would manufacture the country's vaccine at its European plants and ship it to Asia.*

*On Monday, March 16, BioNTech announced a "strategic alliance" with Fosun under which the company would pay up to \$135 million for the right to commercialize the product in China, Hong Kong, Taiwan and Macau. The press release also served as a public announcement of the existence of "Project Lightspeed". The venture had been kept secret for seven weeks while dozens of pharmaceutical companies announced their intentions to develop a vaccine against the coronavirus far and wide.* [22]"(p. 209)

Oddly enough, the Chinese themselves did not want to use the BioNTech smurf substance in their own population[23]. They paid 135 million dollars for a marketing right, only to not make use of it and even refuse to use it. Did they maybe make sure with the marketing rights that the modRNA stuff can't be offered by anyone in their country because they have the rights? Kinda weird. You should look into what happened there, especially if you put it in the words of ntv: China declares Biontech vaccination to be a lethal injection.[24]

Even stranger, if true, what Melissa McAtee (née Strickler), Project Veritas' Pfizer whistleblower[25], told Stew Peters about the US production of the smurf stuff: The substances came in bags labeled in Chinese[26].

All the madness that was to take place in the period that followed is surprisingly skilfully summed up in a few words on p. 211. There is nothing to add.

*"There was also a lot of abuse that Perrineau couldn't catch. BioNTech's switchboard was harassed by angry callers. "How does it feel to work for a company that is poisoning the world?" one wanted to know. Then there were the usual suspects who claimed Uğur and Özlem were working with Bill Gates to microchip unsuspecting patients. And bizarre as it was, there were also some troublemakers who seemed unconcerned about the vaccine's*

*safety. Some of them showed up at the BioNTech front gate, rolled up their sleeves and demanded to be vaccinated against Covid-19."*

After reading up to this point, it's almost as if Pfizer had been ripped off by BioNTech. They didn't really know what they were getting themselves into. The smaller partner was to blame. To be on the safe side, they put a stop to this on page 212 in case Pfizer wants to wriggle out:

*"Some Pfizer scientists were doing research on RNA in California, and while there was no indication that the US giant had any malicious intent, it could always claim that it had built similar expertise independently of BioNTech and based it on the Molecule developed its own drugs."*

So both sides know that they are moving in a minefield that can blow up really badly in their faces. However, the prospective profit margins blind them. It's hard to tell who ridden whom in here, reading passages like page 213:

*"One example was the cost of patented vaccine components. Pfizer agreed to cover its prospective partner for that eventuality. The contract also contained mechanisms to protect BioNTech from a total demise(emphasis mine). However, the company tried to use this generosity as bargaining chips as issue after issue was discussed, from sharing liability (emphasis mine) to where each company's name would appear on the vials."*

I would really like to see the deals between BioNTech and Pfizer. Dear attorneys, I know you are reading this substack. Fancy a FOIA on Ask the State?

I'm only asking for 18 million unsmurfed friends.

Now, March 2023, with Pfizer's clinical trials scam churning in the system media and bursting caustic bubbles in the swamp, passages like these have a certain poignancy, I would guess:

*"Roshni Bhakta had wrestled with her colleagues at Pfizer for the final say on several key decisions: from selecting the final clinical trial candidate, to scheduling corresponding global trials, to how and where the vaccine would be manufactured should. A table was created and each potential conflict discussed in detail."(p. 214)*

*"BioNTech should take the lead on issues of mRNA technology and clinical trials in Europe, 'and that's where we should make the decisions'. For other issues like the Phase III trial, either Pfizer alone or Pfizer and BioNTech should decide together. If necessary,*

*the rights as product owners, which had already been granted to BioNTech in the negotiations, should be exercised jointly.”(p. 215)*

Who actually has the "final selection of the final candidate for clinical trials" in favor of Ventavia[27]met? Who is in charge of Trial Side 4444[28]? I have already worked on these topics in detail in previous substacks.

In Phase III, who made the decisions to suppress data and ignore danger signals[29]? Pfizer or Özlem and Ugur, who wanted to keep their dream of a drug that is already in phase III use worldwide?

*"The rights should be exercised together",* Does this also apply to the obligations or the payment of damages?

questions upon questions.

If you are still in a bad mood and have nightmares, you are welcome to subscribe to this substack.

If you don't feel like getting annoying emails (I only read mine twice a week), you can simply subscribe to my telegram channel [https://t.me/DrBines\\_verbales\\_Vitriol](https://t.me/DrBines_verbales_Vitriol), where I also include the links to the texts.

**vii**

The contact details of the experts Dr.Sabine C. Stebel from Freiburg can be submitted at any time if you are at all interested in an appropriate processing of the machinations of those responsible at the PEI and the company BioNTech SE.

So, even mere pre-biological knowledge should have discouraged any responsible doctor from administering these modRNA injections to the people.

A medical layman can certainly only be taken for a fool. But only medical laypeople work at the PEI who - despite countless warning signals from all over the world - have not yet understood that these Covid-19 injections are questionable medicines, the further use of which would have been prohibited by February / March 2021 (!) at the latest must?

See also:

<https://tkp.at/2023/02/19/wann-genau-haetten-cdc-fda-und-pei-gegen-die-covid-impfstoffe-einwandern-muessen/>

Everyone should know all of this before they once again sing the praises of this company's supposed "saviors of mankind".

**c)**

The series of enlightening publications on the machinations of BioNTech-Pfizer continues.

In an article by Dieter Quartz on [alschner-klartext.de](https://alschner-klartext.de) dated March 15, 2023 with the title "SPOTS ON THE CLEAR WAISTCOAT? COVID-19 PHARMACEUTICAL AUTHORIZATION À LA PFIZER – WHAT DOES NOT FIT WILL BE MADE FIT!" it says introductory (quote, bold emphasis in the text added by me):

"Doubts about the safety of experimental injections of genetic material called "vaccines" have never been dispelled. The so-called western blot analysis plays an essential role in the evaluation of this "consumer safety". A science scandal was traced back to Mainz at the end of the 1990s. Ironically, this is where BioNTech is based. The blot analysis could now have made the stains on the previously legally white coats of those responsible visible in this scandal as well.

COVID-19 PHARMACEUTICAL AUTHORIZATION À LA PFIZER – WHAT DOES NOT FIT WILL BE MADE FIT!

#Blotgate, a new level of premeditated fraud

**By Dieter Quartz**

With the inflationary flood of reports on criminal activities in the context of the production and use of experimental gene therapy injections with the recombinant genetically engineered Covid-19 active ingredients ("SARS-CoV-2 or corona vaccination", see [A]), is a notable article [1] by investigative UK journalist Sonja Eljha [2] almost disappeared. The meticulous research results of the former BBC researcher could well have the potential to be a game changer in the legal processing and conviction of those responsible for what is probably the biggest scientific fraud and medical scandal in human history. This publication by Eljha is discussed in detail and expertly reviewed under the keyword #blotgate in relevant specialist circles [3].

Eljha had already made enormous contributions to the analysis of the leaked Pfizer documents and correspondence in connection with the telescoped clinical trial phases [4]. She carried out exactly those tests that are actually intended for the specialist departments of the approval authorities at the EMA (European Medicines Agency) and FDA (US Food and Drug Administration). According to the current state of knowledge, these authorities have the BfARM (Federal Institute for Drugs and Medical Devices), PEI (Paul Ehrlich Institute) and IQWiG (Institute for Quality and Efficiency in Health Care), as well as the Peer review processes in the relevant scientific journals [5] have totally failed across the board. Such a structural failure can neither be explained by negligence nor by chance, but probably only by deliberate intentional collusion to fraud. This is by no means surprising given the entry into the age of dependence on third-party funds and the ominous public-private

partnership. These fundamental changes in previously independent and tax-funded research have turned the once largely neutral and objective scientific institutions into institutes for contract research, industrial corruption and courtesy reports. This also made it possible for the pharmaceutical industry to essentially finance those regulatory authorities that are actually supposed to control it [6]. At the EMA they even managed to immediately prior to the issuance of the first conditional Covid-19 drug approval in December 2020, to place a pharmaceutical lobbyist (Emer Cooke) as President of this institution in November 2020 [7]. A rogue who thinks evil about it.

## **Background: what is it about?**

A brief recapitulation of what has been determined so far makes it easier to understand the complex molecular-biological instrumental analytical relationships on which Elijah's new investigation results are based.

Already in January 2021, the cell biologist Dr. Vanessa Schmidt-Krüger analyzed the EMA Open Assessment Report on Corminaty (the Pfizer/BioNTech Covid-19 gene therapy "vaccine") [8, 34]. A key point of their criticism concerned the complete ambiguity of the end product composition from large-scale industrial production, which the EMA inspectors had also noticed. The decisive factor was the finding that, in contrast to the documentation of the modRNA integrity (a purity measure that indicates how much completely intact modRNA is contained in the samples) in the laboratory scale in the clinical studies was 78%, in contrast to 55% in industrial mass production. The intact modRNA is characterized by an initial so-called 5' cap structure, the coding nucleotide sequence for the protein to be translated (in this case the SARS-CoV-2 spike protein) and a so-called final 3' poly-A tail. In addition, the original SARS-CoV-2 mRNA (messenger RNA [9]) in the active substance (tozinameran) by Comirnaty was modified by replacing the nucleobase uracil with pseudouridine (therefore modRNA [10]) in order to reduce reactogenicity. A membrane-bound anchor protein is added to the coding sequence, which prevents the formation of free cardiovascular circulating spike proteins, and a lock protein (2P lock) is inserted, which should prevent the cleavage (at the so-called furin cleavage site) and opening of the binding sites of the S1 subunit [11]. Both of the latter modifications have now turned out to be ineffective, so that the freely circulating spike proteins from the Pfizer poison cocktail can fully develop their well-known toxic properties in the organism. The reduced modRNA integrity criticized by the EMA auditors entails an enormous risk potential for patients. A differentiated analysis of the brew from the Pfizer pharmacy boilers revealed fragmented (so-called truncated sa [1(a), 3] #humpgate) modRNA, of which nobody knows what foreign proteins it may express. Also included were residual components of linearized DNA and various enzymes from the modRNA synthesis process, as well as other microbiological impurities. The reduced modRNA integrity criticized by the EMA auditors entails an enormous risk potential for patients. A differentiated analysis of the brew from the Pfizer pharmacy boilers revealed fragmented (so-called truncated sa [1(a), 3] #humpgate) modRNA, of which nobody knows what foreign proteins it may express. Also included were residual components of linearized DNA and various enzymes from the modRNA synthesis process, as well as other microbiological impurities. The reduced modRNA integrity criticized by the EMA auditors entails an enormous risk potential for patients. A differentiated analysis of the brew from the Pfizer pharmacy boilers revealed fragmented (so-called truncated sa [1(a), 3] #humpgate) modRNA, of which nobody knows what foreign proteins it may express. Also included were residual components of linearized DNA and various enzymes from the modRNA synthesis process, as well as other microbiological impurities.

It is also questionable to what extent the minimized active ingredient content can still achieve the postulated effect (immune reaction and antibody formation). After all, the EMA examiners asked a key question that should have been answered conclusively in the approval documents in advance. In this respect, the experimentally documented proof requested by the EMA for end product verification, including through so-called Western blot analysis [12], is of essential importance for consumer safety.

The fact that there is a significant, unacceptable benefit-risk ratio for the Covid-19 gene therapy injections was proven at the latest with the disclosure of the study results from the clinical trial phases. How Pfizer tricked and deceived there was revealed on the one hand by a whistleblower ([Brook Jackson\) who has served as study coordinator of the clinical trial phases for a subcontractor \(Ventavia\)](#).[13], on the other hand, the study manipulations were made possible by viewing internal Pfizer documents,[by court-ordered exposure in the United States](#), after Pfizer had tried in vain to prevent access to the records for more than 70 years. Sonja Elijah and Dr. It is thanks to Naomi Wolf, a renowned writer, political activist and former Clinton adviser, that the content of the first 55,000-page installment [14] could be made available to the public [15]. All in all, the approval authorities were littered with no less than 400,000 pages of application documents from Pfizer [16]. One had probably hoped to tie up the authorities with this bundle of attachments on the one hand and thus enable the misuse of the substances for the time being, as well as to hide the crucial data falsifications in them and prevent their discovery. This strategy has so far worked for the registration authorities. However, the pharmaceutical fraudsters significantly underestimated the meticulousness and perseverance of the critical scientists and investigative journalists. The summary of the document review concerns inadmissible unblinding and arbitrary exclusion of study participants, which in the statistical evaluation to be corrected (which was never carried out) proves a complete failure of the active substance [17], which was later confirmed in practice with exploding incidence values and hospitalization rates of "vaccinated" [18], hushed-up deaths and serious side effects, unqualified study staff in the care of test subjects, improper relocation, formal errors, etc. And the approval authority (FDA) involved actively supported it. An unbelievable chain of failure from a scientific point of view, on the other hand, an almost perfect interplay of organized crime. Interestingly, in an annual report from March 2022 to the US Securities and Exchange Commission (SEC), Pfizer reveals its knowledge of the previously described deficiencies of the preparation to be tested and the consequences of its use. There, in the subjunctive, the financial market and investors are informed that the safety and effectiveness of the Covid-19 drug may not be proven [19]. Instead of the 400,000 pages of application documents, the approval authorities would only have had to read the few pages of the SEC annual report in order to temporarily suspend the approval process. until the necessary verifiable experimental and clinical benefit-risk evidence had been finally presented by Pfizer. Instead, an application of active ingredients to billions of ignorant test subjects was authorized, intentionally violating the duty of care and supervision for consumer protection. The fact that the extent of the damage was not even greater can be related to a possible further perversion of the pharmaceutical mafia activities. When assigning the SAE (Serious Adverse Event) to the active substance batches, it was particularly noticeable that only some of them were particularly harmful [20], while others sometimes showed no reactions at all, not even locally at the injection site. It would therefore be quite conceivable that the manufacturers, knowing about the enormous risk potential and the consequential damage that could then be seen, delivered batches of placebo (e.g. with isotonic saline solution), with which they were also able to rake in further enormous profits through the higher margins compared to the much more expensive verum preparation [21]. In addition, it is completely unclear for the composition of the final administration of active ingredients to the patient that in the supply chain practice, compliance with the low-temperature cold chain (-80°C!) from the manufacturer to the

pharmaceutical wholesaler, to the pharmacies to the executing doctor, especially in the summer months [22]. Also grossly negligent for the entire development process was the ignoring of the warnings by the pioneers and inventors of mRNA drug technology, Dr. Robert Malone and Dr. Luigi Warren that this pharmacological application in humans is not yet fully developed [23]. As if all of this wasn't incomprehensible enough, consumer protection was also almost completely undermined by law through the clandestine introduction of the Medical Needs Supply Assurance Ordinance (MedBVS), which was only enacted for the Covid-19 active ingredients and eliminated numerous essential quality assurance requirements of the AMG [24].

### **The importance of the EMA intervention**

On the basis of these findings, the mixture of active ingredients can definitely be described as a haematological bioweapon [26] in the context of the collateral damage [25], which has meanwhile been adequately documented, or as a genocide cocktail due to the mass use that has meanwhile taken place.

...

#### **All quality assurance standards disregarded**

With the Pfizer/BioNTech Covid-19 active ingredient, the regulatory authorities have disregarded all gold standards of quality assurance that have been established for decades and simply waved the approval through, despite the unacceptable product risks. The manufacturers were given until mid-2021 to submit the corrective measures later, ie the injection campaign was officially authorized to begin before the quality assurance measures were even ensured. In addition, the three most important regulatory authorities worldwide (FDA, MHRA {UK Medicines and Healthcare products Regulatory Agency}, EMA) had already agreed to coordinate a common date for the conditional or emergency approval, which is foreseeable in any case before the final one product certification lay as internal emails from high-ranking officials that have since been leaked show [35]. No wonder that those who have been injected ("vaccinated") are literally executed in gene therapy (or by contaminated batches) or experience serious side effects, as the pharmacovigilance data (even with enormous underrecording and considerable delay in reporting!) clearly document [36]..." ( Quote end)

Please read this article in its entirety.

On critical portals such as tkp.at or corona-blog.net you will find more relevant information than you could wish for in order to promptly initiate investigations against those responsible at STIKO, the PEI, the companies BioNTech and Pfizer and also work towards Jens Spahn and Karl Lauterbach.

There is so much more that could be said.

For example, the PEI published an article on the effects of spike proteins in March 2021 at the following URL:

<https://www.pei.de/DE/newsroom/pm/year/2021/03-web-shaeden-cell-fusion-covid-19-rolle-spikeprotein.html>

The most striking statements are (quote):

**"Even the smallest amounts of the spike protein are sufficient in cell culture to cause infected and uninfected cells to fuse and die."**

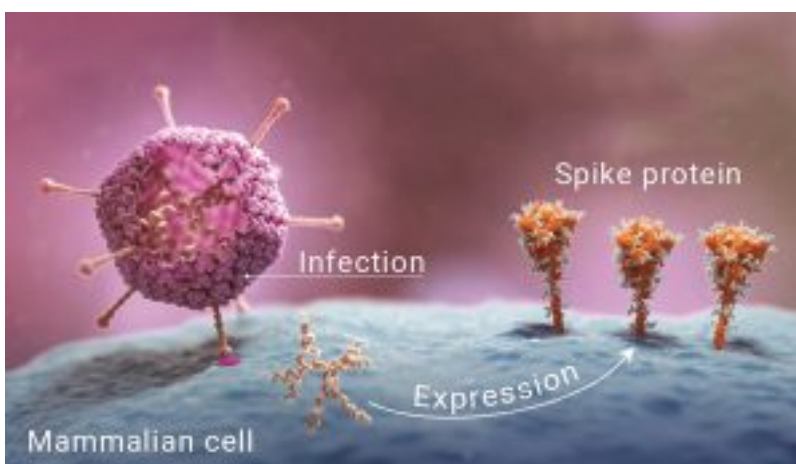

"Important finding: That SARS-CoV-2 spike protein is extremely fusion-active: Even the smallest, barely detectable amounts of the spike protein on the cell surface are sufficient to initiate cell fusion and thus cell death. But the spike protein can do even more: it is sufficient for virus particles to come into contact with each other, which SARS-CoV-2 spike protein on their surface, with human cells from fusing with each other. The fusion can mean death for the affected cells. This one as "fusion-from-without" process underlines the enormous membrane fusion activity of the spike protein. Since the Covid-19 injections cause mass production of spike proteins, this treatment consequently also causes cell death on a massive scale."

Does this effect not correspond exactly to the organ damage of people injured by Covid-19 injections, which the pathologist Prof. Dr. Arne Burkhardt has been pointing out for years?

And the spikes formed are obviously identical to the original spike protein of the Sars-CoV2 virus.

An article on sciencexx from April 8, 2021 about the AstraZeneca vaccine AZD1222 says, among other things (quote):

"The aim of all corona vaccines is to strengthen our immune system with the [spike protein](#) to become familiar with SARS-CoV-2. Because then it forms suitable antibodies and T cells against this virus protein. If an infection with the coronavirus then occurs, it is neutralized before it can multiply in our cells. [mRNA vaccines](#) achieve this effect by injecting the building instructions for the spike protein into the cells as messenger RNA. Vector vaccines like [Sputnik-V](#), [AstraZeneca](#) or Johnson&Johnson use a harmless carrier virus to bring the genetic code into our cells.

Principle of vector vaccines: The carrier virus enters the cell and releases the building instructions for the spike protein. The cell then makes this protein and presents it on its surface. © University of Southampton

What all vaccines have in common, however, is that our cells then produce the viral spike protein and present it on their cell surface - this gives the immune system the incentive to remember this protein.

### Targeting vaccine proteins

But how well does this principle work? And how perfectly do our cells mimic the viral protein? Yasunori Watanabe from the University of Southampton and his colleagues have now investigated this using the example of the AstraZeneca vaccine AZD1222. What is important here is how well the vaccine proteins reproduce the viral protein structure, but also whether the sugar deposits typical of this protein match - because these glycans are also a recognition feature for the antibodies.

For their study, the researchers vaccinated various human cell cultures with the vaccine viruses of this vaccine. After these cells had then read the assembly instructions and formed the first viral proteins, they used antibody tests and high-resolution images of cryo-electron microscopy to check how well the viral model and cellular vaccine product matched.

### "Prickly" cells and structure to match

The result: around 60 to 70 percent of all cells in the inoculated culture showed the typical prickly spike proteins on their cell surface after a short time, as the images show. "They revealed that the surface of these cells is densely covered with protruding structures whose shape and size match the conformation of the SARS-CoV-2 spike protein," report Watanabe and his colleagues.

The structure of these cell-produced spike proteins corresponds to that shown by the virus before attachment to the cell. Tests with different antibodies also showed that both the binding site and the three-part "head" of the protein and the stalk region correspond to the original - at least so well that the antibodies successfully bound to it, as the team reports." (end of quote)

Sources:

<https://www.scinexx.de/news/medizin/corona-erster-blick-auf-impfproteine/>

<https://pubs.acs.org/doi/10.1021/acscentsci.1c00080>

**The PEI was thus demonstrably aware of the mode of action of the spikes as early as March 2021, so that the urgent suspicion is justified that those responsible at the PEI intentionally caused mass cell death in everyone who received a Covid-19 injection and thus ultimately also the have accepted the damage to health caused by this up to and including death.**

By the way, do you know the series of articles "Der Karlatan" on Lauterbach? Highly recommended, see (with link to the first 4 parts):

<https://www.background.de/politik/inland/der-karlstan-Folge-5/>

In any case, it is only a matter of time before the first victims of vaccinations will go as far as the enforcement proceedings as “injured” and joint plaintiffs, so that all criminal aspects of this complex can finally be processed.

Sincerely

Schmitz
